F Highly Connected Missing Works

The following table shows work currently not considered which are highly connected to the survey, but which do not have a high enough relevance to be included automatically. The top 50 entries are shown. Some of these work may be background material cited by many works in the survey, or we might be missing some concepts to show that they are relevant to the survey topic.

G Excluded Missing Works

The following entries have not been included, as they are of the wrong type or are incomplete. Some of these might be highly relevant, but they will need some manual work to be included in the survey.

H Missing DOI

The following works do not have a DOI entry in their bib entry. This might be due to an non-standard or defunct publisher, but for many works a DOI should exist. It would be helpful to add these to the bib entries, so that the OpenCitation and Crossref lookup procedures can report the appropriate numbers for citations and references.
