CP Conference

Helmut Simonis

2026-01-15

1 Introduction

This document shows the result of a survey on the proceedings of the "CP Conference" in the period from 2010 to 2025, which tries to find and classify all publications from this conference. It is based on a manually collected bibfile from DBLP containing reference to relevant papers and articles, and on an automatic and manual analysis of local copies of the cited papers. For the CP conference, some accepted submissions in 2015 and 2016 were directly published in the Constraints Journal, they do not appear in the proceedings of the conference. These articles were manually added to the bib file, they show "Constraints" as source in the tables.

We use the DBLP bib item key to identify the submissions, removing the conference prefix. The key consists of the last name of the first author, the first character of the last name of all other co-authors, and a two digit year code. Accents and umlauts are removed, in some cases DBLP uses a different key, we follow their usage.

Most of the content of this document is generated by a Java program that parses the bib files, adds any manually extracted information, and which then extracts concept occurrences from the local copies of the works. It then produces tables and other LaTeX artifacts that are included in a manually defined top-level document.

To add new works, first add bibtex entries for each work in the main `./imports/cpconference.bib` file, then add local copies of the pdf of the work to the `./works/` directory, using the key of the bibtex entry as the file name (plus extension .pdf), and then run the main Java program `org.insightcentre.pthg24.JfxApp` to consolidate the information and extract the relevant concepts. Finally, run `lualatex` on the `./cpconference.tex` file to produce this pdf document. Manually extracted information for the files can be added in the `./imports/manual.csv` file. New concepts can be added in the file `./imports/concepts.json`. The information about paper sub-types, tracks, awards, and links to extended versions are in the file `./imports/subtypes.json`.

We start the document by providing a table of all defined keys in the bib file in alphabetical order. This table can be helpful to see if a candidate paper is already in the survey, it suffices to see if the key is already present, and matches the authors, title and origin of the candidate paper. In the table the hyper-link given by the key points to the local copy of the file, while the citation number links to the bibliography entry. That entry typically also contains a link to the original source of the paper.

This document heavily depends on the use of hyper links in the document, it has been tested with Acrobat Reader, other pdf reader may not use links in the same way. If you read the on-line version of the document, the links to the local files will not be active.

In the keylist, a star after the paper key indicates an award, the award types recognised will be explained in more detail later on.

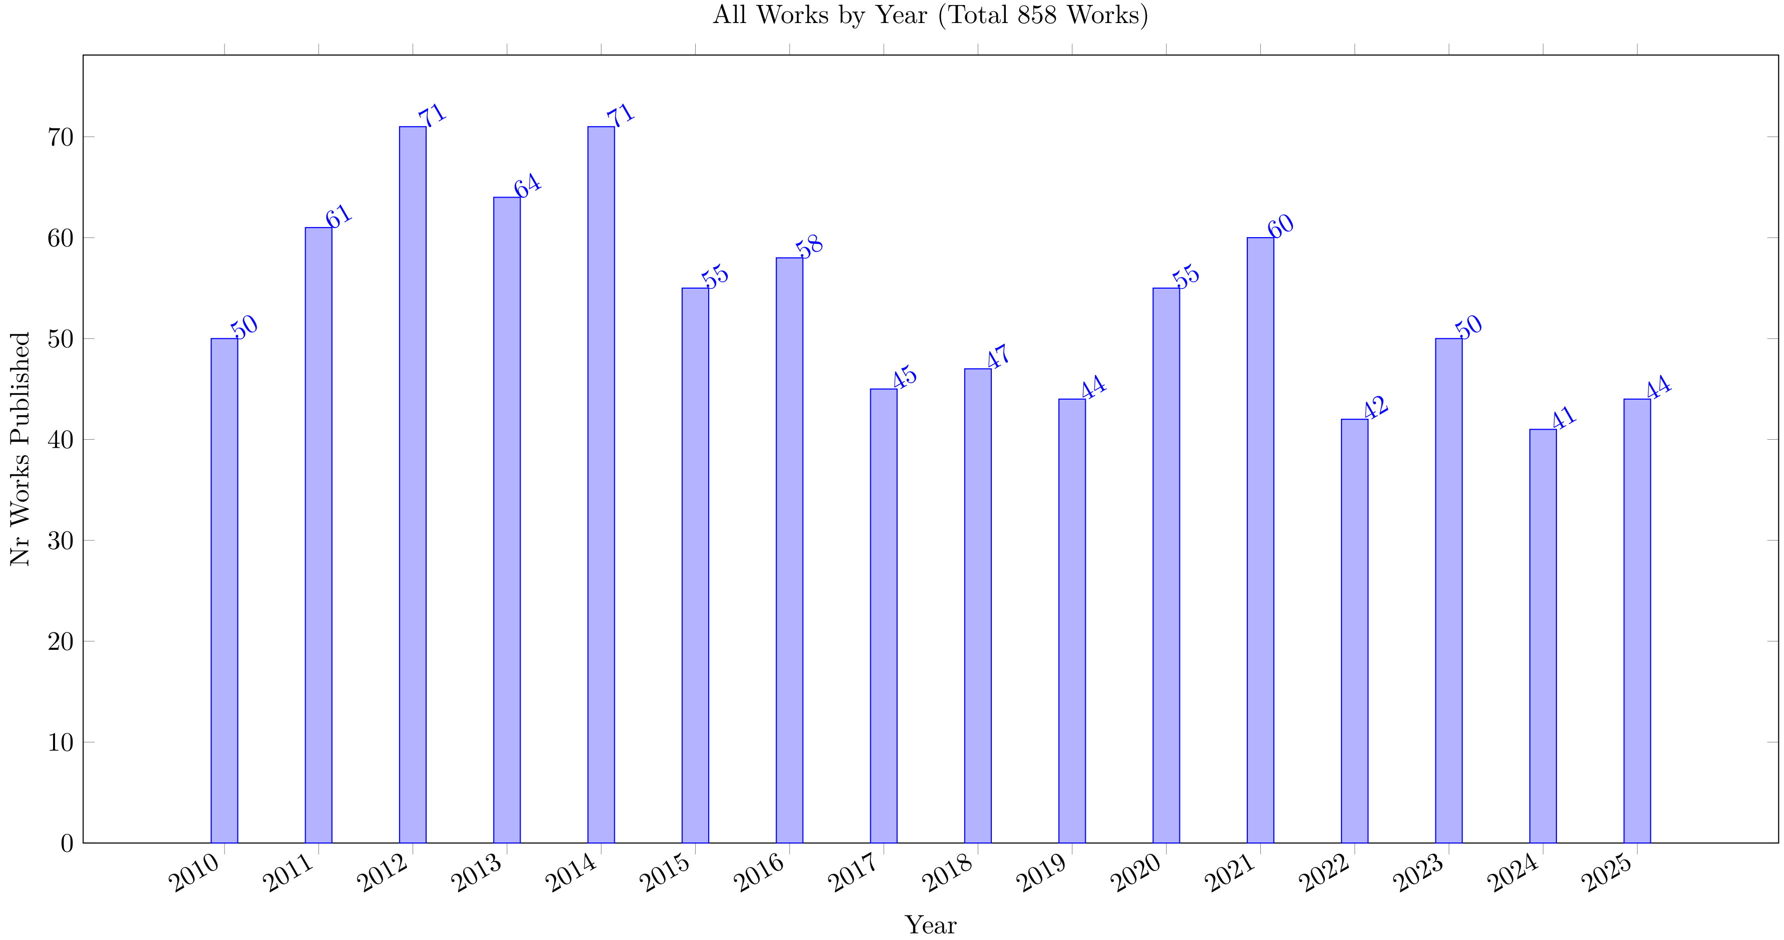
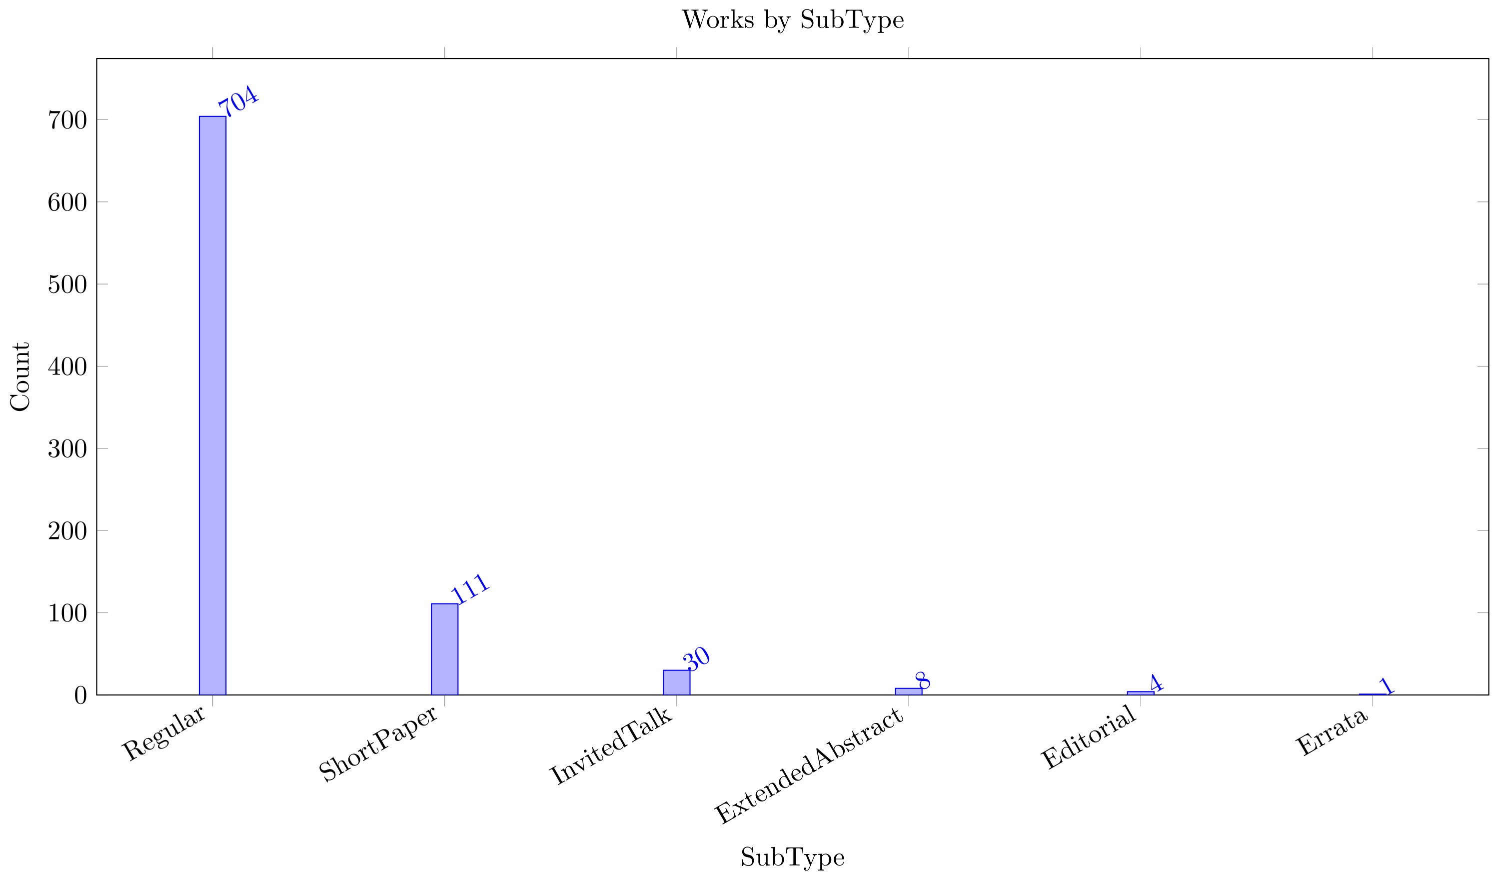
2 Analytics

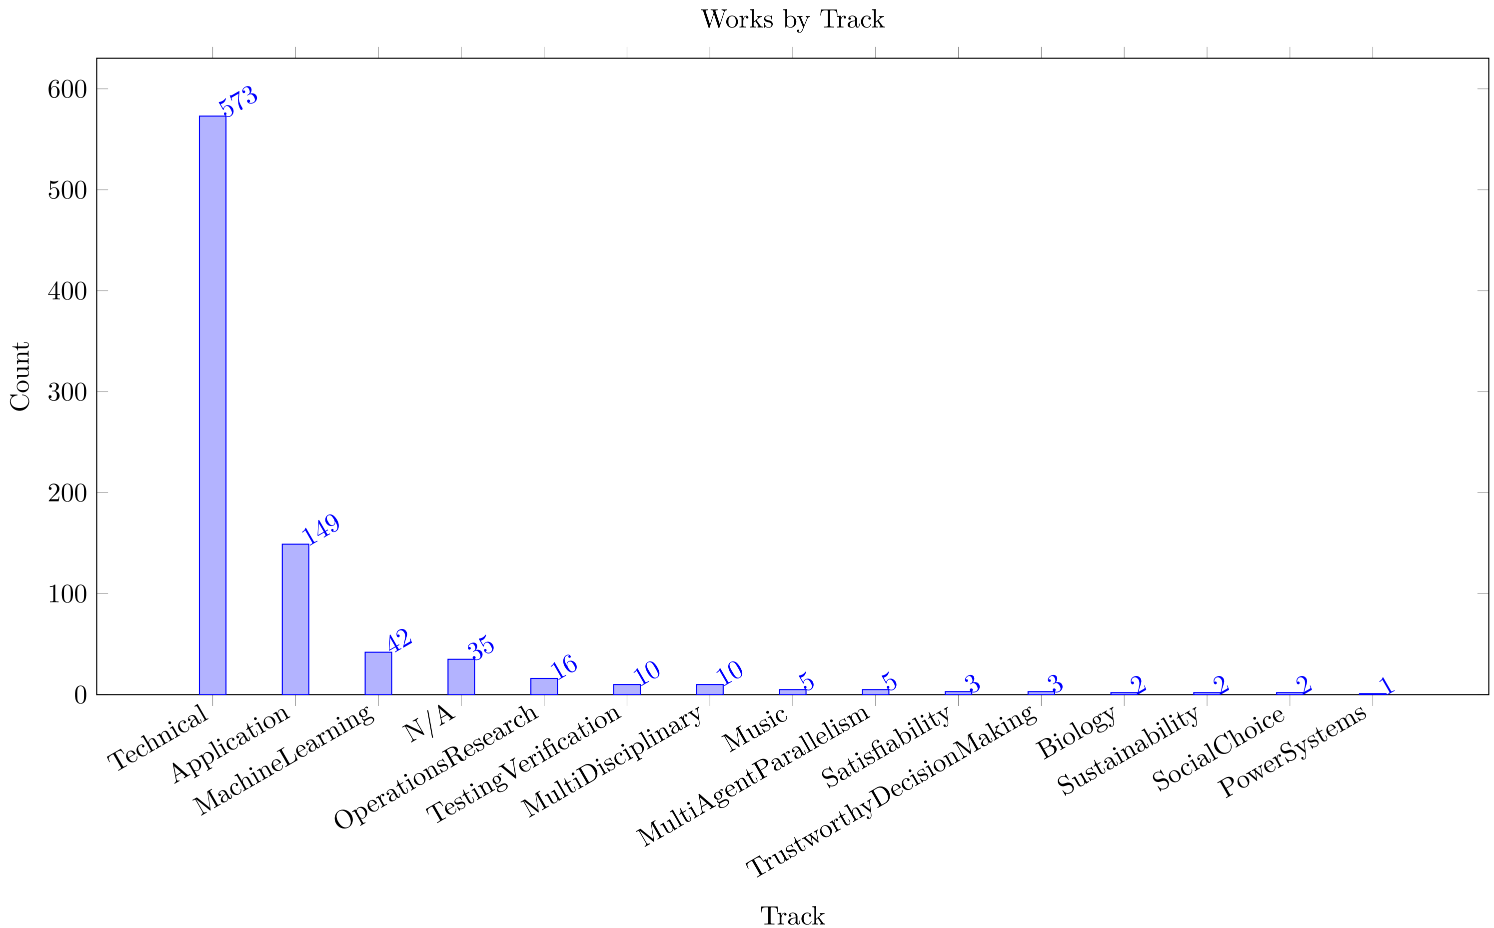
This section provides some analytics of the complete dataset. The first plot shows the evolution of the number of works published over time. There is a high variation of the number of papers per year, some of this can be explained by the location and/or time of the conference, other factors are the number of types of special tracks, acceptance of short papers, etc.



The next plot shows the distribution of papers by sub-type. The majority are regular submissions, which for the conference typically is 15 pages, now typically allowing additional pages for references and a technical appendix.



We also show the distribution of papers by track. Which tracks are present in which year depends very much on the conference chair, this varies a lot from one year to the next. Some papers of specific sub types (e.g. invited talks, editorials) are not assigned to any track, they are shown as belonging to the "N/A" track. For the other papers, we follow either the track assignment in the proceedings, or, if that is not present, we extract the tracks from the conference program on the ACP website. This means that multiple papers are subjectively misclassified, e.g. application papers are assigned to the Technical track. We do not attempt to fix this manually.



The following Figure shows the origin of the articles by country, based on affiliation data in the Scopus meta-data. A work is counted for one country, if at least one author has an affiliation from that country at the time of publication. An article with authors from different countries will be counted multiple times, but when two authors are from the same country, the paper is only counted once for that country.

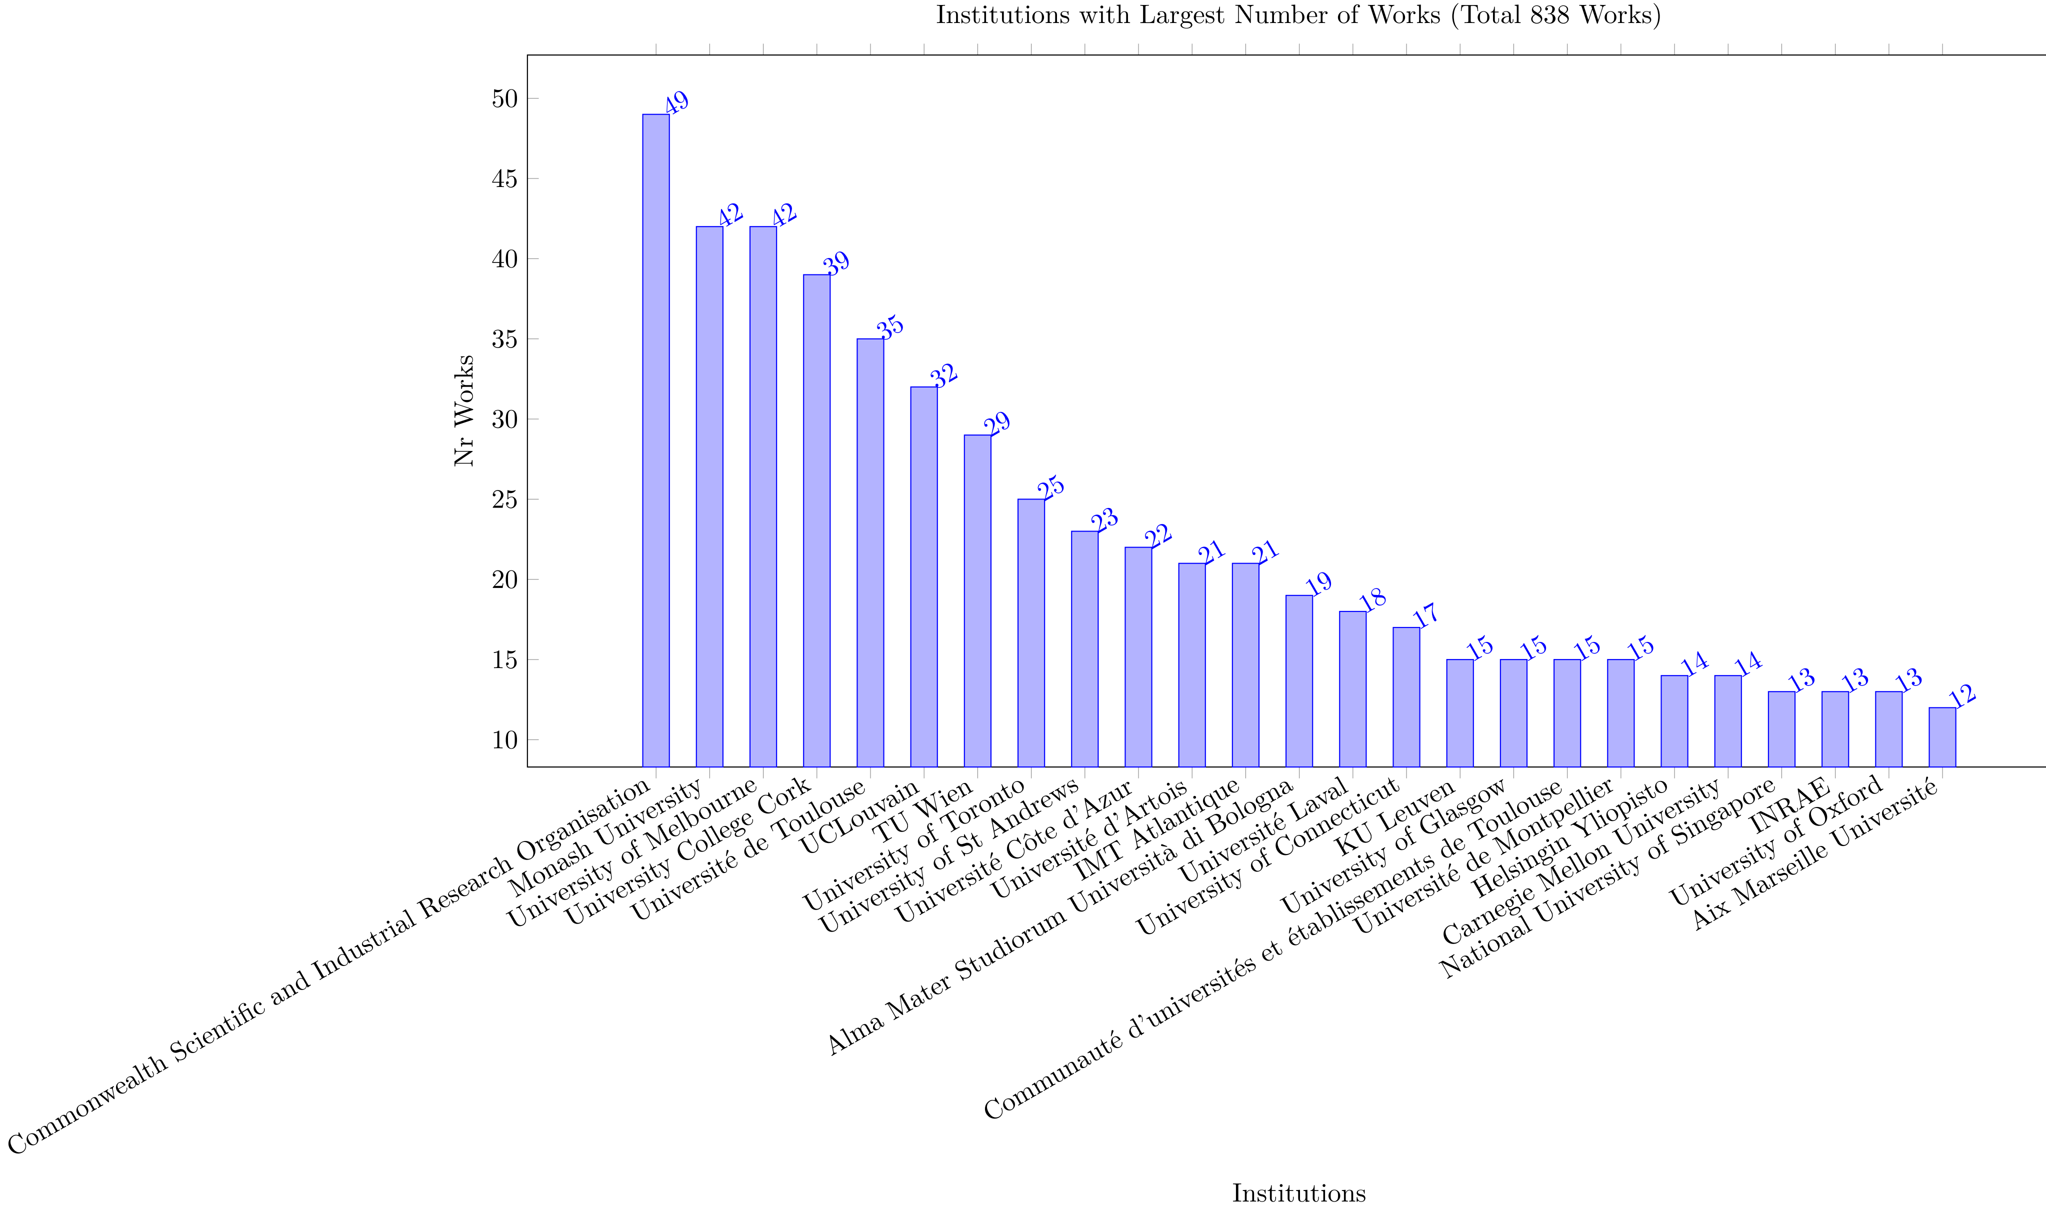
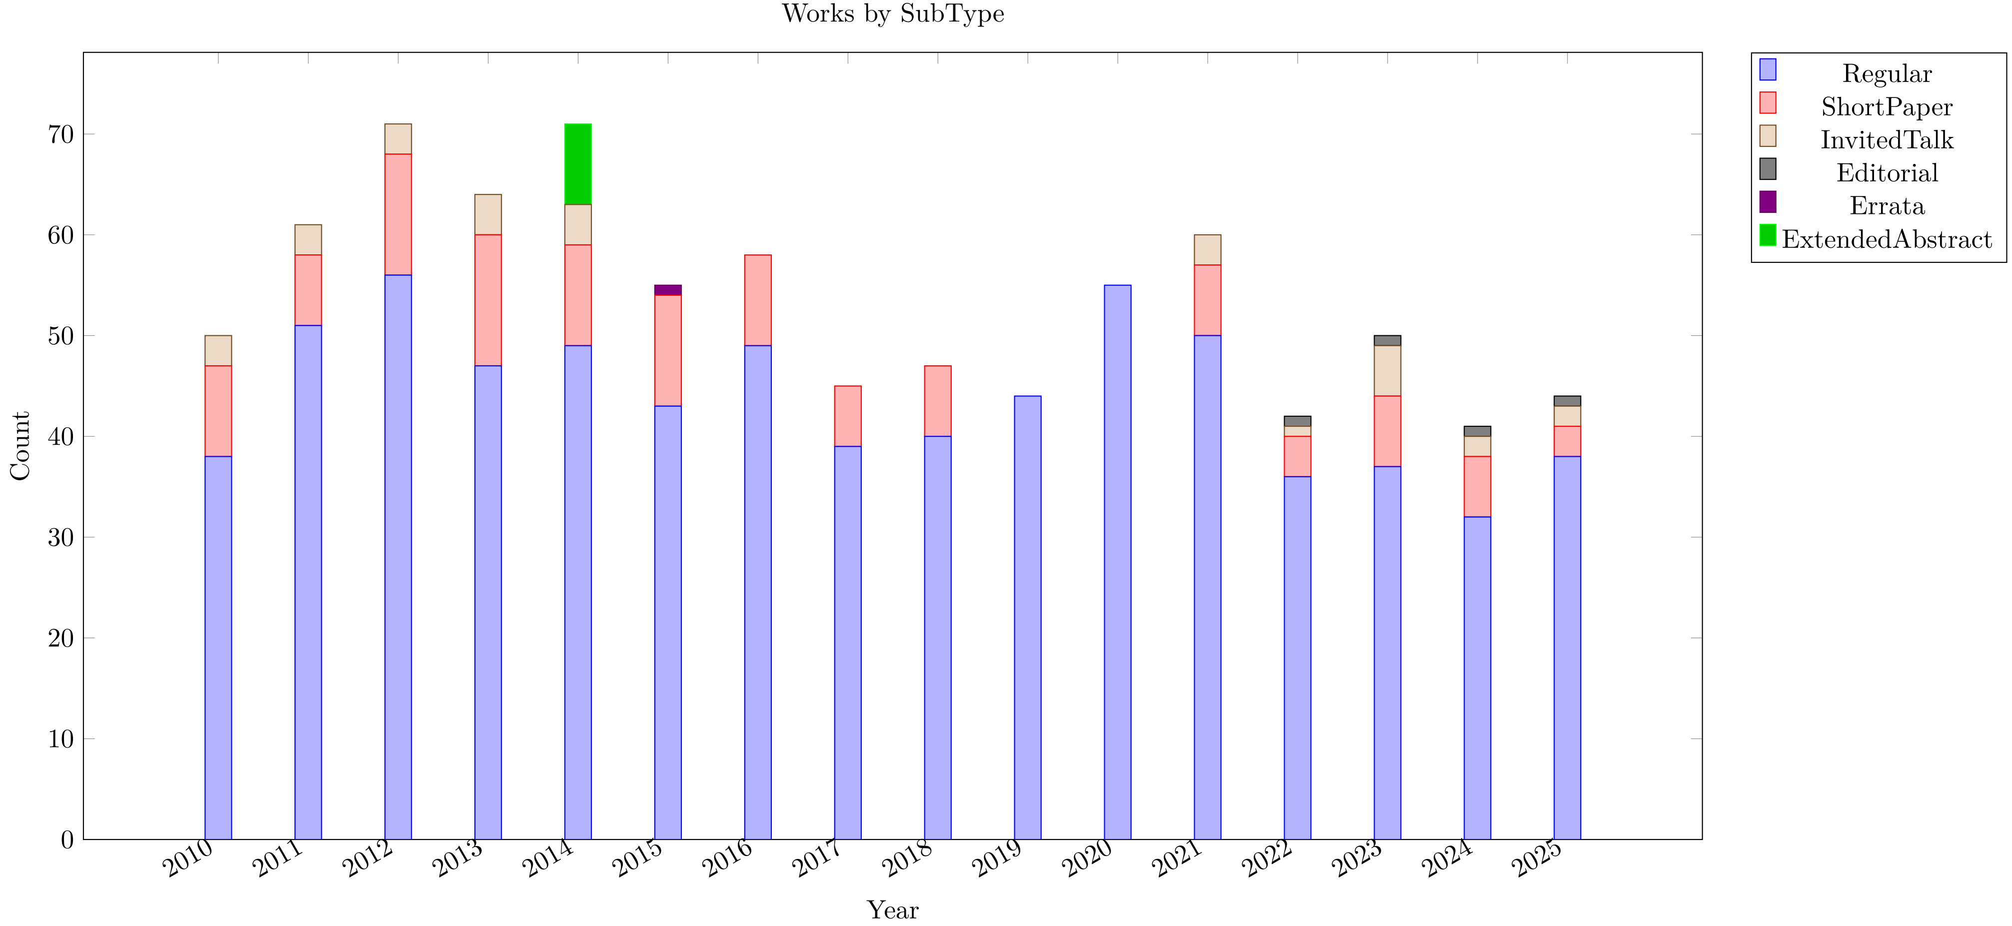
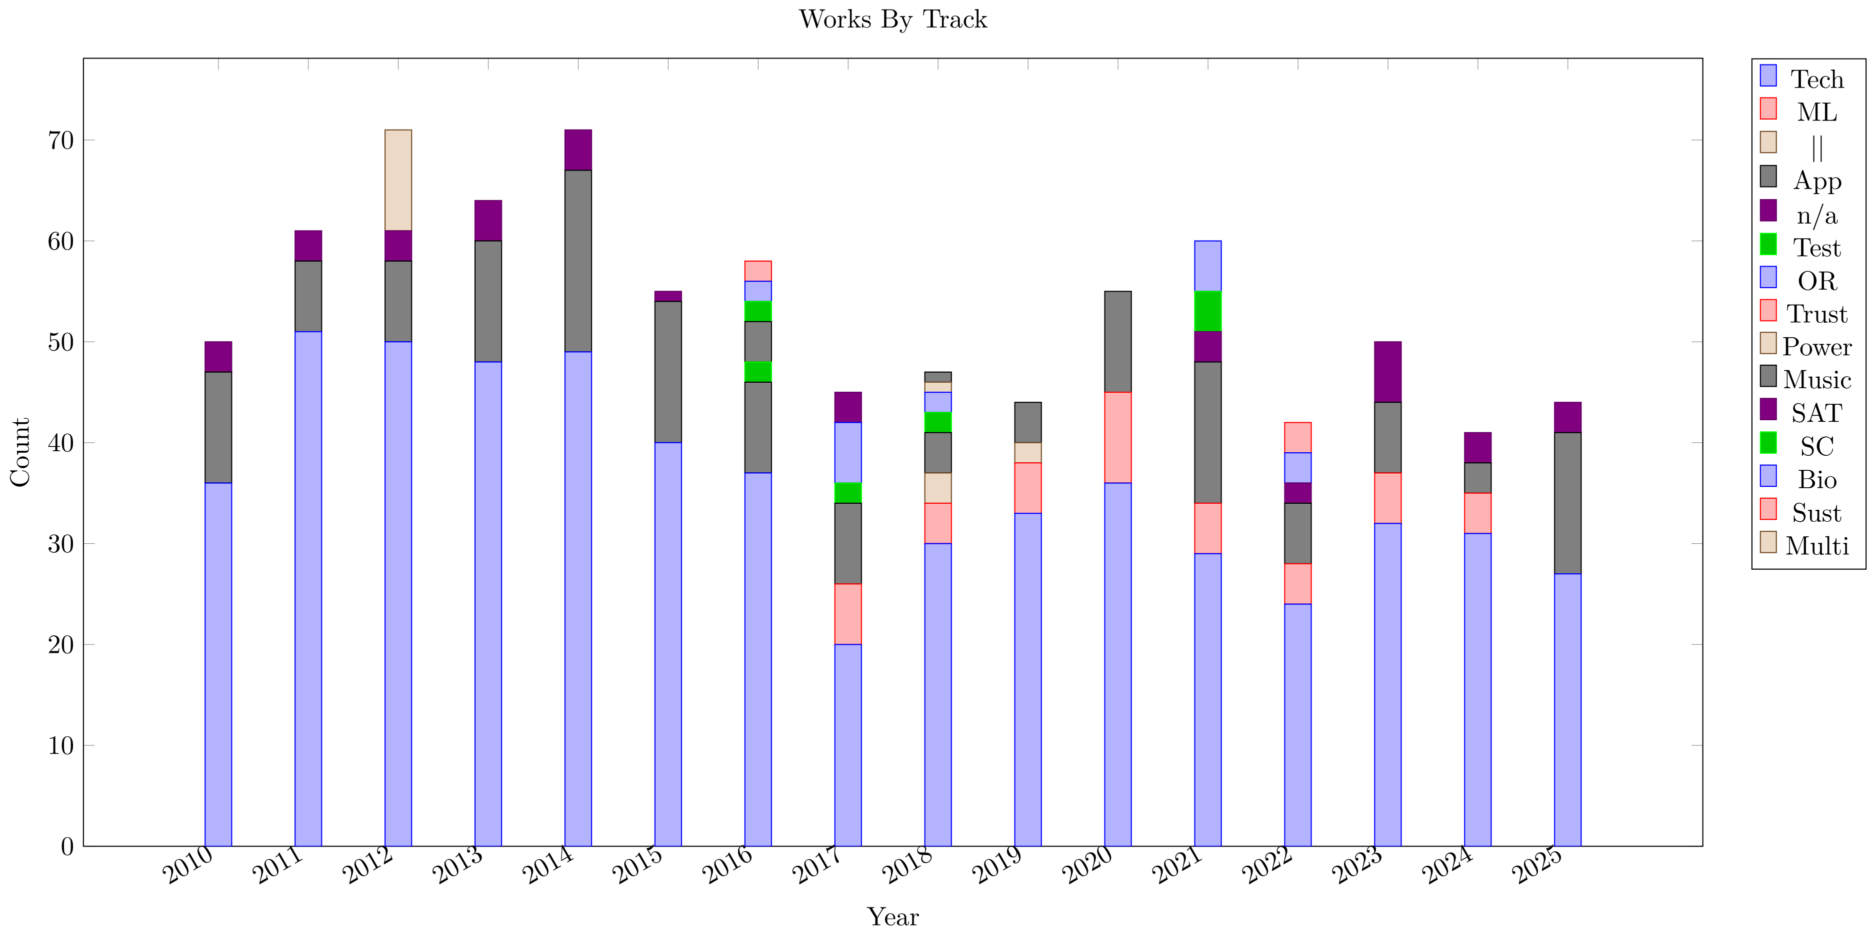
The following Figure shows the origin of the articles by Institution, based on the meta-data in the Scopus record. A potential problem is that different affiliations may be used for the same centre at the same time, or the name of the institution changes over the period of the survey.



The following Figure shows the number of publications per year, split into different sub categories. We can see that while the total number of publications varies a lot over the years, the number of regular submissions is also quite variable. 2019 and 2020 did not have short papers, for many years the invited talks were not presented as abstracts in the proceedings. In 2014 there was a concept of an extended abstract, where previous journal (from different journals) presentations were summarised for the proceedings, and presented at the conference. These were all assigned to the application track.



We also show the distribution of papers in different tracks over the years.



The authors of papers in the conference proceedings may decide to submit an extended version of the work to a journal. We attempt to capture this, especially when the extended version is published in the Constraints journal. The next figure shows the number of papers that are marked as linked to an extended version. We distinguish the "Direct" publication of some papers in CP 2015 and 2016 to the Constraints journal from other extended version that appear both in the proceedings and the journal. In 2014, extended abstracts of previously published journal articles appeared in the proceedings, they are marked as Abstracts. Note that over time the approach to include extended versions in the Constraints Journal has changed, there have been special issues with invited submissions of best papers, or individual invitations to submit to a journal, or a general invitation to submit. The resulting number of accepted papers changes accordingly.

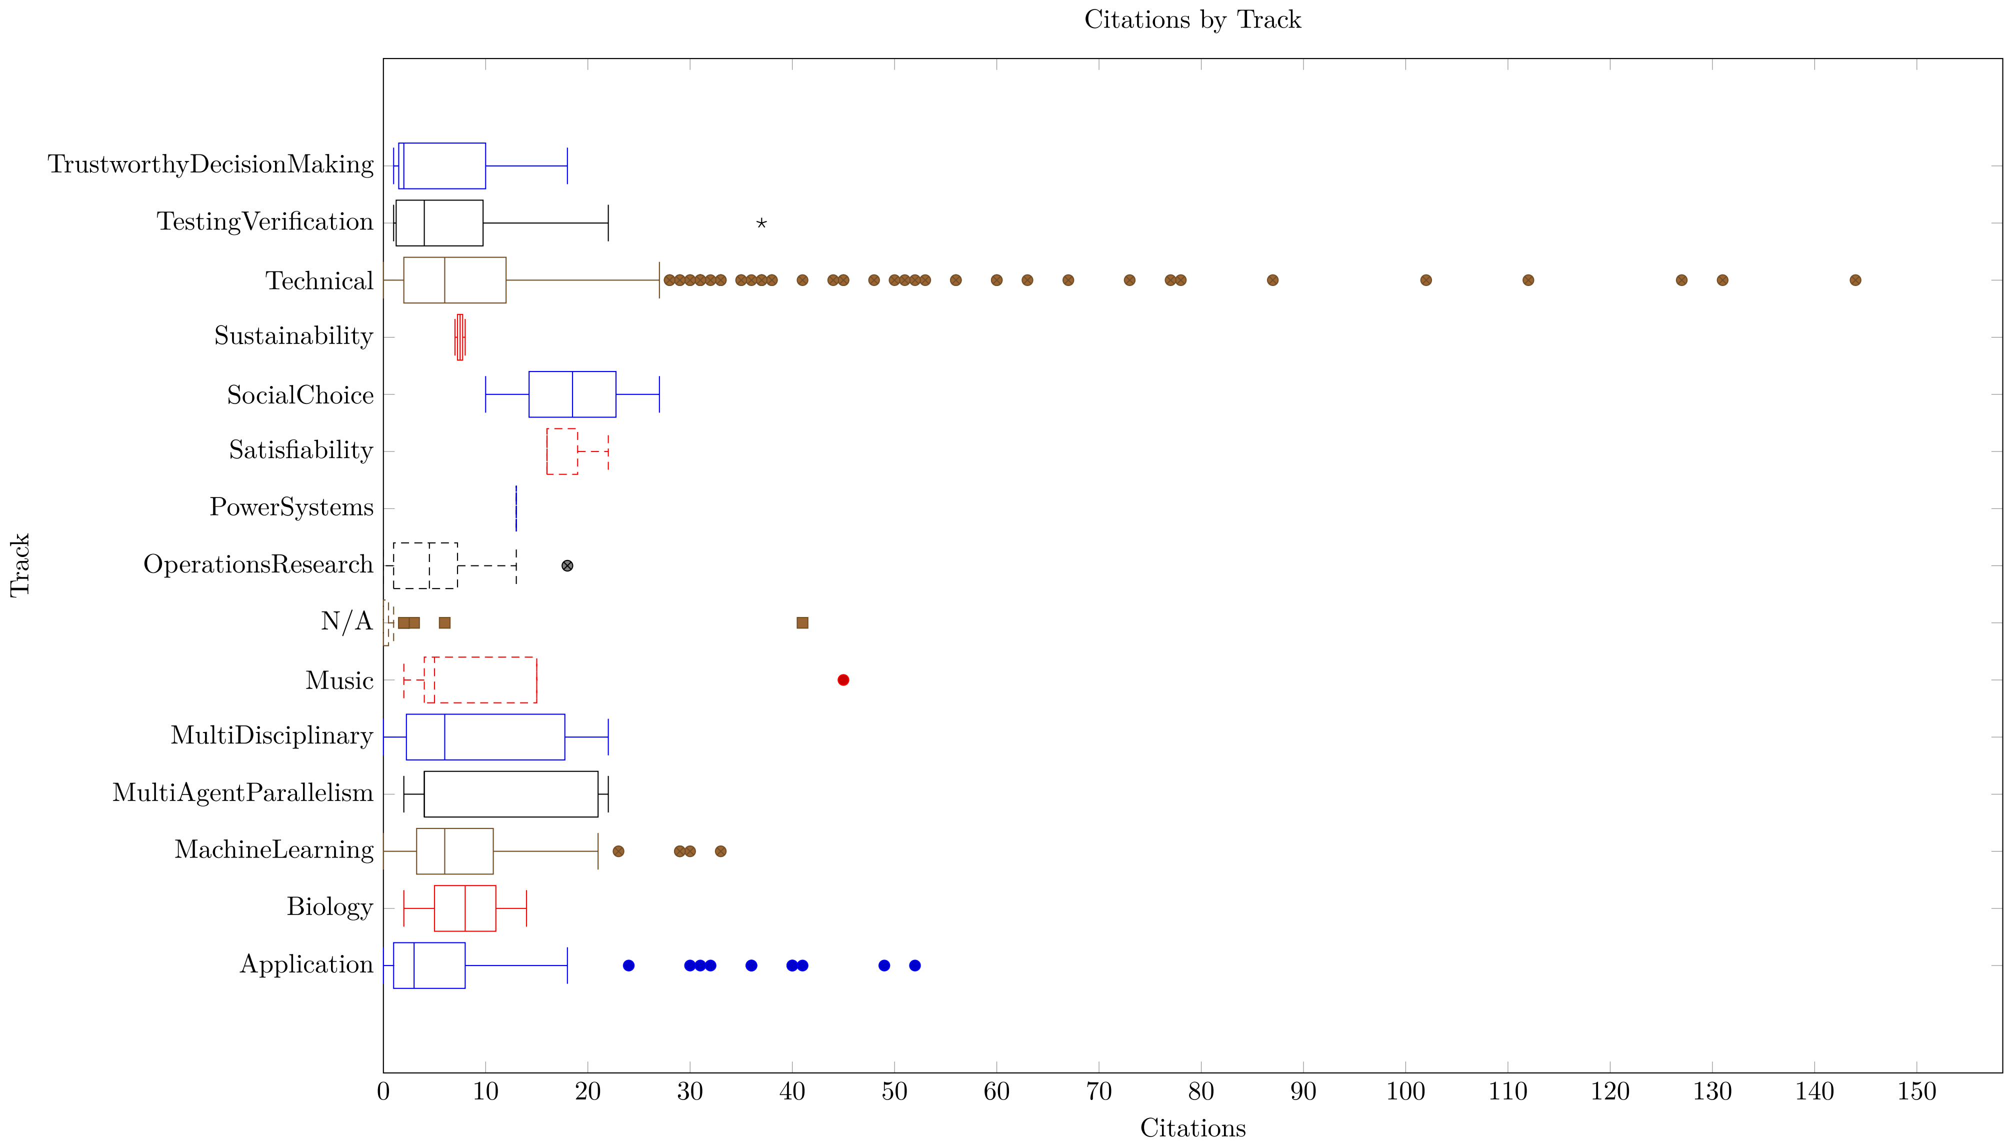
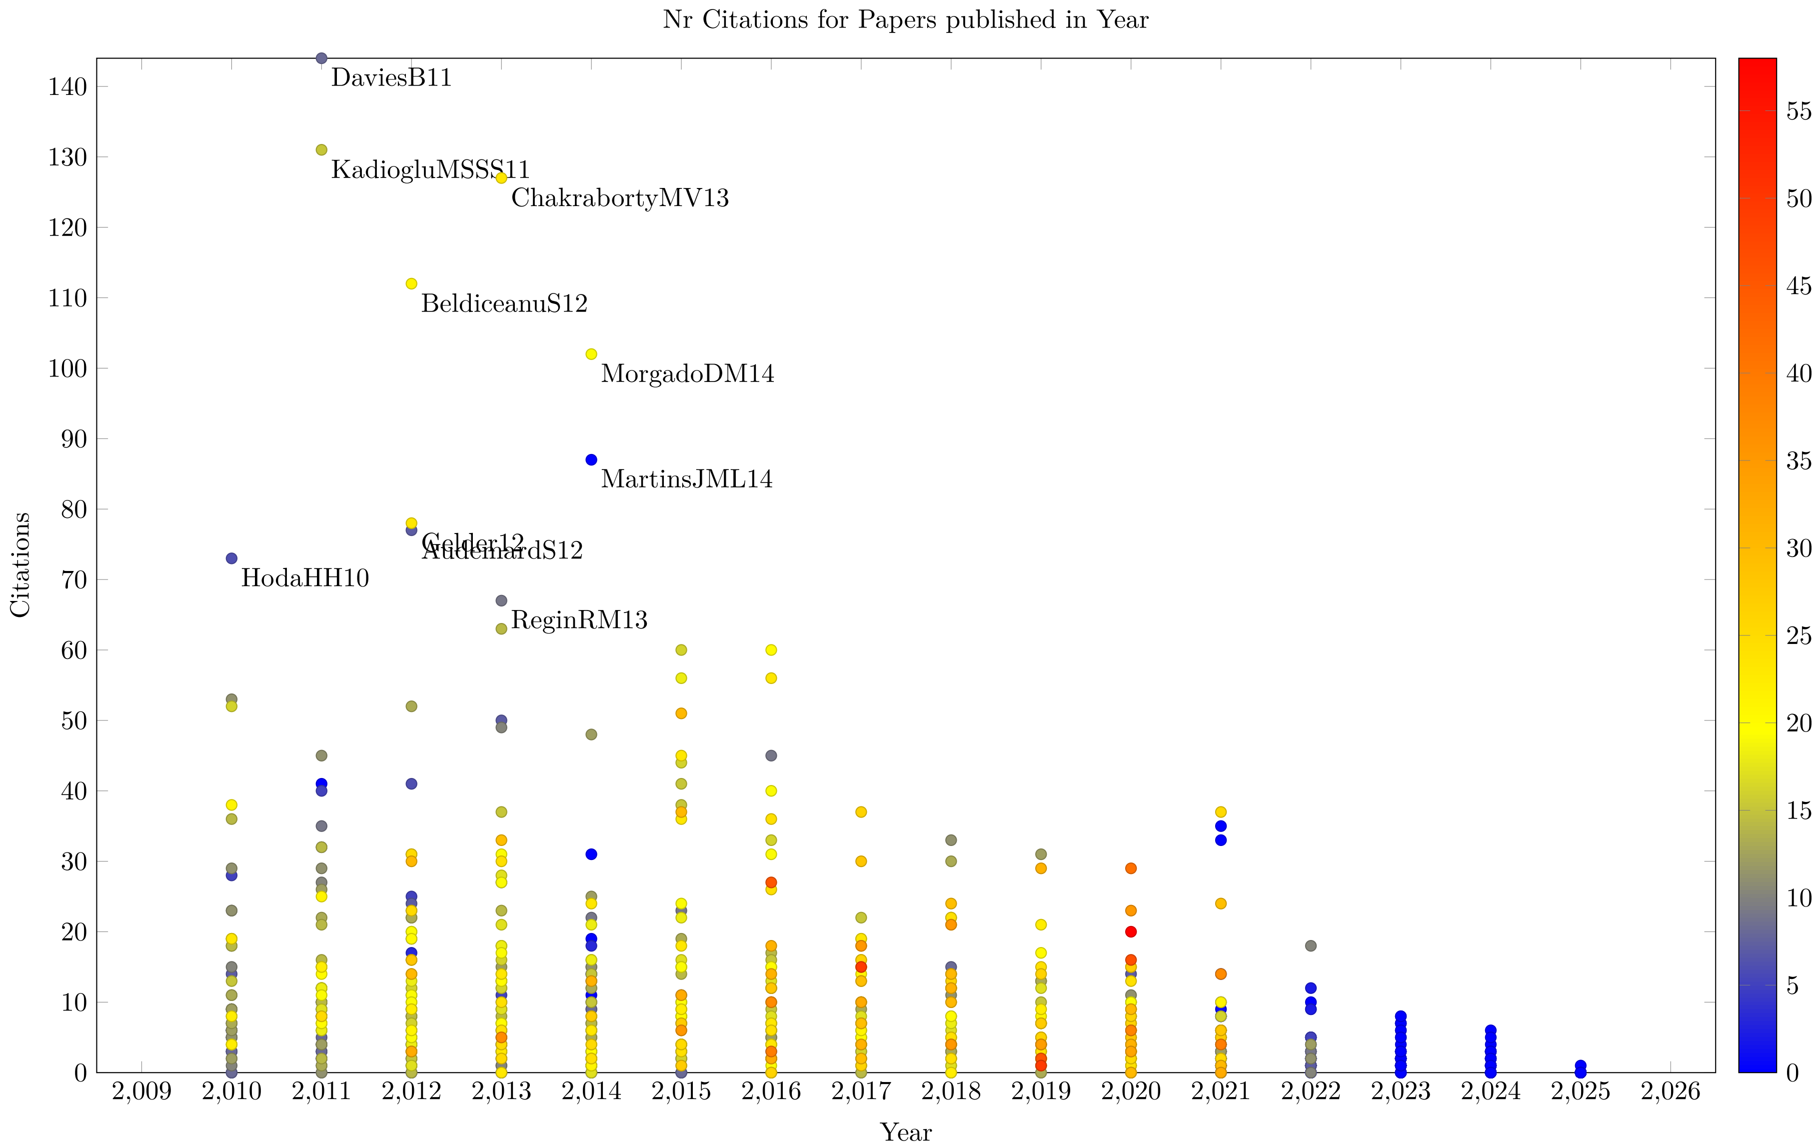
The next figure shows the box plot of the distribution of citations by track. Here, citations are the highest number of citations recorded by Opencitations, Crossref and Scopus. Outliers are displayed by markers, reaching up to 150 citations for the Technical track, while the highest numbers for the other tracks are much lower.

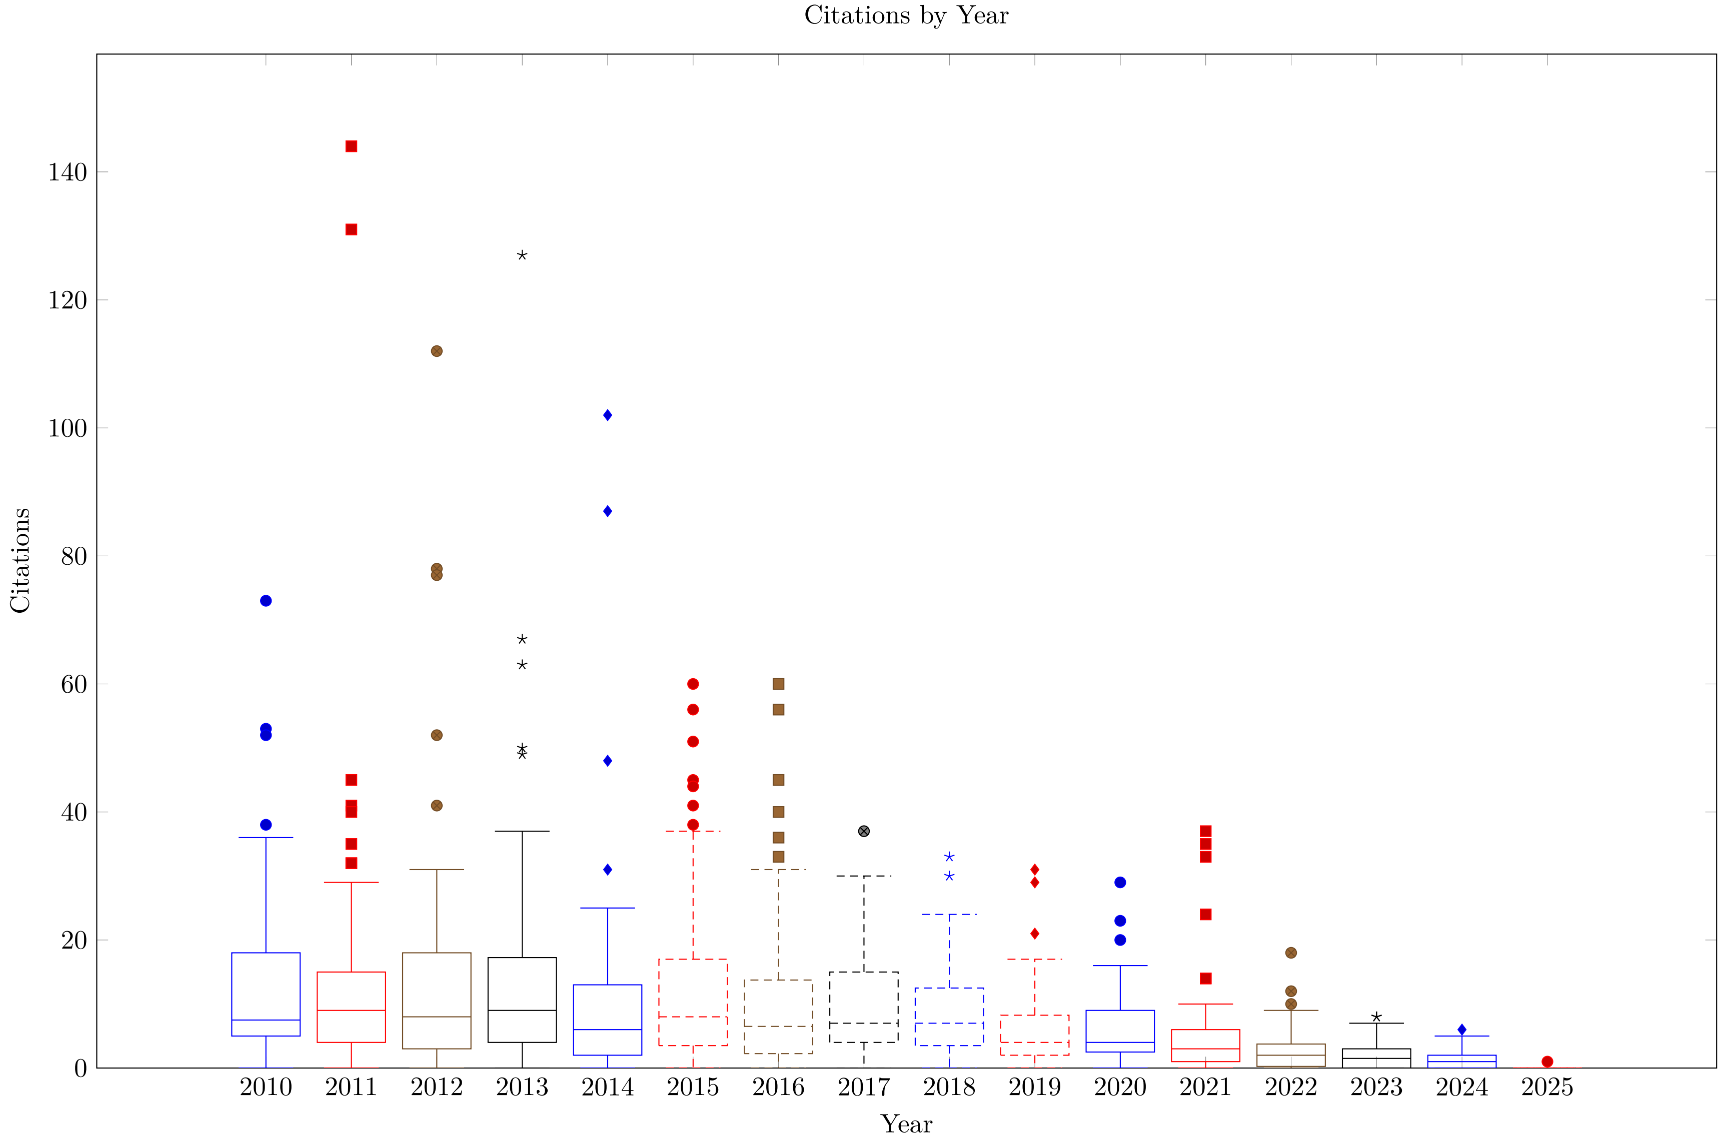


The next figure shows the number of citations over the years in a Scatterplot, with each marker representing one paper. The markers are colored by the number of references of the paper. Note that the low number of citations and references in recent years is due to the fact that the Lipics published conference proceedings are not properly indexed by OpenCitations and Crossref. The ten papers with the highest number of citations are indicated by a label with the key of the paper.



The same information is used in the boxplot of the citation distribution in the next figure. The average number of citations in each year is quite low, with more recent years showing very low values. This can be explained to some extent by the lack of time to accumulate citations, but it will also be influenced by the lack of indexing of the Lipics papers.

In general, the data sources used may not report all citations, and therefore be lower than numbers reported by, for example, Google scholar. Spot checks with the citation count of the SpringerLink pages of the papers from before 2021 seem to show that in general the numbers shown here are comparable, but different, from the number reported by Springer.



The last figure shows a histogram of the citation counts, with 50 bins to cover the range of observed citation counts. The majority of papers have 10 or fewer citations at this point in time.

3 Paper List

This section presents the information for all papers included in the survey. The papers are sorted by year of publication (newest first), and then alphabetically by key.

The key field of the table contains a hyperlink to the original source URL of the paper. On the visited page, you may have to navigate manually to see or download the actual paper content, and you may be unable to access the full paper at all if it is behind a paywall for which you (or your organization) do not have access.

We then list the authors of the paper, in the order given in the bibtex file, abbreviating first names for space where we can identify them. Note that names with non-latin characters are not handled by latex. We use the form that is given in the bibtex file, but have excluded entries that cause latex to fail.

We then give the title of the publication, using the original capitalization of the title entry in the bibtex entry, which may differ from the format shown in the bibliography. We then (column Details/LC) provide links to a more detailed description of the paper, and, if present, to a local copy of the pdf. this is followed by a link to the bibliography entry of the paper, we also show the year of publication. This is followed by the source of the publication, here the CP conference proceedings or the Constraints journal. This coloumn also shows the sub-type of publication, like short paper, and the track. If no infomation is given, it is a regular paper in the Technical track. The background color of the cell indicates an award, gold for best papers, silver (gray) for runner-ups and blue for a non-canonical list of selected papers by Freuder. The next column gives the page count, as well as the journal where an extended version is published. For journal papers, it may also list a special issue. The background color indicates a link to an extended version in green, or a non-regular sub-type in red. The relevance counts in the next column are computed from keyword matches in the title, abstract or body of the paper. For the CP Conference survey these counts are not very meaningful. The next column gives the citation counts for the paper, using Opencitations (OC), Crossref (XR) and Scopus (SC). This is followed by the reference count from OpenCitations (OC) and Crossref (XR). These reported number of references may vary significnatly from the actual number of references in the paper, which you may check in the pdf of the paper. The variations indicate that not all reference were properly indexed, or, in the case of Opencitations, not DOI descriptor for the referred work is known. The last column is the number of links within the survey, giving the total number of links of the given paper, the number of citations by other papers in the survey, and the number of references of the paper that are also in the survey.

3.1 Conference Papers and Directly Published Journal Articles from bibtex

5 Works by Author

This section takes a more comprehensive look at the most prolific authors published in the conference. We show the graph of co-authorship relations between authors with four or more publications in the survey, which shows a high degree of connectivity, even when we only consider the articles published in the conference proceedings.

The next Figure shows the percentage of regular papers that have at least one prolific co-author. We see that for example 50% of all papers have at least one co-author that has published eight or more papers in the conference. A quarter of the regular works have at least one co-author with 17 or more published articles (that is a group of 19 authors).

On the other hand, less than 10% of all papers are published by teams that have never published a paper in the CP conference before.

Note that this analysis only considers the time period from 2010-2025.

Impact of Prolific Authors

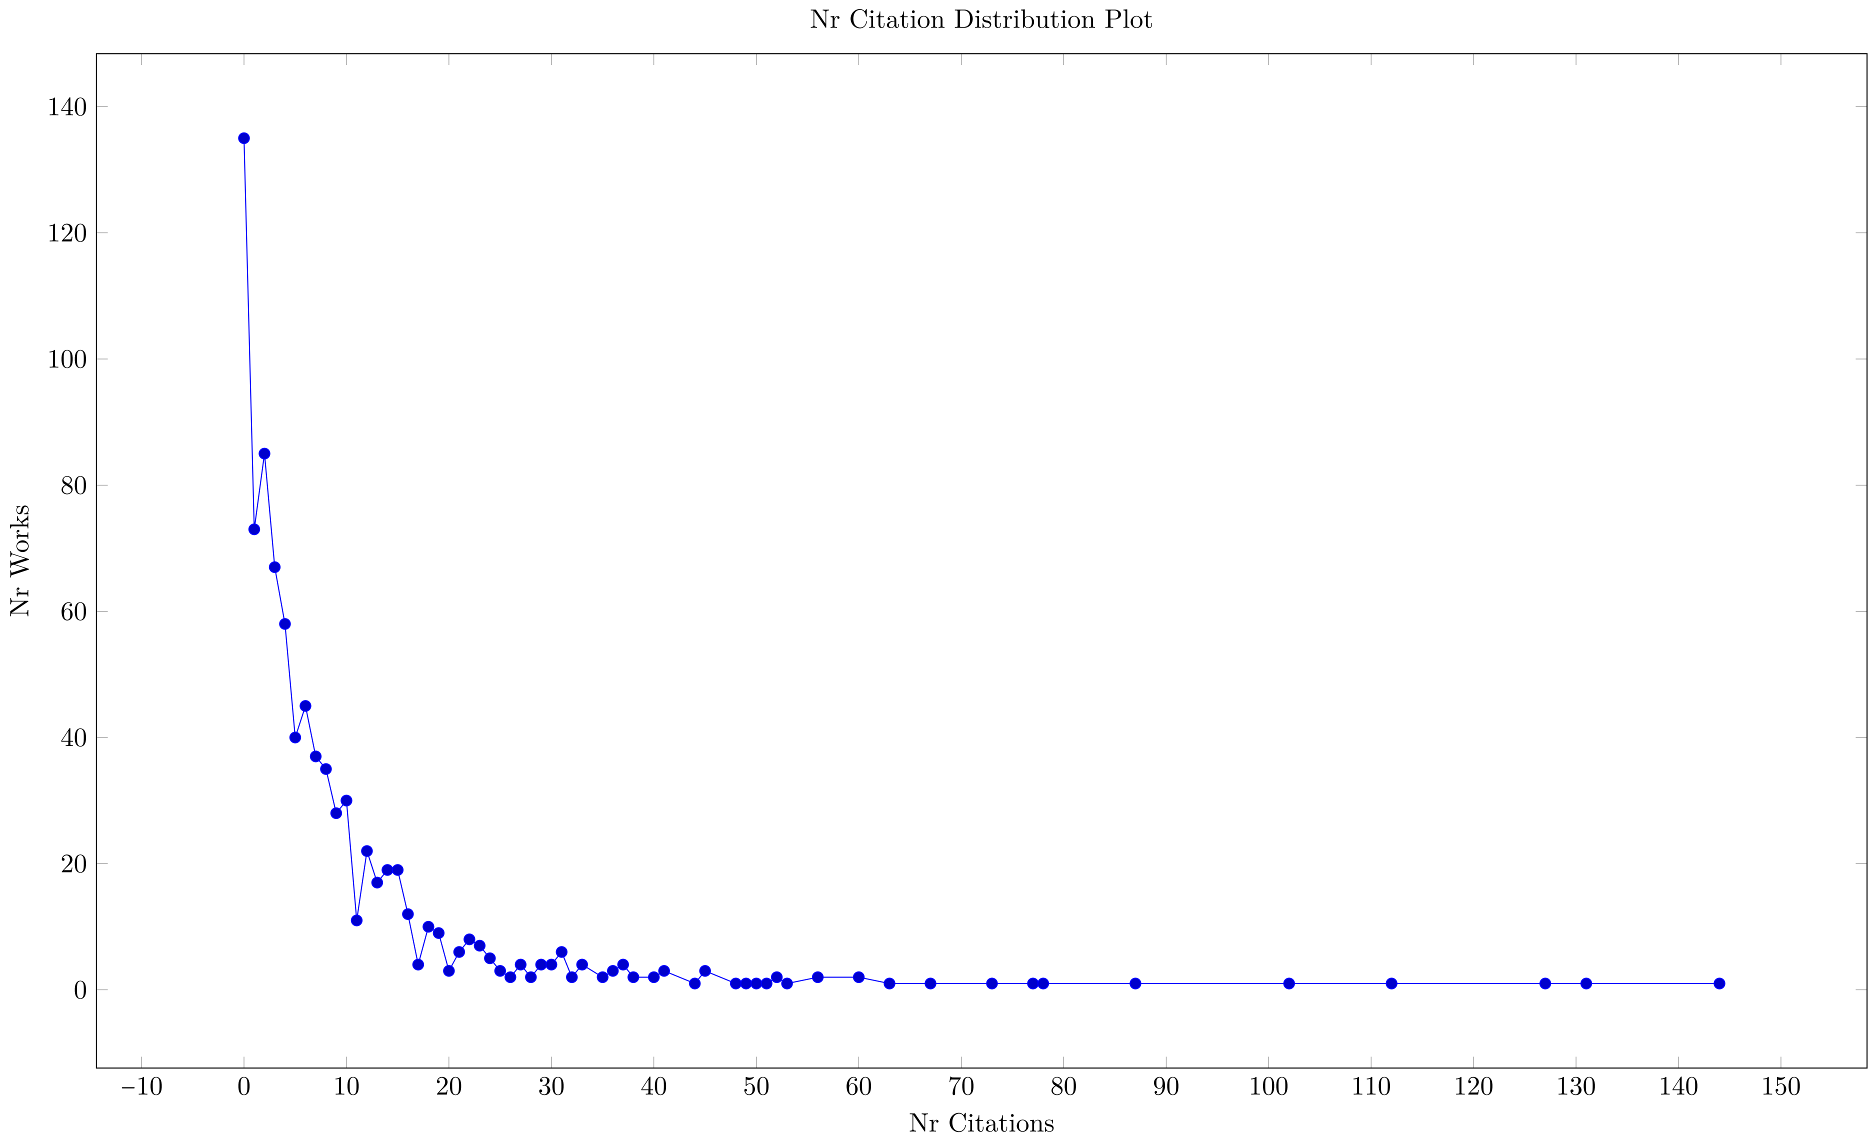
6 Most Cited Works

The first Figure in this section shows the number of works with a given number of citations. There is one paper with over 280 citations, and over 90 works with no recognised citations. Note that the citation count here is the maximum of citations given by the OpenCitations, CrossRef and Scopus meta-data. These numbers are often different from the numbers shown on the SpringerLink website, for which we do not have automated meta-data access.



We can note that the most cited papers are, with one exception, not the award winning papers of the conference, but that the retrospective list by Freuder contains a significant subset of the most cited papers. The best paper awards of the conference typically are selected from the papers with the highest review score, this score is typically only marginally influenced by a prediction of the future popularity of the work. It might be interesting to study the link between review scores and future citation count, but this is outside the scope of this analysis.

A fundamental issue is that for linked papers we only see the citation count for the proceedings, not the total of citations for the conference and the journal together. We are currently not analysing the linked papers in detail, but this could be done in the future.

7 Most Connected Works

There is a high number of connections between papers in the survey, where one paper refers to some earlier paper in the conference. Figure 2 shows the largest connected component (of the undirected reference graph). Coloured nodes have a higher number of connections.

The following list shows the papers with the highest number of connections within the survey.

Table 113: Most Connected Works (Total 30)

10 Award Winning Papers

The following list shows the award winning papers over time, arranged by year of publication. Which awards are given out in a specific year depends on the choice of the program chair, best technical track and best Application track awards are common, as is a special award fro the best student paper, where the main author is a student at the time of submission. In some years, runner up awards in different categories are given as well, and more rarely, specific best paper awards for other tracks. The list of award winning papers can be found on the ACP website (`https://www.a4cp.org/awards/paper-awards`).

Gene Freuder created a virtual volume of CP conference papers celebrating the first 25 years of the conference (`https://freuder.me/cp-anniversary-project/`). While this list is not an official award, we include it in the analysis as it provides some retrospective view of of papers published in the conference.

11 Linked Papers

The following list shows all conference papers that are known to be published as extended versions in a journal. It is very likely that some papers are not included, it may also be argued that in some cases the journal paper is not an extended version of a single conference paper. Feedback from the authors would be valuable to complete the list.

12 Link Candidates

We attempt to automate the process of finding linked journal papers by a search through all citing works for each paper. If we find journal papers that refer to a paper, we check the author lists of both papers for similarity, and also compare the titles. The following list gives a ranked list of these candidates. Values with high author and title similarity counts need to be checked by hand.

13 Works by SubType

The following tables list papers by sub types, this may be interesting to some readers.

13.1 Short Papers

The actual page count of short papers may change over time, typical values for Springer LNCS are four, eight, or eight+references pages.

Table 119: Works of SubType ShortPaper (Total 111)

14 Works by Track

The following tables list papers by track, excluding the "Technical" and "N/A" tracks. Note that the track assignment is not always easy, some papers matching some track may be assigned to a different track by the authors or the program chair.

14.1 Applications

Table 123: Works of Track Application (Total 149)

CDO	ApplicationAreas	Collateralised debt obligation
CECSP	Classification	Continuous Energy-Constrained Scheduling Problem
CHSP	Classification	Cyclic Hoist Scheduling Problem
CLP	CP	Constraint Logic Programming
COP	CP	Constraint Optimization Problem
COVID	ApplicationAreas	Coronavirus disease
CP	CP	Constraint Programming
CSP	CP	Constraint Satisfaction Problem
CTW	Classification	Cable Tree Wiring Problem
CuSP	Classification	Cumulative Scheduling Problem
DCOP	CP	Distributed Constraint Optimization Problem
DNF	Algorithms	Disjunctive normal form
DPLL	Algorithms	Davis Putnam algorithm
EOSP	Classification	Earth Observation Scheduling Problem
FC	Algorithms	Forward checking
FJS	Classification	Fixed Job Scheduling
GAP	Classification	Generalized Assignment Problem
GCC constraint	Constraints	global cardinality constraint
GCSP	Classification	Group Cumulative Scheduling Problem
GPU	Concepts	Graphics Processing Unit
GRASP	Algorithms	Greedy Randomized Adaptive Search Procedure
HFF	Classification	Hybrid Flexible Flow-shop
HFFTT	Classification	Hybrid Flexible Flowshop with Transportation Times
HFS	Classification	Hybrid Flow-shop Problem
HVAC	ApplicationAreas	Heating Ventilation Air-Conditioning
IGT	Algorithms	Improved Guo Tao algorithm
JSPT	Classification	Job-Shop Scheduling Problem with Transportation
JSSP	Classification	Job-Shop Scheduling Problem
KRFP	Classification	kernel resource feasibility problem
LLM	Concepts	Large Language Model
LP	CP	Linear Programming
LSFRP	Classification	Liner Shipping Fleet Repositioning Problem
MAC	Algorithms	Maintaining arc consistency
MDD	CP	Multivalued decision diagram
MGAP	Classification	Modified Generalized Assignment Problem
MILP	CP	Mixed Integer Linear Programming
MINLP	Algorithms	Mixed-Integer Non-linear Programming
MIP	CP	Mixed Integer Programming
MIQP	Algorithms	Mixed-Integer Quadratic Programming
MaxSAT	CP	Maximum Satisfiability
NEH	Algorithms	Scheduling Algorithm developed by Nawaz, Enscore, Ham
OPD	ApplicationAreas	Optimal portfolio design
OSP	Classification	Oven Scheduling Problem
OSSP	Classification	Open Shop Scheduling Problem

Table 128: Acronym Concepts

Acronym	Type	Description
PCB industry	Industries	printed circuit board industry
PD	ApplicationAreas	Portfolio design
PJSSP	Classification	Pre-emptive Job-Shop scheduling Problem
PMSP	Classification	Parallel Machine Scheduling Problem
PP-MS-MMRCPSP	Classification	partially preemptive- multi-skill/mode resource-constrained project scheduling problem with generalized precedence relations and resource calendars
PTC	Classification	Scheduling Problem with Time Constraints
QBF	CP	Quantified Boolean Formulas
QCSP	CP	Quantified Constraint Satisfaction Problem
RCMPSP	Classification	Resource-Constrained Multi-Project Scheduling Problem
RCPSP	Classification	Resource-constrained Project Scheduling Problem
RCPSPDC	Classification	Resource-constrained Project Scheduling Problem with Discounted Cashflow
RTMP	Classification	Railway Traffic Management Problem
RWA	ApplicationAreas	Routing and wavelength assignment
SAT	CP	Satisfiability
SBSFMMAL	Classification	Simultaneous Balancing and Scheduling of Flexible Mixed Model Assembly Lines
SCC	Classification	Steel-making and continuous casting
SMSDP	Classification	steel mill slab design problem
STRIPS	Concepts	Stanford Research Institute Problem Solver
TCSP	Classification	Temporal Constraint Satisfaction Problem
TMS	Classification	Transmission Network Maintenance Planning
TSP	ApplicationAreas	Traveling salesman problem
UTVPI constraint	Constraints	unit two variable per inequality constraint
WCSP	CP	Weighted Constraint Satisfaction Problem
psplib	Classification	Project Scheduling Problem Library
rtRTMP	Classification	real-time Railway Traffic Management Problem

16 Concept Matching

In order to automatically find out properties of the articles, we try to find certain concepts in the pdf versions of the articles. We manually defined an ontology of important concepts to look for, and defined regular expressions that would recognize these concepts in the text. We use the *pdfgrep* command to search for the number of occurrences of certain regular expressions in the files. This often clearly identifies the constraints used in the model. We group the results by number of occurrences of the concept in the text of the work. Note that this is only approximate, as we do include the full pdf file in the search. A concept might only be mentioned in some of the title of citations used in the paper, we do count them in our results, as we were not able to remove the bibliography from the main body of the work.

Overall, if a work is not mentioned as using the concept, the the text does not contain a match to the corresponding regular expression. A fundamental limitation of this approach is that it only really works for text written in the language the regular expressions are designed for (in our case English), and not those written in another language. We could overcome this limitation by defining all concepts in other languages as well, and then using a language flag to identify the language the text is written in.

Note that we only show the first 30 matching entries in each concept category, and list the total number of matches if there are more than 30 matches.

A Papers and Articles Missing a Local Copy

This section lists all papers and articles for which we were not able to locate an electronic copy that we could download to our system. This might be because the work is behind a paywall for which we do not have access, or since the paper only exists in hardcopy, for works from the start of the period covered. As in either case we are not able to extract useful information from the work, either automatically, or manually, without the actual text itself, these gaps should be closed where possible.

Some journals are highlighted in red, indicating that I cannot read these through our library. This helps to avoid repeatedly checking whether I can access the papers via the publication URL. The highlighting is controlled by the blocked.json file in the imports/ directory.

Table 138: PAPER without Local Copy (Total 0)

Key/URL	Authors	Title	Rele-vance	Year	Conference /Journal	Cite

Table 139: ARTICLE without Local Copy (Total 0)

Key/URL	Authors	Title	Rele-vance	Year	Conference /Journal	Cite

B Papers and Articles Without Recognized Concepts

This section lists papers and articles for which we have a pdf local copy, but where we were not able to extract any of the defined concepts. This can basically have two reasons. We either have included a paper which is not at all related to scheduling, so that none of the defined concepts occur in the paper. A more likely cause is that the pdf file is a scanned document for which optical character recognition was not run or not successful, so that the pdf consists of a series of bitmap images. In that case, pdfgrep is unable to find any text in the document, and no matches for concepts are found. It may be useful to check the pdf files to see if that is the case.

Table 140: PAPER without Concepts

Key	Local Copy	Authors	Title	Year	Conference /Journal	Cite	Pages

B.1 Irrelevant Work Suspects

The works in the following table might be irrelevant, as their computed relevance for the body text is very low. Works that do not have a local copy or that only are one or two pages long are excluded from this analysis.

KhelifaBA18 [458] Details A Novel Graph-Based Heuristic Approach for Solving Sport Scheduling Problem	13	0.00 0.00 **1.30**	Constraint, CP, constraint programming	Heuristic, simulated annealing, meta heuristic, GRASP, Local search	tournament, travelling tournament problem, round-robin, TSP, sports scheduling, Sport scheduling	benchmark		Scheduling, Shortest path, Search method, Backtracking	cycle	Numerica, Grasp	
OttenD14 [634] Details Anytime AND/OR Depth-First Search for Combinatorial Optimization - (Extended Abstract)	5	0.00 0.00 **1.30**	AI, Artificial Intelligence, Constraint, CSP, CP, Weighted CSP, constraint satisfaction, constraint satisfaction problem	Heuristic, Local search, Arc consistency, Consistency, soft arc consistency	Computational biology, round-robin	benchmark		Depth-first search, Graphical model, stochastic, Search strategy, Infeasible, Scheduling, Explanation, periodic			
Granvilliers12 [352] Details Adaptive Bisection of Numerical CSPs	9	0.00 0.00 **1.30**	Constraint, CP, constraint satisfaction, constraint programming, CLP, constraint satisfaction problem	Heuristic, Consistency, Box consistency, Filtering algorithm	round-robin	benchmark		Search tree, Kinematic, Impact based search, Newton method, Search strategy	Global constraint	Numerica	
McCreeshPP19 [580] Details Understanding the Empirical Hardness of Random Optimisation Problems	17	0.00 0.00 **1.40**	Constraint, CP, constraint satisfaction, MaxSAT, constraint programming, constraint satisfaction problem, SAT	Heuristic, Local search, MAC	Graph coloring, Time-window	random instance, github, generated instance, benchmark		Phase transition, Search strategy, Branching strategy, Tree search, Graph isomorphism			
FedyukovichG19 [279] Details Functional Synthesis with Examples	18	0.00 0.00 **1.50**	Constraint, CP, constraint programming	Heuristic, Disjunctive normal form, Consistency, DNF, machine learning	patient	benchmark, github		Decision tree	table constraint, Extensional constraint, disjunctive, Global constraint		

Table 142: Features of Works that might be Irrelevant

Work/Title	Pages	Relevance	CP	Algorithms	Application-Areas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Hooker17 [395] Details Job Sequencing Bounds from Decision Diagrams	14	0.00 0.00 **1.50**	Constraint, CP, MDD, constraint programming, Constraint store	Heuristic	Time-window	benchmark, random instance		Decision diagram, Shortest path, Dynamic programming, tardiness, Infeasible, Scheduling, due-date, Domain variable, Lagrangian method, Search strategy	circuit		
PanJGSMYZ17 [641] Details Integrating ILP and SMT for Shortwave Radio Broadcast Resource Allocation and Frequency Assignment	9	0.00 0.00 **1.50**	Constraint, CP, CSP, constraint satisfaction, propagation	Local search, Consistency, Tabu search, Heuristic		real-world		Assignment problem, Search method, NP-Complete, stochastic	circuit, Boolean constraint, Pseudo-Boolean constraint	Cplex	
Jarvisalo11 [425] Details On the Relative Efficiency of DPLL and OBDDs with Axiom and Join	9	0.00 0.00 **1.60**	SAT, propagation, BDD, Constraint, CP, Artificial Intelligence, constraint propagation	DPLL, clause learning, Heuristic, conflict-driven clause learning				Unsatisfiable, Decision diagram, Unit propagation, Search tree, Branching heuristic, Complete search, Tractability, Quantifier elimination			
ScottTBH13 [730] Details Residential Demand Response under Uncertainty	16	0.00 0.00 **1.70**	Constraint, MILP, COP, CP	reinforcement learning	real-time pricing, Time-window	real-world		stochastic, Uncertainty, Scheduling, Dynamic programming, Markov model, Agent, transportation, multi-agent, preempt, Infeasible, preemptive, distributed	cumulative	Gurobi	

Table 142: Features of Works that might be Irrelevant

Work/Title	Pages	Relevance	CP	Algorithms	Application-Areas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
IgnatievPM16 [406] Details On Finding Minimum Satisfying Assignments	11	0.00 0.00 **1.90**	SAT, Constraint, CP, MaxSAT, QBF	clause learning		benchmark, github	Improved version	Encoding, Debugging, Explanation		Mistral	
SunIKE16 [765] Details Finding Unsatisfiable Cores of a Set of Polynomials Using the Gr/"obner Basis Algorithm	17	0.00 0.00 **1.90**	SAT, Constraint, CP, AI	Heuristic, clause learning		benchmark	revised	Infeasible, Labeling, Functional dependency, Shortest path, Unsatisfiable, Explanation	circuit		
LelisOD14 [518] Details Memory-Efficient Tree Size Prediction for Depth-First Search in Graphical Models	16	0.00 0.00 **2.00**	Artificial Intelligence, Weighted CSP, CSP, CP, SAT, Constraint, AI	Heuristic, Local search, Consistency, Algorithm selection, machine learning	Auction	benchmark		Graphical model, Search tree, Depth-first search, Tree search, Back-tracking, stochastic, Search method, Uncertainty, Bucket elimination, Explanation, Automatic search, Variable elimination			
RollonL11 [697] Details On Mini-Buckets and the Min-fill Elimination Ordering	15	0.00 0.00 **2.00**	Weighted CSP, CSP, Artificial Intelligence, propagation, CP, Constraint, WCSP	Heuristic	Auction, medical	benchmark, real-world		Graphical model, Bucket elimination, Variable elimination, Dynamic programming, Bayesian network, Explanation, backtrack free, Hypergraph	regular expression		

Table 142: Features of Works that might be Irrelevant

Work/Title	Pages	Relevance	CP	Algorithms	Application-Areas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
KuhlemannST19 [483] Details Exploiting Counterfactuals for Scalable Stochastic Optimization	19	0.00 0.00 **2.20**	Constraint, CP, constraint optimization, Constraint programming model, LP, Artificial Intelligence, constraint programming, SAT	Heuristic, machine learning, Local search, Tabu search, meta heuristic	airport, Vehicle routing	real-world, benchmark	RCPSP, psplib, Resource-constrained Project Scheduling Problem	stochastic, Uncertainty, Shortest path, Planning, Scheduling, Pareto, precedence, Dynamic programming, Search method, make-span	cumulative, Side constraint	Numerica, OR-Tools, CP-Sat	airline industry
McCreeshP14 [581] Details Reducing the Branching in a Branch and Bound Algorithm for the Maximum Clique Problem	15	0.00 0.00 **2.20**	Constraint, constraint programming, MaxSAT, CP, propagation, constraint satisfaction problem, constraint satisfaction	Heuristic, MAC, genetic algorithm, Tabu search	Protein structure, Bioinformatics	benchmark		cmax, Explanation, Encoding, Search tree, NP-Complete, Tractability, Tree search		Choco Solver	
BentH10 [92] Details Spatial, Temporal, and Hybrid Decompositions for Large-Scale Vehicle Routing with Time Windows	15	0.00 0.00 **2.20**	Constraint, CP, Constraint-Based, Artificial Intelligence, constraint programming	Heuristic, Local search, large neighborhood search, meta heuristic, genetic algorithm, memetic algorithm	Vehicle routing, Time-window	benchmark, real-world		transportation, Temporal constraint, Search method, Planning, Search strategy, Agent, multi-agent, Scheduling, Explanation	cumulative, Side constraint		
FagerbergFMP12 [275] Details Exploring Chemistry Using SMT	16	0.00 0.00 **2.30**	Constraint, constraint logic programming, constraint programming, CP	Heuristic		real-world		Planning, Hypergraph, Agent, NP-Complete, Backtracking, Backbone			
Vaz0LS23 [799] Details Predict-Then-Optimise Strategies for Water Flow Control (Short Paper)	10	0.00 0.00 **2.40**	CP, Constraint, MIP, constraint programming, Modelling language, Artificial Intelligence	machine learning, column generation	Vehicle routing	industry partner, benchmark, supplementary material		Scheduling, stochastic, Planning, periodic, Timeseries, Regret	cycle	MiniZinc, Gurobi, OR-Tools, Cplex	

Table 142: Features of Works that might be Irrelevant

Work/Title	Pages	Relevance	CP	Algorithms	Application-Areas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Ahmadizade-hDGS10 [14] Details An Empirical Study of Optimization for Maximizing Diffusion in Networks	8	0.00 0.00 **2.40**	MIP, Constraint, CP		Social network	real-life, random instance, real-world	OSP	stochastic, Planning, sustainability	Redundant constraint	Cplex	
LiWWC21 [525] Details Improving Local Search for Minimum Weighted Connected Dominating Set Problem by Inner-Layer Local Search	16	0.00 0.00 **2.50**	CP, Constraint, Artificial Intelligence, constraint programming	Local search, Heuristic, MAC, ant colony, meta heuristic, FC, Algorithm configuration	Wireless sensor network	benchmark, real-world, github, supplementary material		Search method, distributed, Backbone, Ant colony optimisation, periodic, Visualization			

B.2 Works with Few Extracted Concepts

These works do match only few concepts, they might be discussing other topics that should be included in the list of concepts, or they might be irrelevant, and included in the survey by mistake.

Table 143: Works with Low Feature Count (Total 30)

C Unmatched Concepts

This section lists those concepts for which no matches were found. The most likely cause is a mistake in the regular expression used to find the concept, but it is also possible that some concept simply is not mentioned in any of the documents.

Table 145: Unmatched Concepts
