

Constraint Programming and Scheduling

Helmut Simonis and Cemalettin Öztürk

2025-11-01

1 Introduction

This document shows the result of a survey on "Constraint Programming and Scheduling", which tries to find and classify all publications on the combination of these two concepts. It is based on a manually collected bibfile containing reference to relevant papers and articles, and on an automatic and manual analysis of local copies of the cited papers. For copyright reasons, we are obviously not able to distribute the collected copies, but we provide links to the original sources of the files.

We identify the papers by a key which is the last name of the first author, the first character of the last names of all other authors, and a two digit year code for the date of publication. If multiple works would define the same key, we differentiate by adding a suffix "a", "b", etc, to the second and subsequent works found.

Most of the content of this document is generated by a Java program that parses the bib files, adds any manually extracted information, and which then extracts concept occurrences from the local copies of the works. It then produces tables and other LaTeX artifacts that are included in a manually defined top-level document.

To add new works, first add bibtex entries for each work in the main `./imports/scheduling.bib` file, then add local copies of the pdf of the work to the `./works/` directory, using the key of the bibtex entry as the file name (plus extension `.pdf`), and then run the main Java program `org.insightcentre.pthg24.JfxApp` to consolidate the information and extract the relevant concepts. Finally, run `lualatex` on the `./scheduling.tex` file to produce this pdf document. Manually extracted information for the files can be added in the `./imports/manual.csv` file. New concepts can be added in the file `./imports/concepts.json`, new concept types need to be directly defined in the Java code.

We start the document by providing a table of all defined keys in the bib file in alphabetical order. This table can be helpful to see if a candidate paper is already in the survey, it suffices to see if the key is already present, and matches the authors, title and origin of the candidate paper. In the table the hyper-link given by the key points to the local copy of the file, while the citation number links to the bibliography entry. That entry typically also contains a link to the original source of the paper.

This document heavily depends on the use of hyper links in the document, it has been tested with Acrobat Reader, other pdf reader may not use links in the same way. If you read the on-line version of the document, the links to the local files will not be active.

2 Conference Paper List

This section presents the information for all conference papers included in the survey. For space reasons, not all information about the papers can be presented in a single table, we therefore split the data into three parts. The first part contains the main bibliographical information for the paper. The papers are sorted by year of publication (newest first), and then alphabetically by key.

The key field of the table contains a hyperlink to the original source URL of the paper. You may have to navigate manually to see or download the actual paper content, and you may be unable to access the paper at all if it is behind a paywall for which you (or your organization) do not have access.

We then list the authors of the paper, in the order given in the bibtex file, abbreviating first names for space where we can identify them. Note that names with non-latin characters are not handled by latex. We use the form that is given in the bibtex file, but have excluded entries that cause latex to fail.

We then give the title of the publication, using the original capitalization of the title entry in the bibtex entry, which may differ from the format shown in the bibliography. We then (column LC) provide a link to a local copy, if it is present, and a link to the bibliography entry of the paper. We also show the year of publication, and the conference where the paper was published, using a short form abbreviation of the conference. This relies on a matching routine in the Java code to find the short title, new conference series may require an additional entry in `ImportBibtex.java` to work properly. Finally we list the number of pages of the paper, this information is using the bibtex entry where possible, otherwise uses `pdfinfo` to extract the actual number of pages from the local copy.

2.1 Conference Papers from bibtex

2.2 Extracted Concepts

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Antuori2025 [45] Details Solving the Agile Earth Observation Satellite Scheduling Problem with CP and Local Search	22	1.00 1.00 3.78	scheduling, order, task, machine, activity	CP, constraint programming	meta heuristic, large neighborhood search, genetic algorithm, machine learning, neural network, reinforcement learning	satellite, earth observation, airport	industrial partner, gitlab, benchmark, github, instance generator, generated instance, supplementary material, real-world	OSSP	periodic, multi-objective, distributed, re-scheduling, breakdown, due-date	noOverlap, cumulative, alwaysIn	CPO	
Assaf2025 [65] Details Optimized Scheduling of Medical Appointment Sequences Using Constraint Programming	16	1.00 1.00 2.58	resource, scheduling, order, machine, task	constraint programming, COP, constraint satisfaction, CP, CSP, propagation, constraint optimization, constraint propagation	time-tabling	medical, patient, nurse, physician	industrial partner, github, real-world		unavailability	alldifferent, cumulative, Arithmetic constraint	Choco Solver	
Bleukx2025 [174] Details Modeling and Explaining an Industrial Workforce Allocation and Scheduling Problem	24	0.00 0.00 17.72	task, scheduling, order, resource, job, machine, activity	CP, CSP, constraint programming, COP, constraint optimization, constraint satisfaction, propagation, constraint propagation	edge-finding, large neighborhood search	aircraft, workforce scheduling	github, supplementary material, zenodo, gitlab	FJS	explanation, Unsatisfiable, explainable, re-scheduling, multi-objective, job-shop, Infeasible, precedence, transportation, make-span, distributed, Over-constrained, breakdown, Pareto	cumulative, noOverlap, disjunctive	OR-Tools, Gurobi	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Danzinger2025 [306] Details Modeling and Solving the Generalized Test Laboratory Scheduling Problem	17	0.00 0.00 31.47	task, job, resource, scheduling, order, machine, activity	CP, constraint programming	large neighborhood search, time-tabling		real-world, benchmark, industrial partner	RCPSP, Resource-constrained Project Scheduling Problem, RCMPSP	setup-time, completion-time, due-date, precedence, release-date, Infeasible	cumulative	MiniZinc	
Hebrard2025 [529] Details Disjunctive Scheduling in Tempo	22	0.00 0.00 26.67	job, scheduling, task, resource, order, machine, activity	CP, propagation, constraint programming, constraint propagation, CSP	edge-finding, lazy clause generation, large neighborhood search, conflict-driven clause learning, genetic algorithm, GRASP, machine learning, memetic algorithm		benchmark, github, gitlab, supplementary material		job-shop, explanation, open-shop, precedence, completion-time, cmax, producer/consumer, explainable, Unsatisfiable, make-span	disjunctive, noOverlap, cycle, cumulative, Disjunctive constraint	OR-Tools, Chuffed, Choco Solver, Gecode, Cplex, Mistral	
Le2025 [695] Details Aircraft Resource-Constrained Assembly Line Balancing with Learning Effect: A Constraint Programming Approach	24	0.50 0.50 10.12	task, resource, scheduling, order, machine	CP, constraint programming	mat heuristic, genetic algorithm, simulated annealing	aircraft, satellite, robot	benchmark, real-world, supplementary material, industrial partner	RCPSP, Resource-constrained Project Scheduling Problem	cmax, precedence, Pareto, preempt, preemptive, multi-objective, periodic, inventory, bi-objective, unavailability	cycle, cumulative, alwaysEqual constraint, endBeforeStart	CPO, OPL, Cplex	
Legrand2025 [698] Details A Dynamic Programming Approach for the Job Sequencing and Tool Switching Problem	16	0.00 0.00 0.36	job, machine, order, scheduling, resource	constraint programming			benchmark, github			Cardinality constraint, cycle		

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Luchterhand2025 [769] Details Understanding the Impact of Value Selection Heuristics in Scheduling Problems	23	0.00 0.00 5.62	scheduling, order, resource, task, job, activity, machine	CP, propagation, constraint propagation, constraint programming, constraint satisfaction, CSP, constraint optimization	neural network, deep learning, genetic algorithm, sweep, memetic algorithm, GRASP, edge-finding, conflict-driven clause learning, machine learning, lazy clause generation		benchmark, gitlab, supplementary material, github	OSP, RCPSP, Resource-constrained Project Scheduling Problem, psplib	explanation, job-shop, precedence, open-shop, Unsatisfiable	cumulative, disjunctive, cycle	Chuffed, Choco Solver	
Montanaro2025 [841] Details A Column Generation Heuristic for Multi-depot Electric Bus Scheduling	16	0.00 0.00 0.00	scheduling, machine, resource, task		column generation, machine learning, mat heuristic, meta heuristic, GRASP, neural network		real-world, industrial partner, benchmark		Pareto, transportation, cmax, sustainability			
Prumm2025 [965] Details Scheduling Telescope Observations for the European Southern Observatory (Short Paper)	10	0.00 0.00 1.91	task, scheduling, order, resource	CP, propagation, constraint programming, constraint optimization, CSP		telescope	benchmark, supplementary material		Unsatisfiable	diffn, disjunctive, table constraint, Atmost constraint	OR-Tools, MiniZinc, CHIP, OPL	
Rouzot2025 [1017] Details Integer and Constraint Programming for the Offline Nanosatellite Partition Scheduling Problem	18	1.00 1.00 9.77	task, job, scheduling, order, machine, resource	CP, constraint programming	mat heuristic	satellite	generated instance, instance generator, real-world, random instance, gitlab	single machine	precedence, periodic, Pareto, online scheduling, cyclic scheduling, preempt, preemptive, completion-time, Infeasible, re-scheduling, multi-objective	cycle, noOverlap, circuit	OR-Tools	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Sidorov2025 [1075] Details Unite and Lead: Finding Disjunctive Cliques for Scheduling Problems	24	0.00 0.00 22.43	task, resource, scheduling, order, activity	CP, propa- gation, constraint program- ming, CSP, constraint satisfaction, constraint propagation	edge- finding, lazy clause generation, time- tabling, energetic reasoning, edge-finder, conflict- driven clause learning	high perfor- mance computing	benchmark, supplemen- tary material, zenodo, github	RCPSP, psplib, Resource- constrained Project Scheduling Problem	explana- tion, completion- time, make-span, Infeasible, precedence, Unsatisfi- able, re- scheduling, distributed	disjunctive, cumulative, Disjunctive constraint, alldifferent, Cumula- tives constraint	Chuffed, Gecode, MiniZinc, OR-Tools, OPL	
Weidmann2025 [1228] Details Multi-League Sports Scheduling with Team Interdependencies: An Optimization Model	19	0.00 0.00 1.53	scheduling, task, order, activity	CP, constraint program- ming, constraint satisfaction	time- tabling, simulated annealing, meta heuristic	sports scheduling, tourna- ment, round-robin	real-world, github, generated instance, supplemen- tary material		Infeasible, distributed, explana- tion, multi- objective			
Barral2024 [100] Details Acquiring Constraints for a Non-linear Transmission Maintenance Scheduling Problem	17	0.00 2.00 0.50	scheduling, task, order, machine	CP, constraint program- ming	machine learning	mainte- nance scheduling		TMS, SCC	periodic, explana- tion, Benders Decomposi- tion, sustainabil- ity, bi-objective	alwaysE- qual constraint, alwaysIn, Disjunctive constraint, noOverlap, disjunctive		electricity industry
BonninMNE24 [199] Details Toward a Global Constraint for Minimizing the Flowtime	12	0.00 0.00 2.55	task, scheduling, machine, order, resource, job, activity	constraint program- ming, CP, propagation	edge- finding, particle swarm, sweep, time-tabling	vaccine, patient, COVID	benchmark, real-life	single machine	flow-time, release- date, precedence, flow-shop, preempt, preemptive, completion- time, make-span, single- machine scheduling, open-shop, explana- tion, job-shop	Flowtime constraint, disjunctive, Completion constraint, cumulative, Disjunctive constraint, noOverlap	Cplex	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Cherif24 [269] Details Minimizing Working-Group Conflicts in Conference Session Scheduling Through Maximum Satisfiability (Short Paper)	11	0.00 0.00 1.18	scheduling, resource, task, order, machine, activity	CP, constraint programming, propagation	time-tabling, large neighborhood search	train schedule	Roadef, benchmark, github, generated instance, real-world, real-life, supplementary material		Unsatisfiable	Cardinality constraint, circuit	OR-Tools	
Cloutier24 [285] Details Cumulative Scheduling with Calendars and Overtime	16	0.00 0.00 5.96	task, resource, scheduling, machine, order, job	propagation, CP, constraint programming, constraint propagation	time-tabling, lazy clause generation, meta heuristic, edge-finding		github, supplementary material, benchmark	psplib, RCPSP, Resource-constrained Project Scheduling Problem	make-span, explanation, completion-time, precedence, preempt, Unsatisfiable, periodic, preemptive, job-shop, setup-time	cumulative, Calendar constraint, disjunctive, Element constraint	Chuffed, MiniZinc	
Col2024 [291] Details Pursuing the Optimal CP Model: A Batch Scheduling Case Study	13	1.00 1.00 9.52	job, machine, scheduling, order, task, resource	CP, constraint programming, propagation, constraint propagation, CSP, constraint satisfaction, constraint optimization	large neighborhood search, genetic algorithm	oven scheduling	benchmark	OSP	setup-time, job-shop, batch process, due-date, Over-constrained, re-scheduling	cumulative, endBeforeStart, span constraint, Arithmetic constraint, noOverlap, alternative constraint	CPO, MiniZinc, OPL, OR-Tools, Gurobi, Choco Solver	
Euler2024 [383] Details ULD Build-Up Scheduling with Logic-Based Benders Decomposition	18	0.00 0.00 1.26	scheduling, job, machine, resource, order	CP, constraint programming, constraint logic programming, propagation	energetic reasoning	aircraft, airport, crew-scheduling	benchmark, github	single machine	Benders Decomposition, Logic-Based Benders Decomposition, Infeasible, inventory, stochastic, batch process, manpower	cumulative	Gurobi, OR-Tools	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
FalqueALM24 [392] Details Check-In Desk Scheduling Optimisation at CDG International Airport	9	0.00 0.00 1.19	task, order, scheduling, resource, job	CP, constraint programming, COP, constraint optimization, constraint satisfaction	lazy clause generation, column generation, large neighborhood search	airport, stand allocation, COVID, aircraft	github, real-world, gitlab, supplementary material		transportation, periodic	table constraint, alldifferent	MiniZinc, Choco Solver, OPL	
Green24 [478] Details Using Constraint Programming for Disjunctive Scheduling in Temporal AI Planning	17	1.00 1.00 5.25	scheduling, order, resource, task, machine, job, activity	CP, constraint programming, CSP, constraint satisfaction, propagation		satellite	benchmark	TMS	make-span, job-shop, producer/consumer, multi-objective	disjunctive, noOverlap, alternative constraint, span constraint		
Houten2024 [1186] Details Learning from Scenarios for Repairable Stochastic Scheduling	9	0.00 0.00 0.75	task, scheduling, resource, machine	CP, constraint programming, propagation	reinforcement learning, machine learning		industrial instance, real-world, industrial partner, github	psplib, RCPSP, single machine	stochastic, make-span, precedence	Pulse constraint	Cplex	
Infantes2024 [591] Details Learning to Solve Job Shop Scheduling Under Uncertainty	17	0.00 0.00 2.15	job, scheduling, task, machine, order, resource	CP, constraint programming	reinforcement learning, neural network, machine learning, genetic algorithm, deep learning, meta heuristic	pipeline, robot	benchmark, github, real-world	JSSP	job-shop, make-span, stochastic, precedence, completion-time, reactive scheduling, breakdown, tardiness, due-date, multi-agent, cmax, preempt	disjunctive, cumulative, cycle	OR-Tools, Cplex	
Le24 [696] Details Learning Effect and Compound Activities in High Multiplicity RCPSP: Application to Satellite Production	25	0.00 0.00 5.74	activity, resource, scheduling, order, machine, task, job	CP, constraint programming	genetic algorithm	satellite, earth observation, aircraft, workforce scheduling, construction project	benchmark, real-world, industrial partner, supplementary material, industrial instance	RCPSP, psplib, Resource-constrained Project Scheduling Problem, RCMPSP, single machine	precedence, tardiness, due-date, make-span, preempt, preemptive, distributed, earliness, stochastic, single-machine scheduling	cycle, cumulative, endBeforeStart, Element constraint	OPL, Cplex	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
LiLZDZW24 [710] Details Learning to Optimize Permutation Flow Shop Scheduling via Graph-Based Imitation Learning	9	0.00 0.00 0.34	job, scheduling, machine, order, task	CP, constraint programming	NEH, reinforcement learning, neural network, machine learning, deep learning, meta heuristic		benchmark, github, real-life		make-span, flow-shop, distributed, transportation			
Nguyen2024 [879] Details Genetic-based Constraint Programming for Resource Constrained Job Scheduling	10	2.50 2.50 12.87	job, scheduling, resource, machine, order, task	CP, constraint programming	machine learning, meta heuristic, mat heuristic, ant colony, column generation, reinforcement learning, neural network, particle swarm, simulated annealing, genetic algorithm, quadratic programming, Lagrangian relaxation	tournament	benchmark, generated instance, instance generator, real-world	Resource-constrained Project Scheduling Problem, single machine	precedence, job-shop, tardiness, net present value, due-date, completion-time, re-scheduling, multi-agent, distributed, earliness, Infeasible	cumulative, Disjunctive constraint, disjunctive, bin-packing	OR-Tools, OPL	mining industry
Pucel24 [967] Details Constraint Programming Model for Assembly Line Balancing and Scheduling with Walking Workers and Parallel Stations	21	1.00 1.00 10.94	task, resource, scheduling, order, machine	CP, constraint programming		aircraft	benchmark, supplementary material, real-world	RCPSP, psplib, Resource-constrained Project Scheduling Problem	precedence, cyclic scheduling, multi-objective, preempt, make-span, preemptive	cycle, cumulative, endBeforeStart, noOverlap	OPL, OR-Tools	
Thomas2024 [1147] Details A Constraint Programming Approach for Aircraft Disassembly Scheduling	10	1.00 2.00 2.03	scheduling, resource, task, order, activity	CP, constraint programming	genetic algorithm, large neighborhood search, simulated annealing, meta heuristic	aircraft	industrial partner, real-life, github, industrial instance, real-world	RCPSP, Resource-constrained Project Scheduling Problem	make-span, precedence, unavailability, stochastic, sustainability, sequence dependent setup	cumulative, noOverlap, Balance constraint, cycle, alternative constraint		

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Verhaeghe24 [1196] Details Learning Precedences for Scheduling Problems with Graph Neural Networks	18	0.00 0.00 6.52	task, scheduling, resource, order, machine, job, activity	CP, constraint programming, propagation, constraint optimization, constraint satisfaction	neural network, machine learning, reinforcement learning, meta heuristic, edge-finding, edge-finder, deep learning, time-tabling, large neighborhood search, lazy clause generation		benchmark, github	RCPSP, psplib, Resource-constrained Project Scheduling Problem	precedence, job-shop, stochastic, Unsatisfiable, make-span	cumulative, cycle, alldifferent, table constraint	Chuffed	
AalianPG23 [2] Details Optimization of Short-Term Underground Mine Planning Using Constraint Programming	16	0.00 0.00 8.22	scheduling, machine, activity, resource, order	CP, constraint programming	large neighborhood search, genetic algorithm	steel cable	real-world		make-span, transportation, Infeasible, preemptive, preempt, flow-shop	cumulative, cycle, alwaysIn, noOverlap, endBeforeStart	CPO, Cplex	mining industry
Abreu2023 [7] Details Integer and Constraint Programming Formulations for the Open Shop Scheduling Problem with Sequence-Dependent Processing Times	8	1.00 1.00 2.74	job, machine, scheduling, order, resource	CP, constraint programming	mat heuristic	automotive	real-world	OSSP, Open Shop Scheduling Problem	open-shop, make-span, cmax, completion-time, tardiness, bi-objective, distributed, stochastic	noOverlap, cumulative	OPL, Cplex	
Bit-Monnot23 [169] Details Enhancing Hybrid CP-SAT Search for Disjunctive Scheduling	8	1.00 1.00 5.36	scheduling, job, order, activity, task, machine, resource	CP, propagation, constraint programming, constraint propagation, constraint satisfaction, CSP	lazy clause generation, particle swarm, large neighborhood search, genetic algorithm		benchmark, real-world, github	OSP, Partial Order Schedule, Open Shop Scheduling Problem	job-shop, explanation, open-shop, make-span, precedence, distributed	disjunctive, cycle, Disjunctive constraint, cumulative	CPO, Mistral, MiniZinc, OR-Tools	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Bley2023 [175] Details Propagation and Branching Strategies for Job Shop Scheduling Minimizing the Weighted Energy Consumption	8	1.00 1.00 1.03	machine, task, scheduling, job, activity, resource, order	propagation, constraint propagation, constraint programming		energy-price		single machine	job-shop, precedence, due-date, preempt, setup-time, preemptive, single-machine scheduling, energy efficiency, completion-time, release-date		Gurobi, SCIP	
BofillCGGPSV23 [186] Details Constraint Solving Approaches to the Business-to-Business Meeting Scheduling Problem (Extended Abstract)	2	0.00 0.00 0.28	scheduling, order, task	CP, constraint programming	lazy clause generation	meeting scheduling	real-world		precedence		Cplex, MiniZinc, Gecode	
EfthymiouY23 [359] Details Predicting the Optimal Period for Cyclic Hoist Scheduling Problems	16	0.00 0.00 1.31	scheduling, order, machine, job, task	CP, constraint programming, CSP	machine learning, neural network, reinforcement learning, meta heuristic, deep learning	hoist, pipeline, electroplating, satellite	random instance, industrial instance, generated instance, benchmark, real-life	CHSP, JSSP	make-span, job-shop, explanation, re-scheduling, setup-time	cycle, cumulative, disjunctive	OR-Tools, OPL	
IklassovMR023 [590] Details On the Study of Curriculum Learning for Inferring Dispatching Policies on the Job Shop Scheduling	9	0.00 0.00 0.29	job, scheduling, machine, order, task, resource	constraint programming, CP	reinforcement learning, neural network, deep learning, machine learning	robot	benchmark, real-world, github		make-span, job-shop, completion-time, stochastic, preemptive, precedence, transportation, multi-agent, flow-time, tardiness, distributed, preempt	disjunctive, cumulative, cycle	OR-Tools	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
JuvinHHL23 [607] Details An Efficient Constraint Programming Approach to Preemptive Job Shop Scheduling	16	2.00 2.00 17.26	task, job, scheduling, resource, machine, order	CP, constraint programming, propagation, CSP, constraint satisfaction, constraint propagation	edge-finding, genetic algorithm, not-last, not-first		benchmark, github, supplementary material	JSSP, parallel machine	preempt, preemptive, job-shop, cmax, precedence, make-span, Logic-Based Benders Decomposition, due-date, flow-shop, Benders Decomposition, completion-time, setup-time	noOverlap, PreemptiveNoOverlap, disjunctive, alldifferent, Disjunctive constraint, endBeforeStart, AllDiffPrec constraint, cumulative	CPO, Mistral	
JuvinHL23 [609] Details Constraint Programming for the Robust Two-Machine Flow-Shop Scheduling Problem with Budgeted Uncertainty	16	1.50 1.50 5.91	machine, job, scheduling, order, task	CP, constraint programming			real-world		make-span, completion-time, flow-shop, precedence, cmax, stochastic, tardiness, job-shop, Infeasible, setup-time, breakdown	endBeforeStart, noOverlap	Cplex, CPO	
KameugneFND23 [616] Details Horizontally Elastic Edge Finder Rule for Cumulative Constraint Based on Slack and Density	17	0.00 0.00 7.16	task, resource, scheduling, order, machine	CP, propagation, constraint programming, CLP	edge-finder, edge-finding, not-last, not-first, energetic reasoning, sweep, time-tabling, lazy clause generation		benchmark	CuSP, RCPSP, Resource-constrained Project Scheduling Problem, psplib	completion-time, cmax, precedence, make-span, preempt, explanation	cumulative, Disjunctive constraint, Cumulatives constraint, disjunctive	Choco Solver, CHIP	
KimCMLLP23 [632] Details Iterated Greedy Constraint Programming for Scheduling Steelmaking Continuous Casting	16	1.00 1.00 7.40	scheduling, machine, job, order	CP, constraint programming, propagation	large neighborhood search, mat heuristic, genetic algorithm, meta heuristic, Lagrangian relaxation		real-world, zenodo, benchmark	SCC, parallel machine	tardiness, earliness, job-shop, transportation, setup-time, distributed, due-date, open-shop, precedence, make-span	noOverlap	OR-Tools, Gurobi	steel industry

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Mehdizadeh-Somarin23 [804] Details A Constraint Programming Model for a Reconfigurable Job Shop Scheduling Problem with Machine Availability	14	2.50 2.50 6.08	scheduling, machine, job, order, task	CP, constraint programming	simulated annealing, meta heuristic, machine learning, reinforcement learning, genetic algorithm	robot, COVID	random instance	JSSP, single machine, parallel machine	make-span, job-shop, completion-time, re-scheduling, cmax, online scheduling, flow-shop, unavailability, periodic, stochastic, sustainability, preempt, reactive scheduling, bi-objective, setup-time, multi-agent, tardiness, preemptive, precedence, single-machine scheduling		Cplex	
PerezGSL23 [935] Details A Constraint Programming Model for Scheduling the Unloading of Trains in Ports	7	1.00 1.00 0.94	scheduling, order, machine, resource, task, activity	constraint programming, CP, propagation	large neighborhood search, mat heuristic, meta heuristic	container terminal, nurse, operating room, steel mill	generated instance, real-world		make-span, transportation, re-scheduling, inventory, completion-time	cumulative, table constraint	OPL	
PovedaAA23 [958] Details Partially Preemptive Multi Skill/Mode Resource-Constrained Project Scheduling with Generalized Precedence Relations and Calendars	21	0.00 0.00 21.13	resource, scheduling, task, activity, order, job	CP, constraint programming, propagation	large neighborhood search, simulated annealing, GRASP, lazy clause generation, meta heuristic, genetic algorithm	aircraft, automotive	benchmark, github, industrial instance, real-world, real-life	RCPSP, Resource-constrained Project Scheduling Problem	preempt, preemptive, precedence, make-span, job-shop, unavailability, Infeasible, Benders Decomposition, release-date	cumulative, Calendar constraint, disjunctive	Chuffed, MiniZinc, CPO, Cplex	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
SquillaciPR23 [1098] Details Scheduling Complex Observation Requests for a Constellation of Satellites: Large Neighborhood Search Approaches	17	0.00 0.00 1.44	scheduling, order, task, activity, resource	CP, constraint program- ming	large neigh- borhood search, meta heuristic, neural network, GRASP, simulated annealing, column generation	satellite, earth observation, airport, earth orbit	github, benchmark	EOSP, OSP, Earth Observation Scheduling Problem	periodic, Infeasible, distributed, multi- objective, multi-agent, Over- constrained	noOverlap	Cplex	
TardivoDFMP23 [1128] Details Constraint Propagation on GPU: A Case Study for the Cumulative Constraint	18	0.00 0.00 2.78	resource, scheduling, activity, order, task	propaga- tion, CP, constraint propaga- tion, CSP, constraint satisfaction, constraint optimiza- tion, constraint program- ming	energetic reasoning, edge- finding, not-last, time- tabling, not-first, sweep, lazy clause generation		benchmark, bitbucket, github, real-world	psplib, RCPSP, CuSP	precedence, make-span, preempt	cumulative, disjunctive, Cumula- tives constraint	Gecode, MiniZinc, CHIP	
TasselGS23 [1130] Details An End-to-End Reinforcement Learning Approach for Job-Shop Scheduling Problems Based on Constraint Programming	9	2.00 2.00 12.18	job, scheduling, machine, order, resource, task	CP, constraint program- ming, propaga- tion, constraint optimiza- tion	neural network, re- inforcement learning, genetic algorithm, machine learning, meta heuristic, large neigh- borhood search, simulated annealing		benchmark, real-world, industrial instance, github, sup- plementary material	JSSP	make-span, job-shop, flow-shop, completion- time, flow-time, re- scheduling, precedence, tardiness, preempt, periodic	noOverlap, disjunctive, cumulative	Choco Solver	
Tnshoff2023 [1175] Details One Model, Any CSP: Graph Neural Networks as Fast Global Search Heuristics for Constraint Satisfaction	9	0.00 1.00 0.30	task, order, machine	CSP, constraint satisfaction, constraint propaga- tion, propagation	neural network, re- inforcement learning, machine learning, deep learning		benchmark, github, random instance, generated instance		stochastic	cumulative		

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
WangB23 [1219] Details Dynamic All-Different and Maximal Cliques Constraints for Fixed Job Scheduling	8	0.00 0.00 3.45	task, resource, scheduling, order, job	CP, propagation, constraint programming, constraint propagation	genetic algorithm, lazy clause generation	aircraft, airport, gate allocation, crew-scheduling, operating room	random instance, real-world	FJS, Fixed Job Scheduling	unavailability, transportation	WeightAllDiff, MinWeightAllDiff, Channeling constraint, alldifferent	Gurobi	
YuraszeckMC23 [1267] Details A competitive constraint programming approach for the group shop scheduling problem	6	1.00 1.00 2.86	scheduling, job, machine, order	CP, constraint programming	meta heuristic, ant colony		benchmark, github	JSSP, OSSP	make-span, cmax, stochastic, open-shop, precedence, job-shop, release-date, distributed, preempt, due-date, preemptive, flow-time	noOverlap		
ArmstrongGOS22 [53] Details A Two-Phase Hybrid Approach for the Hybrid Flexible Flowshop with Transportation Times	13	0.00 0.00 4.30	job, machine, scheduling, order, resource, task	CP, constraint programming, propagation	NEH, IGT, meta heuristic, mat heuristic, GRASP		real-world, benchmark	HFF, HFFTT, parallel machine, HFS	transportation, make-span, flow-shop, cmax, no-wait, re-scheduling, explanation, completion-time	noOverlap, cumulative	OPL, SICStus	
BoudreaultSLQ22 [206] Details A Constraint Programming Approach to Ship Refit Project Scheduling	16	1.00 1.00 12.21	task, resource, scheduling, order, activity, machine	CP, constraint programming, propagation, COP, constraint propagation	meta heuristic, lazy clause generation, edge-finding, large neighborhood search, not-first, not-last, energetic reasoning	offshore	benchmark, industrial partner, github, gitlab, generated instance, real-world, supplementary material, real-life	RCPSP, Resource-constrained Project Scheduling Problem, psplib	precedence, make-span, cmax, explanation, multi-objective, transportation, distributed, Unsatisfiable, Over-constrained, preempt	cumulative, disjunctive, Cumulatives constraint, Disjunctive constraint	Chuffed, MiniZinc, OR-Tools, OPL	repair industry, ship repair industry

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
GeitzGSSW22 [448] Details Solving the Extended Job Shop Scheduling Problem with AGVs - Classical and Quantum Approaches	18	0.00 0.00 12.11	task , machine , job , scheduling , resource , order	CP , constraint programming , propagation, constraint propagation, constraint satisfaction, CLP	simulated annealing, lazy clause generation, meta heuristic, machine learning, sweep, not-last	robot	github, real-world, real-life	JSSP , single machine, RCPSP	transportation , job-shop , make-span , setup-time , sequence dependent setup, precedence, batch process, lateness, preemptive, completion- time, preempt, producer/con- sumer	cumulative	OPL	
HebrardALL- CMR22 [530] Details An Efficient Approach to Data Transfer Scheduling for Long Range Space Exploration	7	0.00 0.00 0.00	order , scheduling , activity		sweep	round- robin, deep space			no-buffer , Unsatisfi- able	cumulative	Claire	
JungblutK22 [603] Details Optimal Schedules for High-Level Programming Environments on FPGAs with Constraint Programming	4	0.00 0.00 0.48	task , scheduling , machine , order , resource	constraint program- ming, CP			github, benchmark, real-world		distributed, make-span, preempt	circuit	MiniZinc	
Koriche2022 [650] Details Best Heuristic Identification for Constraint Satisfaction	7	0.00 1.50 1.04	order , task , activity, scheduling	CSP , constraint satisfaction , CP, constraint program- ming, propaga- tion, constraint propagation		tournament	benchmark, github		stochastic , Infeasible, Unsatisfi- able	cumulative		
KotaryFH22 [652] Details Fast Approximations for Job Shop Scheduling: A Lagrangian Dual Deep Learning Method	8	0.00 0.00 4.01	task , machine , job , order , scheduling , resource	CP , constraint program- ming, constraint satisfaction	neural network , deep learning , machine learning, Lagrangian relaxation	pipeline	benchmark, github		precedence , make-span , job-shop , stochastic, Infeasible	disjunctive, Disjunctive constraint, cycle	Z3

AronssonBK09 [55] Details MILP formulations of cumulative constraints for railway scheduling - A comparative study	13	0.00 1.49	task, job, order	CP, constraint programming, propagation, CLP	sweep	railway	real-world, real-life		job-shop, transportation	cumulative	Cplex, CHIP	
Baptiste09 [86] Details Constraint-Based Schedulers, Do They Really Work?	1	0.00 0.00 0.03	scheduling	CP								
Bittle2009 [170] Details Learning and using hyper-heuristics for variable and value ordering in constraint satisfaction problems	4	0.50 0.50 0.69	order, scheduling, job, machine	constraint satisfaction, CSP, propagation, CP, constraint programming	machine learning, meta heuristic, genetic algorithm, time-tabling		benchmark		job-shop, distributed			
Cucu-Grosjean2009 [297] Details Global Multiprocessor Real-Time Scheduling as a Constraint Satisfaction Problem	8	1.00 1.00 13.65	task, scheduling, order, job, resource	CSP, constraint satisfaction, propagation, constraint propagation, constraint programming			real-world		periodic, preempt, Infeasible, preemptive, distributed		Choco Solver	
FelizariAL09 [400] Details Sequencing Batches in a Real-World Pipeline Network Using Constraint Programming	6	0.00 5.00 3.14	scheduling, order, task, activity, resource	CLP, constraint logic programming, CP, constraint programming, constraint propagation, propagation, constraint satisfaction		pipeline	real-world		explanation		OPL	oil industry
GrimesHM09 [482] Details Closing the Open Shop: Contradicting Conventional Wisdom	9	0.00 0.00 1.03	task, job, scheduling, order, machine, resource	propagation, constraint programming, CP, CSP, constraint satisfaction, constraint propagation	edge-finding, particle swarm, not-last, meta heuristic		benchmark	OSP, Open Shop Scheduling Problem	open-shop, job-shop, make-span, precedence	disjunctive, Disjunctive constraint, Balance constraint	Mistral, Choco Solver, Ilog Scheduler	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Hachemi2009 [502] Details A Hybrid LS/CP Approach to Solve the Weekly Log-Truck Scheduling Problem	2	1.00 1.00 0.09	scheduling, order	CP, constraint program- ming					transporta- tion, inventory			
Hu2009 [581] Details A Hybrid GA-CP Approach for Production Scheduling	6	1.00 1.00 2.57	scheduling, job, order, resource, machine	CP, constraint program- ming, constraint satisfaction, propaga- tion, constraint propaga- tion, CSP	genetic algorithm				stock level, inventory, tardiness, due-date, stochastic, transporta- tion		Ilog Solver	
Laborie09 [675] Details IBM ILOG CP Optimizer for Detailed Scheduling Illustrated on Three Problems	15	1.00 1.00 8.01	task, scheduling, resource, job, machine, order, activity	CP, constraint program- ming, propaga- tion, constraint propagation	large neigh- borhood search, genetic algorithm	satellite, aircraft	benchmark, real-world		tardiness, earliness, preempt, preemptive, release- date, inventory, Over- constrained, sequence dependent setup, due-date, precedence, job-shop, setup-time, breakdown	endBefore- eStart, noOverlap, cumulative, disjunctive, alternative constraint	OPL, CPO	
LombardiM09 [746] Details A Precedence Constraint Posting Approach for the RCPSP with Time Lags and Variable Durations	15	0.00 0.00 0.56	resource, activity, scheduling, task, order	CP, constraint propaga- tion, propagation			real-world, instance generator	RCPSP, Resource- constrained Project Scheduling Problem	precedence, stochastic, make-span, completion- time, preempt, Infeasible, preemptive	Balance constraint	Ilog Solver	
MonetteDH09 [840] Details Just-In-Time Scheduling with Constraint Programming	8	1.00 1.00 3.87	activity, machine, job, scheduling, order, task, resource	CP, constraint program- ming, propaga- tion, constraint propagation	large neigh- borhood search, not-last		benchmark		precedence, tardiness, earliness, job-shop, due-date, completion- time, release- date, make-span, preemptive, preempt, distributed	disjunctive, cycle, cumulative		

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
RenT09 [993] Details An improved hybrid MILP/CP algorithm framework for the job-shop scheduling	5	2.00 2.00 4.20	job, machine, scheduling, order	CP, CLP, constraint program- ming, constraint logic pro- gramming		pipeline	real-world		job-shop, Infeasible, batch process, due-date, explana- tion, setup-time		Ilog Scheduler, Cplex	
RodriguezS09 [1009] Details A study of an incremental texture-based heuristic for the train routing and scheduling problem	14	0.00 0.00 1.60	resource, scheduling, activity, order, job, task	propaga- tion, constraint program- ming, constraint propaga- tion, constraint satisfaction	edge-finding	railway, train schedule			job-shop, precedence, completion- time, blocking constraint, Benders Decomposi- tion, no-wait, Logic-Based Benders Decomposi- tion, transporta- tion	circuit, disjunctive, Blocking constraint, Disjunctive constraint	Ilog Scheduler, Ilog Solver	
SchuttFSW09 [1052] Details Why Cumulative Decomposition Is Not as Bad as It Sounds	16	0.00 0.00 2.03	task, resource, scheduling, activity, machine, order, job	propaga- tion, constraint program- ming, CP, CSP, constraint propagation	lazy clause generation, edge-finder		benchmark, real-world	psplib, Resource- constrained Project Scheduling Problem	precedence, explana- tion, preemptive, preempt, make-span, periodic, open-shop	cumulative, disjunctive, Disjunctive constraint	ECLiPSe, CHIP, SICStus	
ThiruvadyBME09 [1144] Details Hybridizing Beam-ACO with Constraint Programming for Single Machine Job Scheduling	15	2.50 2.50 3.67	job, scheduling, machine, order, resource	CP, propa- gation, constraint program- ming, constraint propagation	ant colony, meta heuristic			single machine	stochastic, make-span, Infeasible, due-date, setup-time, single- machine scheduling, open-shop, tardiness	cumulative	Gecode	
Vilim09 [1201] Details Edge Finding Filtering Algorithm for Discrete Cumulative Resources in /emphO/emphkn log /emphn)//textbackslashslashmathcal O/(kn //textbackslashslashrm log/n)	15	0.00 0.00 0.33	activity, resource, scheduling, order, job	propaga- tion, CP	edge- finding, not-first, energetic reasoning, not-last				completion- time, job-shop, preempt, precedence, preemptive	cumulative, cycle	CPO	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Vilim09a [1202] Details Max Energy Filtering Algorithm for Discrete Cumulative Resources	15	0.00 0.00 0.57	activity, resource, scheduling, task, order	propagation, CP, constraint program- ming	edge- finding, energetic reasoning, not-last				completion- time, preemptive, preempt	cumulative, cycle	Ilog Scheduler	
Wolf09 [1241] Details Linear Weighted-Task-Sum – Scheduling Prioritized Tasks on a Single Resource	17	0.00 0.00 2.84	task, order, scheduling, resource, machine, job	CP, constraint program- ming, propaga- tion, COP, constraint optimiza- tion, CLP	sweep, not-last, edge- finding, not-first	surgery, patient, operating room	real-life		preempt, preemptive, job-shop, explanation	Weighted- TaskSum, Weighted- Sum	OPL, CHIP, SICStus	
Xujun2009 [1251] Details Model and Solution for Steelmaking-Continuous Casting Scheduling Problem Based on Constraint Programming Method	4	1.00 1.00 1.72	scheduling, resource, activity, machine, job, order, task	constraint program- ming, CP, constraint satisfaction, propaga- tion, CSP, constraint propagation	time-tabling			parallel machine	make-span, job-shop	Calendar constraint		
AchterbergBKW08 [12] Details Constraint Integer Programming: A New Approach to Integrate CP and MIP	15	0.00 0.00 0.37	order, task, machine, scheduling	CP, propa- gation, CLP, constraint program- ming, constraint logic pro- gramming, constraint propagation	GRASP	semiconduc- tor	benchmark		Infeasible	circuit	SCIP, Cplex, OPL	
BarlattCG08 [99] Details A Hybrid Approach for Solving Shift-Selection and Task-Sequencing Problems	5	0.00 0.00 0.00	task, scheduling, machine, resource, job			automotive, pipeline	real-world		setup-time, Infeasible, job-shop, transporta- tion, flow-shop			
BeldiceanuCP08 [141] Details New Filtering for the cumulative Constraint in the Context of Non-Overlapping Rectangles	15	0.00 0.00 0.61	task, order, scheduling, resource	constraint program- ming, CP, propagation	edge- finding, sweep	perfect- square, rectangle- packing	benchmark		Infeasible	cumulative, disjunctive, geost	OPL, CHIP, SICStus	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Benedetti2008 [148] Details Modeling adversary scheduling with QCSP +	5	0.00 0.00 2.94	resource, scheduling, task, order, activity, job, machine	CSP, prop- agation, constraint program- ming, constraint satisfaction, CP			real-world, benchmark	Partial Order Schedule	make-span, preempt, preemptive, job-shop, precedence, tardiness, stochastic, distributed, multi- objective, Over- constrained, completion- time	cumulative, disjunctive, Disjunctive constraint, Cumula- tives constraint, table constraint	Gecode, CHIP	
BeniniLMMR08 [154] Details Multi-stage Benders Decomposition for Optimizing Multicore Architectures	15	0.00 0.00 0.91	task, scheduling, resource, activity, order, machine	CP, constraint program- ming	column generation			SCC, single machine	Benders Decomposi- tion, make-span, Infeasible, precedence, Logic-Based Benders Decomposi- tion, explana- tion, stochastic, release- date, tardiness, Over- constrained, breakdown	circuit	Ilog Scheduler, Cplex	
BeniniLMR08 [155] Details A Constraint Programming Approach for Allocation and Scheduling on the CELL Broadband Engine	15	1.00 1.00 3.76	task, scheduling, resource, activity, order, machine	CP, constraint program- ming, constraint logic pro- gramming, CSP	simulated annealing	pipeline, medical	benchmark	SCC	precedence, periodic, Benders Decomposi- tion, Logic-Based Benders Decomposi- tion, make-span, distributed, Infeasible, preempt, tardiness, release- date, preemptive	circuit	Ilog Scheduler, Cplex	

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
DoRZ08 [339] Details On-line Planning and Scheduling: An Application to Controlling Modular Printers	5	0.00 0.00 0.13	resource, order, machine, scheduling, job	propagation		robot	real-world, industrial partner		make-span, order scheduling, distributed, stochastic			
DoomsH08 [344] Details Gap Reduction Techniques for Online Stochastic Project Scheduling	16	0.00 0.00 0.00	job, activity, scheduling, resource, task, order, machine					RCPSP	stochastic, completion- time, explana- tion, online scheduling, job-shop			service industry
Hachemi2008 [501] Details Solving a Log-Truck Scheduling Problem with Constraint Programming	5	1.00 1.00 0.39	scheduling, resource, activity	CP, constraint program- ming, propagation		forestry			transporta- tion	Cardinality constraint	OPL	forest industry
HentenryckM08 [546] Details The Steel Mill Slab Design Problem Revisited	5	0.00 0.00 0.15	order	CSP, CP, constraint program- ming	large neigh- borhood search	steel mill	CSPLib			bin-packing		
Hunsberger08 [584] Details A Practical Temporal Constraint Management System for Real-Time Applications	5	0.00 0.00 0.25	scheduling, task, order	propaga- tion, constraint propagation			real-world		multi-agent, distributed	cycle		
LauLN08 [692] Details A Combinatorial Auction Framework for Solving Decentralized Scheduling Problems (Extended Abstract)	5	0.00 0.00 0.00	scheduling, resource, job, order, machine		Lagrangian relaxation		real-world, benchmark		job-shop, inventory, distributed, transporta- tion, flow-shop			
Malik2008 [792] Details An Application of Constraint Programming to Superblock Instruction Scheduling	15	1.00 1.00 1.37	scheduling, order, resource	constraint program- ming, propaga- tion, CP, constraint propaga- tion, constraint satisfaction		pipeline	benchmark		completion- time	cycle, GCC constraint, Cardinality constraint		

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
MouraSCL08 [851] Details Planning and Scheduling the Operation of a Very Large Oil Pipeline Network	16	0.00 0.00 1.61	order , scheduling , activity , resource	CP, propagation, constraint programming	max-flow, genetic algorithm	pipeline			transportation, precedence, preempt, inventory, Infeasible, distributed, Over-constrained, preemptive	disjunctive, table constraint, Element constraint, Channeling constraint, cycle	Ilog Scheduler, Ilog Solver	
MouraSCL08a [850] Details Heuristics and Constraint Programming Hybridizations for a Real Pipeline Planning and Scheduling Problem	8	1.00 1.00 1.51	order , scheduling , resource	CP, constraint programming, propagation, constraint satisfaction, CLP, constraint propagation	genetic algorithm, MINLP, meta heuristic	pipeline	real-world , benchmark		inventory, due-date, transportation, distributed, Infeasible, reactive scheduling, Over-constrained, re-scheduling	disjunctive, channeling constraint, cumulative	Ilog Scheduler, Ilog Solver	
PoderB08 [951] Details Filtering for a Continuous Multi-Resources cumulative Constraint with Resource Consumption and Production	8	0.00 0.00 1.07	task , resource , scheduling , order , activity	CP, propagation, constraint propagation	sweep				producer/consumer, release-date, due-date, preemptive, preempt	cumulative	CHIP	
SchausD08 [1041] Details A Global Constraint for Bin-Packing with Precedences: Application to the Assembly Line Balancing Problem	6	0.00 0.00 0.93	task , order	CP, constraint programming, CSP, propagation, constraint propagation	large neighborhood search		benchmark, real-life		precedence , preempt , preemptive	bin-packing , IloPack , cycle , Reified constraint, Element constraint	Ilog Solver, OPL	
Terashima-Marn2008 [1135] Details Hyper-heuristics for the dynamic variable ordering in constraint satisfaction problems	8	0.50 0.50 0.65	order , scheduling , machine, task	CSP, constraint satisfaction , CP	genetic algorithm, meta heuristic, machine learning	tournament	benchmark, generated instance		Over-constrained, distributed	bin-packing , cycle		
Terashima-Marn2008a [1136] Details Using Hyper-heuristics for the Dynamic Variable Ordering in Binary Constraint Satisfaction Problems	11	0.50 0.50 0.32	order , scheduling , machine	CSP, constraint satisfaction, CP	genetic algorithm, meta heuristic, machine learning		benchmark			bin-packing , cycle		

Table 3: Extracted Features for PAPER (Total 527)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
WatsonB08 [1227] Details A Hybrid Constraint Programming / Local Search Approach to the Job-Shop Scheduling Problem	15	2.00 2.00 1.44	scheduling, job, order, machine, resource	CP, constraint programming, propagation, constraint propagation, constraint satisfaction	meta heuristic, simulated annealing		benchmark, real-world		make-span, job-shop, periodic, explanation, completion-time, cmax	disjunctive	Ilog Scheduler	
AkkerDH07 [1184] Details A Column Generation Based Destructive Lower Bound for Resource Constrained Project Scheduling Problems	15	0.00 0.00 1.14	job, resource, machine, scheduling, order	constraint programming, constraint satisfaction	column generation, simulated annealing			single machine, parallel machine, Resource-constrained Project Scheduling Problem, RCPSP	release-date, precedence, unavailability, no-wait, lateness, make-span, completion-time, planned maintenance, due-date, cmax, sequence dependent setup, preempt, preemptive	cumulative	Cplex	
BeldiceanuP07 [143] Details A Continuous Multi-resources /emphcumulative Constraint with Positive-Negative Resource Consumption-Production	15	0.00 0.00 3.19	task, resource, scheduling, order	CP, constraint programming, propagation	sweep				preempt, preemptive, release-date, due-date	cumulative, disjunctive		
BidotVLB07 [165] Details A General Framework for Scheduling in a Stochastic Environment	6	0.00 0.00 0.21	scheduling, resource, activity, order, job, task	propagation, constraint programming, constraint satisfaction		robot	real-life		stochastic, re-scheduling, make-span, job-shop, tardiness, periodic, reactive scheduling, precedence

PrataAN23 [961] Details Applications of constraint programming in production scheduling problems: A descriptive bibliometric analysis	17	1.00 1.00 54.10	scheduling, job, machine, resource, order, task, activity	constraint programming, CP	meta heuristic, genetic algorithm, mat heuristic, machine learning, time-tabling, large neighborhood search, memetic algorithm, reinforcement learning, particle swarm	robot, dairy, energy-price, aircraft	real-world, benchmark, real-life	parallel machine, single machine, Open Shop Scheduling Problem	job-shop, flow-shop, make-span, tardiness, open-shop, distributed, setup-time, completion-time, earliness, no-wait, energy efficiency, flow-time, order scheduling, lateness, multi-objective, release-date, single-machine scheduling, due-date, preempt, preemptive, Logic-Based Benders Decomposition, batch process, precedence, re-scheduling, Benders Decomposition, bi-objective, sequence dependent setup, online scheduling, stochastic, inventory	cumulative, circuit	CHIP	manufacturing industry

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Sciau2024 [1062] Details Using constraint programming to address the operational aircraft line maintenance scheduling problem	20	1.00 1.00 83.20	task, resource, scheduling, order, activity, job, machine	CP, constraint programming, CSP, constraint satisfaction, COP	column generation, time-tabling, genetic algorithm, reinforcement learning	aircraft, maintenance scheduling, airport, crew-scheduling, robot	benchmark, github, industrial instance, real-world	RCPSP, Resource-constrained Project Scheduling Problem, psplib	precedence, periodic, make-span, multi-objective, due-date, stochastic, inventory, unavailability, preempt, preemptive, re-scheduling, Infeasible, Unsatisfiable, Over-constrained, sustainability, transportation, distributed	cumulative, disjunctive, diffn, Disjunctive constraint, alldifferent, cycle, circuit, table constraint, bin-packing	OPL, Choco Solver, Cplex, MiniZinc, CHIP, Gurobi, OR-Tools	airline industry
Sun2024 [1108] Details Enhancing constraint programming via supervised learning for job shop scheduling	13	2.00 2.00 20.74	order, job, machine, scheduling, task, resource, activity	CP, constraint programming, constraint satisfaction, constraint optimization, propagation, constraint propagation	machine learning, reinforcement learning, neural network, meta heuristic, column generation, quadratic programming, deep learning, ant colony, genetic algorithm	semiconductor	benchmark, github, generated instance, random instance	single machine	job-shop, cmax, tardiness, make-span, due-date, completion-time, precedence, distributed, setup-time, flow-shop, energy efficiency, multi-objective	disjunctive, Disjunctive constraint, cumulative	OR-Tools, Cplex	
Xu2024 [1250] Details A Hybrid Genetic Algorithm for Ground Station Scheduling Problems	19	0.00 2.50 1.97	task, resource, scheduling, order, job	constraint satisfaction, constraint optimization, constraint programming	genetic algorithm, particle swarm, neural network, ant colony	satellite, tournament, earth observation	benchmark		multi-objective, re-scheduling, preempt, make-span, flow-shop, distributed, stochastic		OPL	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Zhang2024 [1297] Details Automatic constraint programming solver selection method based on machine learning for the cable tree wiring problem	15	0.50 1.00 4.83	machine, task, job, scheduling, order, resource	CP, constraint programming, propagation, constraint propagation, constraint satisfaction	machine learning, neural network, deep learning, meta heuristic, reinforcement learning	cable tree, robot, automotive	real-world, benchmark, github	CTW, JSSP	precedence, Unsatisfiable, multi-agent, distributed, job-shop, breakdown	disjunctive, cumulative, Disjunctive constraint, circuit, Among constraint	Cplex, OR-Tools, Chuffed, Gurobi, MiniZinc, OPL, Gecode, Choco Solver, CPO, SCIP	automotive industry
Ziadlou2024 [1307] Details Network configuration distributed production scheduling problem: A constraint programming approach	23	1.00 1.00 44.20	job, scheduling, machine, order, resource, task, activity	CP, constraint programming, constraint satisfaction, CSP, propagation, constraint propagation, COP	meta heuristic, genetic algorithm, particle swarm, simulated annealing, time-tabling	semiconductor	generated instance, github, real-world, random instance	parallel machine, single machine, FJS	distributed, flow-shop, cmax, completion-time, transportation, job-shop, Pareto, bi-objective, tardiness, multi-objective, earliness, make-span, precedence, explanation, stochastic, setup-time, sequence dependent setup, preempt, breakdown, no preempt, blocking constraint, sustainability, due-date, order scheduling	endBeforeStart, noOverlap, Blocking constraint	OPL, Cplex	automobile industry, service industry

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Zou2024 [1313] Details Resource-constrained repetitive project scheduling with soft logic	33	0.00 2.50 22.33	resource, activity, scheduling, order, task	CP, constraint programming, constraint propagation, propagation, CSP, constraint satisfaction	genetic algorithm, meta heuristic, simulated annealing, particle swarm	construction project, civil engineer, railway, pipeline, construction scheduling	instance generator, benchmark	RCPSP, Resource-constrained Project Scheduling Problem, RCMPSP	multi-objective, precedence, explanation, completion-time, stochastic, bi-objective, Infeasible, multi-agent, distributed, preempt, Pareto, make-span, preemptive	noOverlap, endBeforeStart, cumulative	Cplex	construction industry
abs-2402-00459 [880] Details Genetic-based Constraint Programming for Resource Constrained Job Scheduling	21	2.50 2.50 10.36	job, scheduling, machine, resource, order, task	CP, constraint programming	machine learning, meta heuristic, mat ant colony, simulated annealing, reinforcement learning, column generation, genetic algorithm, particle swarm, Lagrangian relaxation, neural network, quadratic programming	tournament	benchmark, github, instance generator, real-world, generated instance	single machine, Resource-constrained Project Scheduling Problem	job-shop, precedence, tardiness, net present value, due-date, multi-objective, Infeasible, multi-agent, earliness, completion-time	cumulative, Disjunctive constraint, disjunctive, bin-packing	OR-Tools, OPL	mining industry

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
AbreuNP23 [315] Details A new two-stage constraint programming approach for open shop scheduling problem with machine blocking	20	1.50 1.50 44.59	machine, job, scheduling, order, resource	CP, constraint program- ming	meta heuristic, genetic algorithm, large neigh- borhood search, mat heuristic, simulated annealing, time-tabling	medical	benchmark, real-world	OSSP, Open Shop Scheduling Problem, parallel machine	open-shop, make-span, blocking constraint, cmax, job-shop, no-wait, setup-time, completion- time, flow-shop, distributed, tardiness, no-buffer, transporta- tion, Infeasible, preempt, earliness, two- machine scheduling, energy efficiency, stochastic	Blocking constraint, noOverlap	Cplex, OPL	oil industry
AbreuPNF23 [8] Details A constraint programming-based iterated greedy algorithm for the open shop with sequence-dependent processing times and makespan minimization	12	0.00 5.00 28.79	job, machine, scheduling, order, resource	CP, constraint program- ming, constraint propaga- tion, propagation	meta heuristic, mat heuristic, genetic algorithm, NEH, lazy clause generation, ant colony, large neigh- borhood search, simulated annealing	medical, robot	benchmark, real-world, real-life	OSSP, Open Shop Scheduling Problem, parallel machine, RCPSP	open-shop, make-span, setup-time, completion- time, flow-shop, tardiness, distributed, transporta- tion, bi- objective, preempt, preemptive, job-shop, order scheduling, multi- objective, due-date, no-wait, stochastic, sustainabil- ity, no-buffer, periodic, earliness	cumulative, disjunctive, noOverlap	Cplex, OPL	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Adelgren2023 [16] Details On the utility of production scheduling formulations including record keeping variables	12	0.00 0.00 1.69	scheduling, task, order, machine, job, resource	constraint programming, CP, propagation	MINLP, column generation	drone, crew-scheduling, aircraft, operating room, pipeline	supplementary material, benchmark, real-life, github, generated instance	parallel machine	inventory, setup-time, preempt, preemptive, make-span, job-shop, distributed, release-date, sequence dependent setup, transportation, periodic, batch process, completion-time, re-scheduling	disjunctive	Cplex, Gurobi	
AfsarVPG23 [17] Details Mathematical models and benchmarking for the fuzzy job shop scheduling problem	14	0.00 0.00 22.09	job, scheduling, task, machine, order, resource, activity	CP, constraint programming, propagation	meta heuristic, genetic algorithm, memetic algorithm, particle swarm, reinforcement learning, neural network		benchmark, real-life, supplementary material, real-world		job-shop, make-span, multi-objective, due-date, stochastic, transportation, completion-time, precedence, bi-objective, setup-time, preempt, flow-shop, open-shop	disjunctive	Cplex	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Akan2023 [27] Details Optimizing Shipbuilding Production Project Scheduling Under Resource Constraints Using Genetic Algorithms and Fuzzy Sets	22	0.00 0.00 1.60	resource, scheduling, activity, order, task, job, machine	constraint propagation, propagation, constraint satisfaction, CP	genetic algorithm, meta heuristic, ant colony, particle swarm, simulated annealing, column generation, memetic algorithm, machine learning	construction project, business process, offshore, civil engineer, construction scheduling	real-world, supplementary material, benchmark	RCPSP, Resource-constrained Project Scheduling Problem, psplib	completion-time, Pareto, make-span, multi-objective, transportation, distributed, precedence, tardiness, multi-agent, flow-time, flow-shop, preemptive, Infeasible, lateness, earliness, preempt, net present value, inventory, setup-time, due-date, sustainability, reactive scheduling, stochastic, manpower, bi-objective	disjunctive, cycle		
AkramNHRSA23 [28] Details Joint Scheduling and Routing Optimization for Deterministic Hybrid Traffic in Time-Sensitive Networks Using Constraint Programming	16	1.00 1.00 7.96	scheduling, task, machine, order, resource	CP, constraint programming, propagation	genetic algorithm, reinforcement learning, machine learning, deep learning, GRASP, ant colony, simulated annealing	medical, agriculture	benchmark		distributed, periodic, completion-time, preempt	cycle, bin-packing	OR-Tools	
AlakaP23 [31] Details Balancing of cost-oriented U-type general resource-constrained assembly line: new constraint programming models	14	0.50 0.50 23.23	resource, task, scheduling, machine, order	CP, constraint programming, constraint propagation, propagation	genetic algorithm, meta heuristic, ant colony, time-tabling	robot	real-life		stochastic, precedence, multi-objective, make-span, cyclic scheduling	cycle	Cplex	garment industry

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
AlfieriGPS23 [35] Details Permutation flowshop problems minimizing core waiting time and core idle time	13	0.00 2.00 5.78	job, machine, scheduling, order, resource	CP, constraint program- ming, propagation	NEH, meta heuristic, mat heuristic, ant colony, particle swarm, memetic algorithm	surgery, patient	benchmark	single machine, parallel machine	flow-shop, make-span, completion- time, tardiness, no-wait, precedence, flow-time, setup-time, single- machine scheduling, job-shop, earliness, multi- objective, stochastic, transporta- tion, inventory, Benders Decomposi- tion, distributed		Cplex	
Bocewicz2023 [180] Details Project Portfolio Planning Taking into Account the Effect of Loss of Competences of Project Team Members	19	0.00 1.50 1.65	task, order, scheduling, resource, job, activity, machine	constraint program- ming, constraint satisfaction, CP, CSP	genetic algorithm, meta heuristic, machine learning	nurse		Resource- constrained Project Scheduling Problem, RCPSP	multi- objective, distributed, stochastic, multi-agent, re- scheduling, sustainabil- ity, job-shop, precedence, preempt, periodic	cycle	Z3, OPL, Gurobi	
Caballero23 [229] Details Scheduling through logic-based tools	1	0.00 0.00 0.00	scheduling, resource					RCPSP, Resource- constrained Project Scheduling Problem				

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
CzerniachowskaWZ23 [298] Details Constraint Programming for Flexible Flow Shop Scheduling Problem with Repeated Jobs and Repeated Operations	14	2.00 2.00 8.41	machine, job, scheduling, task, order, resource, activity	constraint programming, CP, constraint satisfaction	meta heuristic, particle swarm	robot, automotive	benchmark, real-world, Roadev	parallel machine, PTC, JSSP	flow-shop, job-shop, make-span, transportation, setup-time, multi-objective, completion-time, periodic, sustainability, Pareto	endBeforeStart, noOverlap	Cplex, CPO, OPL	pharmaceutical industry, manufacturing industry, automotive industry
Danzinger2023 [304] Details A System for Automated Industrial Test Laboratory Scheduling	27	0.00 5.00 34.19	task, scheduling, job, resource, order, activity, machine	CP, constraint programming, constraint logic programming	simulated annealing, meta heuristic, large neighborhood search, time-tabling	automotive	industrial partner, real-world, benchmark, real-life, generated instance, github, random instance	RCPSP, Resource-constrained Project Scheduling Problem	due-date, completion-time, make-span, setup-time, precedence, release-date, re-scheduling, Infeasible, distributed, explanation, batch process	cumulative, span constraint, Cardinality constraint, cycle	MiniZinc, Chuffed, CHIP	
Dimny2023 [335] Details Comparison of MILP and CP models for balancing partially automated assembly lines	15	0.00 5.00 7.93	task, resource, scheduling, order, activity, machine	CP, constraint programming	genetic algorithm, simulated annealing, meta heuristic	robot	real-world, benchmark		precedence, Benders Decomposition, multi-objective, Infeasible	cycle, bin-packing	Cplex, Z3	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Eiter2023 [362] Details Answer-Set Programming for Lexicographical Makespan Optimisation in Parallel Machine Scheduling	26	0.00 6.01 3.81	machine, job, scheduling, order, resource	CP, constraint programming, propagation	genetic algorithm, machine learning, meta heuristic	train schedule, semiconductor, railway	random instance, benchmark, real-life, github, real-world, instance generator	parallel machine, single machine	make-span, setup-time, completion-time, release-date, sequence dependent setup, cmax, multi-objective, job-shop, re-scheduling, transportation, distributed, preempt, precedence, due-date	alldifferent	CPO, Cplex, MiniZinc, OR-Tools, Gecode	
Fatemi-AnarakiTFV23 [397] Details Scheduling of Multi-Robot Job Shop Systems in Dynamic Environments: Mixed-Integer Linear Programming and Constraint Programming Approaches	15	2.00 2.00 26.16	job, scheduling, machine, task, resource, order	CP, constraint programming, constraint propagation	meta heuristic, ant colony, mat heuristic, time-tabling	robot, hoist, electroplating, semiconductor, COVID	real-world, random instance, github	parallel machine, single machine	job-shop, no-wait, re-scheduling, cmax, completion-time, cyclic scheduling, transportation, distributed, breakdown, make-span, multi-agent, Infeasible, single-machine scheduling, setup-time	bin-packing, circuit, cycle, disjunctive	Cplex, OPL	food industry
FrimodigECM23 [418] Details Comparing Optimization Methods for Radiation Therapy Patient Scheduling using Different Objectives	38	0.00 0.00 11.72	machine, scheduling, order, resource, task, activity	CP, constraint programming, constraint satisfaction, propagation	column generation, lazy clause generation, large neighborhood search	patient, medical, radiation therapy, surgery, nurse, operating room, physician	benchmark, real-world, instance generator		stochastic, multi-objective, setup-time, Pareto, unavailability, distributed	bin-packing, cumulative	Gecode, MiniZinc, Chuffed, Cplex	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
GokPTGO23 [466] Details Constraint-based robust planning and scheduling of airport apron operations through simheuristics	36	0.00 0.00 5.61	task, resource, scheduling, activity, order, machine, job	CP, propagation, constraint programming, constraint satisfaction	meta heuristic, machine learning, genetic algorithm, reinforcement learning, large neighborhood search	airport, aircraft, offshore, workforce scheduling	real-world, github	RCPSP, Resource-constrained Project Scheduling Problem	stochastic, tardiness, precedence, completion-time, distributed, setup-time, transportation, Infeasible, inventory, multi-objective, bi-objective, Pareto, make-span, multi-agent, re-scheduling, job-shop	cumulative, alldifferent, circuit, disjunctive, cycle	OPL	airline industry
GuoZ23 [498] Details Capacity reservation for humanitarian relief: A logic-based Benders decomposition method with subgradient cut	29	0.00 0.00 0.20	order, scheduling, resource, machine, job, activity, task	constraint programming, constraint optimization	machine learning, column generation, ant colony	COVID, automotive, operating room, medical, vaccine, patient, railway, drone, physician	supplementary material, real-world, benchmark, github	parallel machine	stochastic, inventory, transportation, Benders Decomposition, Logic-Based Benders Decomposition, distributed, Infeasible, setup-time, unavailability, sequence dependent setup, job-shop, make-span, multi-objective	bin-packing, cycle, Balance constraint	OPL, Cplex, Gurobi, SCIP	automotive industry, garment industry
GurPAE23 [499] Details Operating room scheduling with surgical team: a new approach with constraint programming and goal programming	25	1.00 1.00 4.04	scheduling, resource, order, machine	CP, constraint programming, propagation	meta heuristic, neural network, machine learning	operating room, patient, nurse, surgery, physician, COVID	real-life		stochastic, multi-objective, re-scheduling, bi-objective, distributed, inventory	cumulative	Cplex, OPL	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Hajji2023 [504] Details Makespan Minimization for the Two-Stage Hybrid Flow Shop Problem with Dedicated Machines: A Comprehensive Study of Exact and Heuristic Approaches	25	0.00 2.50 14.44	job, machine, scheduling, order, resource, task	constraint programming, CP, constraint satisfaction, CSP, propagation, constraint propagation	meta heuristic, genetic algorithm, machine learning, simulated annealing, ant colony	nurse, semi-conductor, construction scheduling	real-world, real-life, generated instance, random instance, Roadeff	parallel machine, single machine, FJS	cmax, flow-shop, make-span, completion-time, distributed, job-shop, setup-time, preempt, no-wait, transportation, release-date, precedence, due-date, stochastic, multi-objective	noOverlap, circuit	OR-Tools, Cplex, OPL	manufacturing industry, paper industry, construction industry
IsikYA23 [592] Details Constraint programming models for the hybrid flow shop scheduling problem and its extensions	28	1.00 1.00 80.43	scheduling, machine, job, order, resource, task	CP, constraint programming, propagation, constraint propagation, constraint satisfaction, constraint logic programming	meta heuristic, genetic algorithm, simulated annealing, reinforcement learning, ant colony, Lagrangian relaxation, particle swarm, NEH, machine learning, energetic reasoning, GRASP, memetic algorithm, mat heuristic, neural network	robot, medical	benchmark, generated instance, real-world, real-life	HFS, parallel machine, single machine	flow-shop, setup-time, no-wait, make-span, cmax, multi-objective, tardiness, precedence, due-date, bi-objective, distributed, job-shop, sequence dependent setup, energy efficiency, completion-time, preempt, transportation, blocking constraint, explanation, earliness, batch process, release-date, breakdown	noOverlap, cumulative, endBeforeStart, Calendar constraint, circuit, Blocking constraint	Cplex, OPL	steel industry

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Relich2023 [989] Details Predictive and Prescriptive Analytics in Identifying Opportunities for Improving Sustainable Manufacturing	14	0.00 3.00 1.11	resource, machine, order, scheduling, task	CSP, constraint satisfaction, constraint programming, propagation, CP, constraint propagation	neural network, machine learning, genetic algorithm	business process, robot	benchmark, real-world, real-life		sustainability, inventory, BOM, transportation, distributed, bill of material	cycle	OPL	
Schweitzer2023 [1061] Details Choosing Solution Strategies for Scheduling Automated Guided Vehicles in Production Using Machine Learning	20	0.00 1.50 26.67	scheduling, job, machine, order, task, resource	CP, constraint programming, constraint satisfaction, constraint optimization	machine learning, neural network, meta heuristic, genetic algorithm, ant colony, particle swarm, simulated annealing, reinforcement learning, swarm intelligence, deep learning	robot, automotive, container terminal, pipeline	benchmark, real-world, github	JSSP, FJS, parallel machine	make-span, job-shop, transportation, completion-time, multi-objective, cmax, re-scheduling, multi-agent, explainable, breakdown, explanation, inventory, distributed		OR-Tools, MiniZinc, Cplex, CPO, OPL	automotive industry
ShaikhK23 [1065] Details Management of electronic ledger: a constraint programming approach for solving curricula scheduling problems	12	1.00 1.00 0.56	scheduling, resource, job, order, task, machine, activity	constraint programming, CLP, constraint satisfaction	time-tabling, genetic algorithm, machine learning, meta heuristic	medical, drone	benchmark, real-world		distributed, job-shop, open-shop, unavailability, re-scheduling			

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Tayyab2023 [1133] Details Modeling of Multi-Level Planning of Shifting Bottleneck Resources Integrated with Downstream Wards in a Hospital	26	0.00 0.00 0.54	resource, scheduling, machine, job	constraint program- ming	meta heuristic, quadratic program- ming, machine learning	patient, operating room, surgery, nurse, medical, aircraft	real-world	parallel machine	make-span, stochastic, due-date, flow-shop, completion- time, multi- objective, job-shop, setup-time, unavailabil- ity, distributed, Logic-Based Benders Decomposi- tion, Infeasible, re- scheduling, Benders De- composition		Cplex, OPL	
WessenCSFPM23 [1232] Details A constraint programming model for the scheduling and workspace layout design of a dual-arm multi-tool assembly robot	34	1.00 1.00 6.97	task, scheduling, order, resource, job, activity	CP, constraint program- ming, propaga- tion, constraint propagation		robot, hoist, satellite	real-world, github, benchmark		cyclic scheduling, make-span, precedence, Unsatisfi- able, blocking constraint, job-shop, completion- time, Infeasible, no-wait, multi-agent, periodic, flow-shop, distributed	cycle, cumulative, diffn, regular expression, circuit, Blocking constraint, alternative constraint, Regular constraint	MiniZinc, Gecode	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Xu2023 [1249] Details A reactive scheduling approach for the resource-constrained project scheduling problem with dynamic resource disruption	22	0.00 0.00 1.53	resource, scheduling, activity, order, machine, task	constraint programming, CP	genetic algorithm, meta heuristic, Lagrangian relaxation, large neighborhood search	COVID, airport	real-world, real-life, benchmark	RCPSP, Resource-constrained Project Scheduling Problem, psplib	make-span, preempt, reactive scheduling, precedence, stochastic, preemptive, Infeasible, unavailability, completion-time, transportation, multi-objective, breakdown, re-scheduling	Calendar constraint, span constraint, cumulative		
YuraszeckM-CCR23 [1271] Details A Constraint Programming Formulation of the Multi-Mode Resource-Constrained Project Scheduling Problem for the Flexible Job Shop Scheduling Problem	11	2.50 2.50 8.55	job, scheduling, machine, resource, task, order, activity	CP, constraint programming	meta heuristic, GRASP, mat heuristic	civil engineer	benchmark, real-world, github	JSSP, FJS, RCPSP, Resource-constrained Project Scheduling Problem, Open Shop Scheduling Problem, OSSP	job-shop, precedence, cmax, make-span, batch process, setup-time, open-shop, flow-shop, flow-time, multi-objective, preempt	cumulative, endBeforeStart	Cplex, OPL	pharmaceutical industry
ZhuSZW23 [1306] Details Constraint programming and logic-based Benders decomposition for the integrated process planning and scheduling problem	22	1.00 1.00 34.84	job, machine, scheduling, order, task, resource	CP, CSP, constraint programming, propagation, constraint propagation, constraint satisfaction	genetic algorithm, ant colony, particle swarm, column generation	robot	benchmark, real-world	cmax, make-span, job-shop, Benders Decomposition, precedence, completion-time, Logic-Based Benders Decomposition, open-shop, setup-time, transportation, multi-agent, preempt, distributed, inventory, re-scheduling	noOverlap, endBeforeStart, alternative constraint, disjunctive	Cplex		cable industry

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
abs-2305-19888 [542] Details Constraint Programming and Constructive Heuristics for Parallel Machine Scheduling with Sequence-Dependent Setups and Common Servers	42	1.50 1.50 41.88	task, machine, scheduling, resource, order, job, activity	CP, constraint program- ming	genetic algorithm, meta heuristic, Lagrangian relaxation	robot, high perform- ance computing	real-world, benchmark, gitlab, generated instance	parallel machine	cmax, setup-time, make-span, preempt, completion- time, Infeasible, preemptive, sequence dependent setup, distributed, flow-shop, re- scheduling, unavailabil- ity, bi- objective, explana- tion, precedence	noOverlap, alternative constraint, cumulative	Gurobi	
abs-2306-05747 [1131] Details An End-to-End Reinforcement Learning Approach for Job-Shop Scheduling Problems Based on Constraint Programming	9	2.00 2.00 12.09	job, scheduling, machine, order, resource, task	CP, constraint program- ming, propaga- tion, constraint optimiza- tion	neural network, re- inforcement learning, genetic algorithm, machine learning, meta heuristic, large neigh- borhood search, simulated annealing		benchmark, real-world, github, industrial instance, supplemen- tary material	JSSP	make-span, job-shop, re- scheduling, flow-time, completion- time, precedence, flow-shop, preempt, periodic, tardiness	noOverlap, disjunctive, cumulative	Choco Solver	
abs-2312-13682 [936] Details A Constraint Programming Model for Scheduling the Unloading of Trains in Ports: Extended	20	1.00 1.00 0.94	scheduling, order, machine, resource, activity, task	constraint program- ming, CP, propagation	large neigh- borhood search, mat heuristic, meta heuristic	container terminal, train schedule, nurse, steel mill, operating room	generated instance, real-world		make-span, transporta- tion, inventory, re- scheduling	cumulative, table constraint	OPL	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
AbreuN22 [314] Details A new hybridization of adaptive large neighborhood search with constraint programming for open shop scheduling with sequence-dependent setup times	20	1.00 1.00 57.71	job, machine, scheduling, resource, order, task	CP, constraint program- ming	meta heuristic, large neigh- borhood search, genetic algorithm, Lagrangian relaxation, mat heuristic, simulated annealing, ant colony, particle swarm	medical	benchmark, real-world	OSSP, Open Shop Scheduling Problem, single machine	setup-time, open-shop, make-span, completion- time, tardiness, cmax, flow-shop, distributed, multi- objective, job-shop, no-wait, transporta- tion, flow-time, bi- objective, batch process, preemptive, stochastic, no-buffer, preempt, inventory	noOverlap, cumulative, cycle	Cplex	chips industry
AwadMDMT22 [72] Details A constraint programming model for makespan minimisation in batch manufacturing pharmaceutical facilities	22	0.00 0.00 20.73	scheduling, task, resource, job, order, activity, machine	CP, constraint program- ming, propagation	meta heuristic, genetic algorithm, simulated annealing	crew- scheduling	benchmark, real-life	parallel machine	make-span, preempt, preemptive, due-date, setup-time, tardiness, batch process, job-shop, completion- time, lateness, no-wait, flow-shop, precedence, stochastic, cmax, earliness, inventory, breakdown, release-date	cycle, cumulative, noOverlap, alwaysIn, disjunctive, span constraint, endBefore- eStart, alternative constraint	Cplex, OPL	pharmaceu- tical industry
BourreauGGLT22 [209] Details A constraint-programming based decomposition method for the Generalised Workforce Scheduling and Routing Problem (GWSRP)	19	0.00 0.00 3.25	scheduling, order, resource, job	CP, constraint program- ming	column generation, genetic algorithm, large neigh- borhood search, meta heuristic	workforce scheduling, crew- scheduling, nurse, mainte- nance scheduling, airport	benchmark, real-world	transporta- tion, manpower, re- scheduling, no-wait, precedence	disjunctive, Disjunctive constraint, alldifferent, diffn, cycle		Cplex, Choco Solver, CHIP	printing industry

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Braune2022 [212] Details Packing-based branch-and-bound for discrete malleable task scheduling	30	0.00 3.00 17.66	scheduling, task, resource, job, order, machine, activity	CP, propagation, constraint propagation, constraint programming, constraint satisfaction	lazy clause generation, energetic reasoning, column generation		real-world, benchmark, generated instance	RCPSP, single machine	precedence, make-span, completion-time, preempt, flow-time, cmax, tardiness, preemptive, job-shop	bin-packing, cumulative, endBeforeStart	Cplex	
BulckG22 [1183] Details Optimizing rest times and differences in games played: an iterative two-phase approach	11	0.00 0.00 0.33	scheduling, order	CP, constraint programming	time-tabling, memetic algorithm, meta heuristic, large neighborhood search	round-robin, tournament, sports scheduling, travelling tournament problem	real-life, benchmark		Infeasible, Benders Decomposition, Logic-Based Benders Decomposition, distributed, unavailability		Cplex, Gurobi	
CampeauG22 [233] Details Short- and medium-term optimization of underground mine planning using constraint programming	18	0.00 0.00 4.09	scheduling, activity, task, resource, order, job	CP, constraint programming	column generation, edge-finding		real-life, real-world	RCPSP, Resource-constrained Project Scheduling Problem, RCPSPDC	precedence, net present value, stochastic, explanation, completion-time, make-span	cumulative, cycle, endBeforeStart, noOverlap, alwaysIn	Cplex	mining industry
CilKLO22 [277] Details Two-sided disassembly line balancing problem with sequence-dependent setup time: A constraint programming model and artificial bee colony algorithm	19	0.00 0.00 39.52	task, scheduling, job, resource, order, machine, activity	CP, constraint programming, propagation, constraint propagation, constraint satisfaction, CLP	meta heuristic, genetic algorithm, ant colony, simulated annealing, memetic algorithm, edge-finding, particle swarm	tournament, robot	benchmark, real-life, generated instance, real-world		setup-time, precedence, multi-objective, stochastic, explanation, sustainability, Infeasible, completion-time	cycle, noOverlap, table constraint, endBeforeStart	Cplex, Z3, OPL, Ilog Solver	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
ColT22 [300] Details Industrial-size job shop scheduling with constraint programming	19	2.00 2.00 33.77	job, scheduling, machine, order, resource, task	CP, constraint programming, CSP, propagation, constraint satisfaction, COP, constraint logic programming, CLP, constraint propagation	genetic algorithm, large neighborhood search, simulated annealing, machine learning, particle swarm, memetic algorithm	robot, semi-conductor, oven scheduling	benchmark, real-world, supplementary material, github, generated instance, real-life	JSSP, OSSP, parallel machine, FJS, PMSP, Open Shop Scheduling Problem, single machine	job-shop, make-span, setup-time, due-date, flow-shop, completion-time, precedence, tardiness, preempt, open-shop, lateness, batch process, breakdown, one-machine scheduling, no preempt, distributed, explanation, preemptive, multi-objective, transportation	noOverlap, cumulative, Arithmetic constraint, alldifferent, circuit, disjunctive	CPO, MiniZinc, OR-Tools, OPL, Cplex	
Doolaard2022 [343] Details Online learning of variable ordering heuristics for constraint optimisation problems	30	0.50 0.50 3.58	order, job, resource, machine, task, scheduling, activity	constraint programming, COP, constraint satisfaction, CSP, CP, constraint optimization	reinforcement learning, machine learning, support vector regression, neural network, meta heuristic, deep learning		benchmark, github	RCPSP, OSP, Resource-constrained Project Scheduling Problem	stochastic, precedence, job-shop		Gecode, MiniZinc	
El-Kholany2022 [363] Details Problem Decomposition and Multi-shot ASP Solving for Job-shop Scheduling	17	0.00 4.01 3.06	job, scheduling, machine, order, task, resource	CP, constraint programming, propagation, constraint propagation, constraint optimization	time- tabling, genetic algorithm, reinforcement learning	semiconductor, medical	benchmark, real-world, github		make-span, job-shop, precedence, tardiness, distributed, flow-shop, transportation, Infeasible, completion-time, re-scheduling, open-shop		OR-Tools	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
ElciOH22 [364] Details Stochastic Planning and Scheduling with Logic-Based Benders Decomposition	15	0.00 0.00 3.20	scheduling, task, job, resource, machine, order	CP, constraint programming, propagation, constraint logic programming, constraint propagation		operating room, patient, surgery, crew-scheduling, aircraft	benchmark, random instance, real-life	single machine	stochastic, Benders Decomposition, make-span, Logic-Based Benders Decomposition, tardiness, transportation, distributed, single-machine scheduling, due-date, Infeasible	cumulative, disjunctive	Cplex	
EmdeZD22 [373] Details Point-to-point and milk run delivery scheduling: models, complexity results, and algorithms based on Benders decomposition	30	0.00 0.00 3.40	scheduling, order, machine, job, resource, task	CP, constraint programming, constraint logic programming, constraint satisfaction		automotive, semiconductor, pipeline, drone, yard crane	github, random instance	single machine, parallel machine	flow-time, Benders Decomposition, release-date, Logic-Based Benders Decomposition, Infeasible, transportation, completion-time, tardiness, inventory, open-shop, job-shop, distributed, precedence, batch process, no-wait, stochastic, make-span, single-machine scheduling, bi-objective	bin-packing, noOverlap	Cplex	automotive industry

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
EtminaniesfahaniGNMS22 [382] Details A Forward-Backward Relax-and-Solve Algorithm for the Resource-Constrained Project Scheduling Problem	10	0.00 0.00 8.63	task, scheduling, resource, order, job, machine, activity	CP, constraint program- ming	genetic algorithm, meta heuristic, mat heuristic, particle swarm, lazy clause generation, memetic algorithm, ant colony, Lagrangian relaxation, large neigh- borhood search	aircraft, crew- scheduling	real-world	RCPSP, Resource- constrained Project Scheduling Problem, psplib, parallel machine	precedence, make-span, cmax, job-shop, net present value, earliness, open-shop, preemptive, preempt, tardiness, stochastic		Cplex, OR-Tools	
FarsiTM22 [396] Details Integrated surgery scheduling by constraint programming and meta-heuristics	14	1.00 1.00 4.92	scheduling, resource, task	CP, constraint program- ming	meta heuristic, ant colony, genetic algorithm, time-tabling	nurse, surgery, operating room, patient, robot, medical, physician	supplemen- tary material		multi- objective, make-span, Pareto, earliness, tardiness, stochastic, Benders Decomposi- tion, bi- objective, re- scheduling, completion- time, periodic, Logic-Based Benders Decomposi- tion, distributed, continuous- process, Infeasible, no-wait	alldifferent, circuit	Cplex	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Feng2022 [401] Details A Project Scheduling Game Equilibrium Problem Based on Dynamic Resource Supply	22	0.00 0.00 0.00	resource, activity, scheduling, order, task, job		genetic algorithm, particle swarm, neural network	construc- tion project, mainte- nance scheduling, COVID		RCPSP, Resource- constrained Project Scheduling Problem, PMSP	transporta- tion, multi- objective, completion- time, preempt, inventory, preemptive, Infeasible, stochastic, distributed, cmax, precedence, multi-agent, periodic, bi-objective	cycle		pharmaceu- tical industry, construc- tion industry
FetgoD22 [402] Details Horizontally Elastic Edge-Finder Algorithm for Cumulative Resource Constraint Revisited	32	0.00 0.00 12.41	task, resource, scheduling, order	CP, CSP, constraint program- ming, propaga- tion, COP, constraint optimiza- tion, constraint satisfaction	edge-finder, edge- finding, energetic reasoning, not-first, not-last, time- tabling, lazy clause generation, sweep		benchmark, real-world	CuSP, RCPSP, Resource- constrained Project Scheduling Problem	completion- time, precedence, cmax, preempt, make-span, explanation	cumulative	Choco Solver, CHIP	
Gao2022 [428] Details Optimization of parallel test task scheduling with constraint satisfaction	22	2.00 2.00 4.03	task, scheduling, order, resource, job, machine	constraint satisfaction, CSP	genetic algorithm, meta heuristic, particle swarm, swarm intelligence, ant colony	tournament	supplemen- tary material, benchmark	parallel machine	cmax, make-span, multi- objective, completion- time, no-wait, job-shop, Pareto, distributed, due-date, precedence, explana- tion, order scheduling	alternative constraint	Cplex	
Gembarski2022 [450] Details Joining Constraint Satisfaction Problems and Configurable CAD Product Models: A Step-by-Step Implementation Guide	28	0.00 2.00 1.24	order, task, activity, resource, scheduling	CSP, constraint satisfaction, propaga- tion, constraint propagation		automotive, aircraft			inventory, distributed			

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
GhandehariK22 [456] Details Mixed-integer linear programming, constraint programming and column generation approaches for operating room planning under block strategy	16	0.00 0.00 8.19	scheduling, resource, activity, order, task, machine, job	CP, constraint programming, constraint satisfaction	column generation, meta heuristic	patient, surgery, operating room, medical, COVID, crew-scheduling	real-world, generated instance		stochastic, precedence, re-scheduling, completion-time, cyclic scheduling, lateness, job-shop, setup-time, tardiness, earliness, multi-objective	noOverlap, disjunctive, bin-packing	Cplex, OPL	
Gokgur2022 [468] Details Minimization of Number of Tool Switching Instants in Automated Manufacturing Systems	18	0.00 1.50 9.22	job, machine, scheduling, order, resource	constraint programming, CP, propagation, constraint satisfaction	mat heuristic, genetic algorithm, simulated annealing, meta heuristic, ant colony	container terminal, robot		parallel machine, single machine	make-span		OZ, Cplex	
HeinzNVH22 [541] Details Constraint Programming and constructive heuristics for parallel machine scheduling with sequence-dependent setups and common servers	16	1.50 1.50 40.68	task, machine, scheduling, resource, job, order, activity	CP, constraint programming	genetic algorithm, meta heuristic, Lagrangian relaxation	high performance computing, robot, crew-scheduling	real-world, benchmark, gitlab, generated instance	parallel machine	setup-time, make-span, preempt, completion-time, flow-shop, Infeasible, preemptive, re-scheduling, bi-objective, sequence dependent setup, unavailability, distributed, explanation, precedence	noOverlap, cumulative, alternative constraint	Gurobi	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
JuvinHL22 [608] Details Logic-Based Benders Decomposition for the Preemptive Flexible Job-Shop Scheduling Problem	32	0.00 0.00 12.00	machine, job, scheduling, task, resource, order, activity	CP, constraint programming, constraint satisfaction	genetic algorithm, simulated annealing, meta heuristic		benchmark	JSSP, FJS, parallel machine, single machine	job-shop, make-span, preempt, completion-time, preemptive, cmax, Benders Decomposition, Logic-Based Benders Decomposition, release-date, flow-shop, precedence, setup-time, re-scheduling, distributed, Pareto	disjunctive, circuit, end-BeforeStart, Disjunctive constraint, noOverlap, cumulative	CPO, Cplex	
Kuramata2022 [669] Details Solving large break minimization problems in a mirrored double round-robin tournament using quantum annealing	18	0.00 0.00 0.02	scheduling, machine, task, order	constraint programming	simulated annealing, time-tabling, quadratic programming	break minimization problem, tournament, round-robin, sports scheduling			transportation, distributed, Infeasible		Gurobi, Cplex	
MengGRZSC22 [809] Details Novel MILP and CP models for distributed hybrid flowshop scheduling problem with sequence-dependent setup times	13	1.00 1.00 24.78	job, machine, scheduling, order, task	CP, constraint programming, propagation, constraint propagation	meta heuristic, genetic algorithm, memetic algorithm	semiconductor	benchmark	HFS, parallel machine, FJS, PMSP	distributed, setup-time, make-span, job-shop, precedence, multi-objective, no-wait, transportation, Benders Decomposition, flow-shop, Pareto, bi-objective, tardiness		Cplex, Gurobi, OPL	

Table 5: Extracted Features for ARTICLE (Total 578)

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
Michels2022 [823] Details Mixed-integer linear programming models for the type-II resource-constrained assembly line balancing problem	10	0.00 1.50 2.57	resource, task, machine, order, scheduling	CP, constraint program- ming	genetic algorithm	robot, automotive	benchmark, real-world, supplemen- tary material		precedence, setup-time, Benders Decomposi- tion, Infeasible, distributed	cycle, disjunctive	Gurobi	textile industry
Misra2022 [832] Details CProS: A web-based application for chemical production scheduling	6	0.00 0.00 0.14	task, scheduling, order, job	propaga- tion, constraint propagation		dairy	supplemen- tary material, real-life		inventory, make-span		Cplex	
MullerMKP22 [852] Details An algorithm selection approach for the flexible job shop scheduling problem: Choosing constraint programming solvers through machine learning	18	2.50 2.50 12.25	machine, job, scheduling, order, resource, task, activity	CP, constraint program- ming, constraint propaga- tion, propagation	neural network, machine learning, deep learning, meta heuristic, reinforce- ment learning, genetic algorithm	robot, semi- conductor	benchmark, real-world, random instance, github	FJS, Resource- constrained Project Scheduling Problem	job-shop, make-span, completion- time, cmax, preempt, bi- objective, precedence, batch process, multi- objective, breakdown, sustainabil- ity, due-date, no-wait, preemptive, setup-time, online scheduling, stochastic	circuit, disjunctive	Cplex, OR-Tools, MiniZinc, Chuffed, OPL, Choco Solver, Gecode

10 Acronyms

Table 14: Acronym Concepts

Acronym	Type	Description
2BPHFSP	Classification	Two-Stage Bin Packing and Hybrid Flow Shop Scheduling Problem
BOM	Concepts	Bill of Material
BPCTOP	Classification	Bulk Port Cargo Throughput Optimisation Problem
CECSP	Classification	Continuous Energy-Constrained Scheduling Problem
CHSP	Classification	Cyclic Hoist Scheduling Problem
CLP	CP	Constraint Logic Programming
COP	CP	Constraint Optimization Problem
COVID	ApplicationAreas	Coronavirus disease
CP	CP	Constraint Programming
CSP	CP	Constraint Satisfaction Problem
CTW	Classification	Cable Tree Wiring Problem
CuSP	Classification	Cumulative Scheduling Problem
EOSP	Classification	Earth Observation Scheduling Problem
FJS	Classification	Fixed Job Scheduling
GCC constraint	Constraints	global cardinality constraint
GCSP	Classification	Group Cumulative Scheduling Problem
GRASP	Algorithms	Greedy Randomized Adaptive Search Procedure
HFF	Classification	Hybrid Flexible Flow-shop
HFFTT	Classification	Hybrid Flexible Flowshop with Transportation Times
HFS	Classification	Hybrid Flow-shop Problem
HVAC	ApplicationAreas	Heating Ventilation Air-Conditioning
IGT	Algorithms	Improved Guo Tao algorithm
JSPT	Classification	Job-Shop Scheduling Problem with Transportation
JSSP	Classification	Job-Shop Scheduling Problem
KRFP	Classification	kernel resource feasibility problem
LSFRP	Classification	Liner Shipping Fleet Repositioning Problem
MGAP	Classification	Modified Generalized Assignment Problem
MINLP	Algorithms	Mixed-Integer Non-linear Programming
MIQP	Algorithms	Mixed-Integer Quadratic Programming
NEH	Algorithms	Scheduling Algorithm developed by Nawaz, Enscore, Ham
OSP	Classification	Oven Scheduling Problem
OSSP	Classification	Open Shop Scheduling Problem
PCB industry	Industries	printed circuit board industry
PJSSP	Classification	Pre-emptive Job-Shop scheduling Problem
PMSP	Classification	Parallel Machine Scheduling Problem
PP-MS-MMRCPS	Classification	partially preemptive- multi-skill/mode resource-constrained project scheduling problem with generalized precedence relations and resource calendars
PTC	Classification	Scheduling Problem with Time Constraints
RCMPSP	Classification	Resource-Constrained Multi-Project Scheduling Problem
RCPSP	Classification	Resource-constrained Project Scheduling Problem
RCPSPDC	Classification	Resource-constrained Project Scheduling Problem with Discounted Cashflow
RTMP	Classification	Railway Traffic Management Problem
SBSFMMAL	Classification	Simultaneous Balancing and Scheduling of Flexible Mixed Model Assembly Lines
SCC	Classification	Steel-making and continuous casting
SMSDP	Classification	steel mill slab design problem
TCSP	Classification	Temporal Constraint Satisfaction Problem
TMS	Classification	Transmission Network Maintenance Planning
UTVPI constraint	Constraints	unit two variable per inequality constraint
psplib	Classification	Project Scheduling Problem Library
rtRTMP	Classification	real-time Railway Traffic Management Problem

11 Concept Matching

In order to automatically find out properties of the articles, we try to find certain concepts in the pdf versions of the articles. We manually defined an ontology of important concepts to look for, and defined regular expressions that would recognize these concepts in the text. We use the *pdgrep* command to search for the number of occurrences of certain regular expressions in the files. This often clearly identifies the constraints used in the model. We group the results by number of occurrences of the concept in the text of the work. Note that this is only approximate, as we do include the full pdf file in the search. A concept might only be mentioned in some of the title of citations used in the paper, we do count them in our results, as we were not able to remove the bibliography from the main body of the work.

Overall, if a work is not mentioned as using the concept, the the text does not contain a match to the corresponding regular expression. A fundamental limitation of this approach is that it only really works for text written in the language the regular expressions are designed for (in our case English), and not those written in another language. We could overcome this limitation by defining all concepts in other languages as well, and then using a language flag to identify the language the text is written in.

Note that we only show the first 30 matching entries in each concept category, and list the total number of matches if there are more than 30 matches.

11.1 Concept Type Scheduling

A Papers and Articles Missing a Local Copy

This section lists all papers and articles for which we were not able to locate an electronic copy that we could download to our system. This might be because the work is behind a paywall for which we do not have access, or since the paper only exists in hardcopy, for works from the start of the period covered. As in either case we are not able to extract useful information from the work, either automatically, or manually, without the actual text itself, these gaps should be closed where possible.

Some journals are highlighted in red, indicating that I cannot read these through our library. This helps to avoid repeatedly checking whether I can access the papers via the publication URL. The highlighting is controlled by the blocked.json file in the imports/ directory.

Table 25: PAPER without Local Copy (Total 11)

Key/URL	Authors	Title	Relevance	Year	Conference /Journal	Cite
Goponenko2024 Goponenko2024	A. V. Goponenko, K. Lamar, B. A. Allan, J. M. Brandt, D. Dechev	Job Scheduling for HPC Clusters: Constraint Programming vs. Backfilling Approaches	2.00 2.00 n/a	2024	unknown 2024	[476]

B Papers and Articles Without Recognized Concepts

This section lists papers and articles for which we have a pdf local copy, but where we were not able to extract any of the defined concepts. This can basically have two reasons. We either have included a paper which is not at all related to scheduling, so that none of the defined concepts occur in the paper. A more likely cause is that the pdf file is a scanned document for which optical character recognition was not run or not successful, so that the pdf consists of a series of bitmap images. In that case, pdfgrep is unable to find any text in the document, and no matches for concepts are found. It may be useful to check the pdf files to see if that is the case.

B.1 Irrelevant Work Suspects

The works in the following table might be irrelevant, as their computed relevance for the body text is very low. Works that do not have a local copy or that only are one or two pages long are excluded from this analysis.

ArtiguesR00 [63] Details A polynomial activity insertion algorithm in a multi-resource schedule with cumulative constraints and multiple modes	20	0.00 0.00 0.00	resource, activity, scheduling, job, order, machine		simulated annealing			RCPSP, RCMPSP	lateness, completion-time, precedence, make-span, job-shop, re-scheduling, cmax, due-date, transportation, release-date, no preempt, preempt, setup-time, earliness	cumulative, cycle, disjunctive		
HebrardALL-CMR22 [530] Details An Efficient Approach to Data Transfer Scheduling for Long Range Space Exploration	7	0.00 0.00 0.00	order, scheduling, activity		sweep	round-robin, deep space			no-buffer, Unsatisfiable	cumulative	Claire	
ArtiguesHQT21 [59] Details Multi-Mode RCPSP with Safety Margin Maximization: Models and Algorithms	8	0.00 0.00 0.00	job, resource, scheduling, order, machine			evacuation, wildfire		RCPSP, Resource-constrained Project Scheduling Problem	preempt, preemptive, release-date	cumulative	Cplex	
HebrardHJMPV16 [531] Details Approximation of the parallel machine scheduling problem with additional unit resources	10	0.00 0.00 0.00	job, machine, resource, scheduling, order, task			satellite, earth observation	industrial partner	parallel machine	make-span, cmax, completion-time, online scheduling, distributed	cumulative		
BlomPS16 [177] Details A Decomposition-Based Algorithm for the Scheduling of Open-Pit Networks Over Multiple Time Periods	26	0.00 0.00 0.00	scheduling, resource, task, order, machine, activity		MINLP, Lagrangian relaxation, genetic algorithm	pipeline, offshore	benchmark, industry partner		distributed, precedence, producer/consumer, batch process, re-scheduling, Infeasible, transportation	disjunctive	Cplex	process industry

Table 34: Features of Works that might be Irrelevant

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
BlomBPS14 [176] Details A Decomposition-Based Heuristic for Collaborative Scheduling in a Network of Open-Pit Mines	19	0.00 0.00 0.00	scheduling, resource, order, task		MINLP	offshore	industry partner, benchmark		precedence, transportation, distributed, net present value, stochastic, Benders Decomposition	disjunctive	Cplex	mineral industry
TranPZLDB18 [1161] Details Multi-stage resource-aware scheduling for data centers with heterogeneous servers	17	0.00 0.00 0.00	job, machine, resource, scheduling, order, task		machine learning	high performance computing	benchmark, generated instance	single machine	distributed, stochastic, re-scheduling, preempt, energy efficiency, completion-time, periodic, online scheduling, make-span, preemptive	bin-packing	Cplex	
LuoVLBM16 [773] Details Using Metric Temporal Logic to Specify Scheduling Problems	4	0.00 0.00 0.00	scheduling, activity, job, machine, resource, order, task		time-tabling	nurse			job-shop, explanation, precedence			
LouieVNB14 [761] Details An autonomous assistive robot for planning, scheduling and facilitating multi-user activities	7	0.00 0.00 0.00	activity, scheduling, order, machine, task, resource, job			robot, patient			periodic	cycle	OPL	
TranTDB13 [1162] Details Hybrid Queueing Theory and Scheduling Models for Dynamic Environments with Sequence-Dependent Setup Times	9	0.00 0.00 0.00	job, scheduling, resource, order, machine, task		ant colony	round-robin	real-world	parallel machine	setup-time, make-span, flow-time, cmax, periodic, re-scheduling, stochastic, distributed, Infeasible, flow-shop	cycle	Cplex	
Jans09 [598] Details Solving Lot-Sizing Problems on Parallel Identical Machines Using Symmetry-Breaking Constraints	14	0.00 0.00 0.00	machine, order, scheduling, resource, job		meta heuristic, column generation	business process, offshore	benchmark	parallel machine, single machine	inventory, setup-time, distributed, Infeasible, sequence dependent setup, multi-agent		Cplex	fashion industry, foundry industry, tire industry, process industry

Table 34: Features of Works that might be Irrelevant

Work/Title	Pages	Relevance	Scheduling	CP	Algorithms	ApplicationAreas	Benchmarks	Classification	Concepts	Constraints	CPSystems	Industries
PenzDN23 [934] Details Minimizing the sum of completion times on a single machine with health index and flexible maintenance operations	13	0.00 0.00 0.00	job, machine, scheduling, order, activity, resource		meta heuristic, memetic algorithm, ant colony, simulated annealing	maintenance scheduling, semiconductor		single machine, parallel machine	completion-time, single-machine scheduling, flow-time, stochastic, job-shop, make-span, setup-time, unavailability, tardiness, periodic, breakdown, earliness, preempt, sustainability, one-machine scheduling, release-date, preemptive		Cplex	semiconductor industry
FoxAS82 [411] Details Job-Shop Scheduling: An Investigation in Constraint-Directed Reasoning	4	0.00 0.00 0.00	order, scheduling, machine, job, resource, task			robot			due-date, job-shop, distributed, precedence, re-scheduling, tardiness			

B.2 Works with Few Extracted Concepts

These works do match only few concepts, they might be discussing other topics that should be included in the list of concepts, or they might be irrelevant, and included in the survey by mistake.

C Unmatched Concepts

This section lists those concepts for which no matches were found. The most likely cause is a mistake in the regular expression used to find the concept, but it is also possible that some concept simply is not mentioned in any of the documents.

Table 37: Unmatched Concepts

Type	Name	CaseSensitive	Revision
Industries	PCB industry		0
Industries	leisure industry		0
Industries	metalworking industry		0
Industries	nuclear industry		0
Industries	steel making industry		0
Classification	Modified Generalized Assignment Problem		0
Classification	PP-MS-MMRCPPSP	Y	1
Classification	Pre-emptive Job-Shop scheduling Problem		0
Classification	SMSP	Y	1
Classification	Steel-making and continuous casting		0
ApplicationAreas	ship building		0
Algorithms	large language model		0
