

Constraint Programming and rostering

Helmut Simonis

2025-10-15

1 Introduction

This document shows the result of a survey on "Constraint Programming and Rostering", which tries to find and classify all publications on the combination of these two concepts. It is based on a manually collected bibfile containing reference to relevant papers and articles, and on an automatic and manual analysis of local copies of the cited papers. For copyright reasons, we are obviously not able to distribute the collected copies, but we provide links to the original sources of the files.

We identify the papers by a key which is the last name of the first author, the first character of the last names of all other authors, and a two digit year code for the date of publication. If multiple works would define the same key, we differentiate by adding a suffix "a", "b", etc, to the second and subsequent works found.

Most of the content of this document is generated by a Java program that parses the bib files, adds any manually extracted information, and which then extracts concept occurrences from the local copies of the works. It then produces tables and other LaTeX artifacts that are included in a manually defined top-level document.

To add new works, first add bibtex entries for each work in the main `./imports/rostering.bib` file, then add local copies of the pdf of the work to the `./works/` directory, using the key of the bibtex entry as the file name (plus extension `.pdf`), and then run the main Java program `org.insightcentre.pthg24.JfxApp` to consolidate the information and extract the relevant concepts. Finally, run `lualatex` on the `./rostering.tex` file to produce this pdf document. Manually extracted information for the files can be added in the `./imports/manual.csv` file. New concepts can be added in the file `./imports/concepts.json`, new concept types need to be directly defined in the Java code.

We start the document by providing a table of all defined keys in the bib file in alphabetical order. This table can be helpful to see if a candidate paper is already in the survey, it suffices to see if the key is already present, and matches the authors, title and origin of the candidate paper. In the table the hyper-link given by the key points to the local copy of the file, while the citation number links to the bibliography entry. That entry typically also contains a link to the original source of the paper.

This document heavily depends on the use of hyper links in the document, it has been tested with Acrobat Reader, other pdf reader may not use links in the same way. If you read the on-line version of the document, the links to the local files will not be active.

Table 1: Key Overview (Total: 2606 Not Including Background Works)

2 Conference Paper List

This section presents the information for all conference papers included in the survey. For space reasons, not all information about the papers can be presented in a single table, we therefore split the data into three parts. The first part contains the main bibliographical information for the paper. The papers are sorted by year of publication (newest first), and then alphabetically by key.

The key field of the table contains a hyperlink to the original source URL of the paper. You may have to navigate manually to see or download the actual paper content, and you may be unable to access the paper at all if it is behind a paywall for which you (or your organization) do not have access.

We then list the authors of the paper, in the order given in the bibtex file, abbreviating first names for space where we can identify them. Note that names with non-latin characters are not handled by latex. We use the form that is given in the bibtex file, but have excluded entries that cause latex to fail.

We then give the title of the publication, using the original capitalization of the title entry in the bibtex entry, which may differ from the format shown in the bibliography. We then (column LC) provide a link to a local copy, if it is present, and a link to the bibliography entry of the paper. We also show the year of publication, and the conference where the paper was published, using a short form abbreviation of the conference. This relies on a matching routine in the Java code to find the short title, new conference series may require an additional entry in `ImportBibtex.java` to work properly. Finally we list the number of pages of the paper, this information is using the bibtex entry where possible, otherwise uses `pdfinfo` to extract the actual number of pages from the local copy.

2.1 Conference Papers from bibtex

Bleukx2025 [303] Details Modeling and Explaining an Industrial Workforce Allocation and Scheduling Problem	24	1.00 1.00 4.19	workforce allocation, workforce scheduling	model, CP, optimization, CSP, constraint programming, system, COP, constraint satisfaction, constraint optimization, survey, propagation, state of the art, introduction, review, constraint propagation
Castineiras2025 [445] Details Developing a University Timetabling Assistant Tool to Address the Voice of Students	9	0.00 0.00 3.05	timetable, time-tabling, university timetabling	survey, model, review, system, developments, optimization, research directions, introduction
CheukamN-gouonou2025 [519] Details Acquiring and Selecting Implied Constraints with an Application to the BinSeq and Partition Global Constraints	18	0.00 0.00 0.17	Nurse Scheduling, rostering	model, CP, system, constraint satisfaction, constraint programming, propagation, CSP, constraint propagation, optimization, survey, integer programming, introduction
Lagerkvist2025 [1195] Details The Work Task Variation Problem	23	0.00 0.00 1.57	workforce scheduling, personnel, rostering, workforce allocation, Nurse Rostering	CP, model, local search, system, benchmark, constraint programming, optimization, tabu search, metaheuristics, simulated annealing, review, LNS, package, survey, state of the art, propagation, introduction
Le2025 [1215] Details Aircraft Resource-Constrained Assembly Line Balancing with Learning Effect: A Constraint Programming Approach	24	0.00 0.00 0.00		CP, model, constraint programming, system, review, optimization, benchmark, MILP, genetic algorithm, survey, simulated annealing, introduction, tabu search
Weidmann2025 [2263] Details Multi-League Sports Scheduling with Team Interdependencies: An Optimization Model	19	0.00 0.00 0.28	time-tabling, automated timetabling	optimization, CP, model, system, integer programming, constraint programming, MIP, tabu search, competition, constraint satisfaction, simulated annealing, metaheuristics, introduction

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Abdelaidoum2024 [17] Details An Efficient Modeling Approach for Nurse Rostering Problem: Use Case	6	2.00 2.00 3.36	rostering, Nurse Rostering, Nurse Scheduling, workforce scheduling	model, optimization, metaheuristics, genetic algorithm, system, MILP, constraint programming, benchmark, state of the art, local search, tabu search, review, survey
Atoyebi2024 [192] Details Enhancing Nurse Scheduling with User Preferences: Hybrid Genetic Algorithm and Variable Neighbourhood Search Approach	5	1.00 1.00 1.96	Nurse Scheduling, rostering, Nurse Rostering, staff scheduling, examination timetabling, time-tabling	system, model, genetic algorithm, optimization, tabu search, simulated annealing, review, local search, column generation, integer programming, MIP, benchmark, metaheuristics, introduction
Barra2024 [243] Details Acquiring Constraints for a Non-linear Transmission Maintenance Scheduling Problem	17	0.00 0.00 0.68	Maintenance Scheduling	model, CP, system, constraint programming, MILP, optimization, review, survey, introduction
Cherif2024 [518] Details Minimizing Working-Group Conflicts in Conference Session Scheduling Through Maximum Satisfiability (Short Paper)	11	0.00 0.00 0.36	time-tabling, staff scheduling	model, CP, optimization, constraint programming, system, benchmark, introduction, integer programming, propagation, developments, survey
Eldharif2024 [704] Details An Improved Genetic Algorithm Tool for Exam Timetabling Solutions	6	1.00 1.00 2.62	timetable, time-tabling, exam scheduling, examination timetabling	genetic algorithm, system, introduction, model, review, optimization, simulated annealing, metaheuristics
Galadkov2024 [790] Details Using simulated annealing for personnel assignment in railway nodes	6	1.00 1.00 1.44	personnel, time-tabling, timetable	simulated annealing, model, optimization, MILP, genetic algorithm, metaheuristics, system, hybrid algorithm, introduction
Huang2024 [994] Details Optimization of Multi-Level Nurse Scheduling: A Biorhythm-Based Fatigue Model Integrated with PFMEA for Enhancing Service Reliability	8	2.00 2.00 1.42	Nurse Scheduling, Nurse Rostering, personnel, rostering	model, optimization, system, genetic algorithm, hybrid algorithm, review, introduction, benchmark, local search, simulated annealing

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Huang2024a [995] Details Research on Nurse Scheduling Considering Fairness Preference and Fatigue Risk under Hierarchical Management System	5	1.00 1.00 0.88	Nurse Scheduling, rostering, Nurse Rostering, personnel, Scheduling for nurses	system, model, optimization, genetic algorithm, review, hybrid algorithm, introduction
Mixer2024 [1516] Details Two genetic algorithms for final exam scheduling	5	1.00 1.00 2.42	exam scheduling, time-tabling, timetable, examination timetabling, school timetabling	genetic algorithm, optimization, model, simulated annealing, constraint programming, tabu search, introduction, algorithmic strategies, local search, CP, system
Moreira2024 [2575] Details A CP-SAT Approach for Academic Resource Timetabling in Higher Education Institutions: A Case Study at a Major Public University	8	1.00 1.00 7.67	time-tabling, timetable, university timetabling, school timetabling, automated timetabling, personnel, school timetable	model, system, CP, optimization, review, constraint programming, integer programming, genetic algorithm, tabu search, survey, local search, simulated annealing, competition, state of the art, constraint satisfaction, hyper heuristics, hybrid algorithm, heuristic selection
Prakasa2024 [1741] Details Automating School Timetabling: An Intelligent System Application Using Simulated Annealing	6	4.00 4.00 7.48	time-tabling, school timetabling, timetable, examination timetabling, university timetabling, school timetable, automated timetabling	simulated annealing, optimization, system, survey, model, benchmark, constraint programming, genetic algorithm, review, metaheuristics, local search, hybrid algorithm, tabu search, introduction
Pratama2024 [1742] Details Optimizing Practical Room Scheduling Using Genetic Algorithms: A Timetabling Case Study at Telkom University	6	1.00 1.00 2.69	timetable, time-tabling, university timetabling	genetic algorithm, system, optimization, review, hyper heuristics, introduction, model, simulated annealing, tabu search
Yang2024b [2359] Details Integrated Train Timetable Rescheduling After Large-Scale Events for Minimizing Passenger Waiting Time in Metro System	6	1.00 1.00 2.77	timetable, time-tabling	model, system, optimization, MILP, integer programming, review, introduction, simulated annealing
Yao2024a [2381] Details An Integrated Timetable Optimization and Automatic Guided Vehicle Dispatching Method in Smart Manufacturing	6	1.00 1.00 2.72	timetable	model, optimization, system, review, genetic algorithm, integer programming, MIP, survey, benchmark, hybrid algorithm, introduction

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Zhang2024c [2491] Details Towards Greener Rail Transit: Multi-Train Timetable and Speed Profile Optimization for Energy Conservation*	6	1.00 1.00 1.49	timetable, time-tabling	optimization, model, system, MILP, constraint optimization, introduction
Abdipoor2023 [20] Details International Timetabling Competition 2019: A Systematic Literature Review	6	3.00 3.00 6.67	time-tabling, automated timetabling, university timetabling, Nurse Rostering, rostering, timetable	benchmark, competition, system, MIP, optimization, review, local search, simulated annealing, metaheuristics, integer programming, model, survey, genetic algorithm, hyper heuristics, COP, tabu search
Adesola2023 [49] Details Implementation of University Course Time-tabling system using Iterative Forward Search Algorithm	4	1.00 1.00 3.39	time-tabling, timetable, examination timetabling, university timetabling, automated timetabling, rostering, school timetabling	system, local search, metaheuristics, constraint satisfaction, review, model, CSP, introduction, optimization, survey
Cai2023 [405] Details Maintenance Scheduling Optimization for AC-DC Grid Based on Component Status under N-1 Contingencies	7	1.00 1.00 3.91	Maintenance Scheduling	system, model, optimization, introduction, review
Coviello2023 [563] Details Integrated Ant Colony Optimization and Mixed Integer Linear Programming for Multi-objective Railway Timetabling	7	1.00 1.00 7.15	timetable, time-tabling, rostering	MILP, model, optimization, system, local search, MIP, developments, package, introduction, survey, state of the art, benchmark
Ding2023 [648] Details Collaborative Optimization of Train Timetable and Train Formation Plan Combined with Passenger Flow Control Strategy	6	1.00 1.00 1.53	time-tabling, timetable	model, optimization, system, MILP, column generation, introduction, review
Fyvie2023 [784] Details Explaining a Staff Rostering Genetic Algorithm using Sensitivity Analysis and Trajectory Analysis.	9	1.00 1.00 0.74	rostering	optimization, model, genetic algorithm, evolutionary algorithm, metaheuristics, system, introduction, propagation, review, survey

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Haleel2023 [902] Details Maintenance Scheduling Optimization using Artificial Intelligence Techniques: A Review	6	2.00 2.00 9.30	Maintenance Scheduling , Technician routing	optimization , system , genetic algorithm , review , metaheuristics , model , simulated annealing , evolutionary algorithm , introduction, MILP, constraint programming, mathematical programming, tabu search
Heiniger2023 [943] Details Solving the Nurse Scheduling Problem in Crisis Situations Applying a Genetic Algorithm	7	1.00 1.00 0.48	Nurse Scheduling , personnel, rostering	genetic algorithm , optimization , system , model , review, goal programming, metaheuristics, package, survey
Huang2023 [1000] Details Optimizing Nurse Scheduling in Organizations a Heuristic Algorithm Assisted by Adaptive Integer Programming Reconstruction	5	1.00 1.00 2.54	rostering , Nurse Rostering , Nurse Scheduling, staff scheduling, personnel	optimization , benchmark , model , local search, system, integer programming, competition, hyper heuristics, metaheuristics, CP, MIP, heuristic ordering, constraint programming, survey
Huang2023a [999] Details Analyzing Hierarchical Organizational Structure Change: Strategic Planning Model from Personnel Perspective	6	1.00 1.00 3.17	personnel	model , system , optimization , integer programming, introduction, survey, genetic algorithm, research directions, review
Hurmuzi2023 [1010] Details Course Timetabling for Distance Learning Program at SKU Using Genetic Algorithm	7	1.00 1.00 2.20	timetable , time-tabling , Course schedule , university timetabling	genetic algorithm , system , optimization , evolutionary algorithm, model , review, introduction, local search, package, simulated annealing, tabu search
Liu2023a [1369] Details Accelerating Model Solving for Integrated Optimization of Timetabling and Vehicle Scheduling based on Graph Convolutional Network	7	2.00 2.00 3.55	timetable , time-tabling	model , MILP, optimization , system , introduction, genetic algorithm, integer programming, survey
Liu2023b [1345] Details A Mixed Integer Linear Programming Formulation for Subway Timetable Optimization Problems with Passenger Waiting and Energy Saving Objectives	8	1.00 1.00 4.16	timetable , time-tabling	optimization , MILP, system , review , model , metaheuristics, integer programming, introduction, local search, MIP, genetic algorithm, survey

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Muriyatmoko2023 [1554] Details A Proposed Model for Integration of University Course Timetabling and Vehicle Routing Problems: An Initial Investigation	6	1.00 1.00 11.44	time-tabling , timetable , Maintenance Scheduling, university timetabling, examination timetabling, school timetabling	model , optimization , COP , system , MIP , metaheuristics , hyper heuristics , competition , integer programming , simulated annealing , survey , CP , MILP , state of the art , benchmark , introduction , tabu search
Rashidova2023 [1804] Details A mathematical model for compiling an optimal examination timetabling in a higher education institution	6	2.00 2.00 1.84	time-tabling , timetable , examination timetabling , examination scheduling , Nurse Scheduling	model , system , genetic algorithm , mathematical programming , competition , optimization , introduction
V.2023 [2176] Details Automating Timetable Generation with Conflict Resolution Algorithms in Web-Based Systems for Educational Institutions	4	1.00 1.00 2.40	timetable , time-tabling	system , optimization , review , introduction , model , genetic algorithm , tabu search
Wang2023 [2232] Details Hybrid Optimization for Nurse Rostering Problem : Integrating Greedy Solution and Local Genetic Algorithm with Dynamic Encoding	6	4.00 4.00 9.71	rostering , Nurse Rostering , Nurse Scheduling , personnel	optimization , integer programming , genetic algorithm , system , model , benchmark , CP , MIP , hybrid algorithm , local search , hybrid heuristics , survey , constraint programming , introduction
Wang2023b [2255] Details Co-optimization of Midterm and Short-Term Maintenance Scheduling with Large-Scale Wind Energy Integration	7	1.00 1.00 3.92	Maintenance Scheduling	system , model , optimization , package , introduction
Austero2022 [193] Details Solving course timetabling problem using Whale Optimization Algorithm	7	1.00 1.00 3.52	timetable , time-tabling , Course schedule , personnel , school timetabling	optimization , system , model , survey , review , metaheuristics , local search , genetic algorithm , tabu search , evolutionary algorithm , propagation , introduction , developments
Chen2022c [487] Details Investigation of Heuristic Orderings with a Perturbation for Finding Feasibility in Solving Real- World University Course Timetabling Problem	6	1.00 1.00 3.32	time-tabling , timetable , Nurse Rostering , examination timetabling , rostering , automated timetabling	heuristic ordering , optimization , benchmark , survey , hyper heuristics , local search , competition , metaheuristics , system , tabu search , introduction , research directions , model , hybrid heuristics , genetic algorithm , review , simulated annealing

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Fong2022 [762] Details Zombie Survival Optimization in Solving University Examination Timetabling Problem	5	2.00 2.00 4.75	time-tabling , examination timetabling , university timetabling , timetable , automated timetabling	optimization , system , benchmark , genetic algorithm, simulated annealing, memetic algorithm, metaheuristics, model, introduction, survey, state of the art, heuristic ordering, hybrid algorithm, local search, algorithmic strategies, hyper heuristics
Gogos2022 [835] Details Modeling a balanced commute educational timetabling problem in the context of teaching Integer Programming	5	2.00 2.00 1.59	time-tabling , examination timetabling, school timetabling, timetable, automated timetabling	model , optimization , integer programming , mathematical programming , survey, system, CP, benchmark, constraint programming, developments, metaheuristics, review, state of the art
Hasani2022 [925] Details A Linear Model for Wind Farms Preventive Maintenance Scheduling Considering the Wind Speed Uncertainty and Electricity Market Conditions	7	1.00 1.00 1.18	Maintenance Scheduling	system , model , optimization , review , introduction, survey
Mohammed2022 [1522] Details Examinations Timetabling System Based on A Genetic Algorithm	6	2.00 2.00 6.73	time-tabling , timetable , examination timetabling , exam scheduling, examination scheduling, automated timetabling, rostering	genetic algorithm , system , model , review , optimization , evolutionary algorithm, survey, metaheuristics, introduction, tabu search, hybrid heuristics, constraint satisfaction, state of the art
Oberweger2022 [1626] Details A Learning Large Neighborhood Search for the Staff Rerostering Problem	18	0.00 0.00 2.97	rostering , personnel, Nurse Rostering	LNS , model , MIP , system , optimization , review , COP, integer programming, metaheuristics, local search, introduction, constraint programming, genetic algorithm, benchmark, CP
Popovic2022 [1730] Details Scheduling the Equipment Maintenance of an Electric Power Transmission Network Using Constraint Programming	15	0.00 0.00 1.56	Maintenance Scheduling , timetable	model , CP , system , constraint programming , optimization , review , introduction, survey
Premananda2022 [1745] Details Hybrid Whale Optimization Algorithm for Solving Timetabling Problems of ITC 2019	6	1.00 1.00 2.76	time-tabling , examination timetabling, timetable, school timetabling, automated timetabling	optimization , competition , local search , system , simulated annealing, genetic algorithm, benchmark, memetic algorithm, survey, introduction, hybrid algorithm
Rahman2022 [1791] Details Systematic Literature Review of Metaheuristic Methodologies for High School Timetabling Problem	6	4.00 4.00 11.89	time-tabling , school timetabling , examination timetabling, timetable, school timetable	optimization , local search , review , survey , metaheuristics , hyper heuristics , genetic algorithm , simulated annealing , model , system , state of the art, introduction, LNS, benchmark, integer programming

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Said2022 [1885] Details A Constraint Satisfaction Problem (CSP) Approach for the Nurse Scheduling Problem	6	2.00 2.00 1.74	Nurse Scheduling , rostering, Nurse Rostering, time-tabling, personnel	propagation , optimization , model , constraint satisfaction , constraint propagation , CSP , system , MILP , mathematical programming , metaheuristics , tabu search , introduction , review , competition , genetic algorithm
Siew2022 [2001] Details Grouping and Heuristics for A Multi-stage Class Timetabling System	6	1.00 1.00 5.21	time-tabling , timetable , university timetabling, school timetabling, automated timetabling , Timetable construction, examination timetabling, school timetable	system , survey , optimization , local search , review , hybrid algorithm , genetic algorithm , tabu search , integer programming , introduction , competition , benchmark , metaheuristics , model
Wong2022 [2276] Details A Genetic Algorithm for the Real-world University Course Timetabling Problem	5	1.00 1.00 3.13	time-tabling , timetable , examination timetabling, university timetabling, automated timetabling , school timetabling, school timetable, Timetable construction	genetic algorithm , optimization , system , local search , metaheuristics , tabu search , evolutionary algorithm , benchmark , model , simulated annealing , survey , mathematical programming , introduction , bibliography , heuristic ordering , state of the art
Alexa2021 [107] Details Modeling and Solving the University Timetabling Problem using the Constraints Satisfaction Model: A Case Study	6	2.00 2.00 1.52	time-tabling , timetable , university timetabling, examination timetabling, Timetable construction, automated timetabling	model , constraint satisfaction , genetic algorithm , system , tabu search , CP , goal programming , hyper heuristics , introduction , local search , optimization , review , simulated annealing
Geibinger2021 [816] Details Physician Scheduling During a Pandemic	10	0.00 0.00 0.62	personnel , rostering, Nurse Rostering	model , CP , optimization , constraint programming , MIP , integer programming , state of the art , introduction
Guo2021 [875] Details Generation maintenance scheduling based on multi-objective particle swarm optimization considering carbon emissions	7	1.00 1.00 1.36	Maintenance Scheduling	system , model , optimization , introduction , genetic algorithm
Khan2021 [1130] Details An Experimental Application of Multi-Objective Evolutionary Algorithm to Many-Objective Nurse Scheduling for Real General Hospitals	4	1.00 1.00 0.35	Nurse Scheduling , rostering, Nurse Rostering	system , optimization , evolutionary algorithm , introduction , state of the art , benchmark , local search , metaheuristics , model
Moi2021 [1525] Details Genetic Algorithm Based Heuristic for Constrained Industry Factory Workforce Scheduling	4	1.00 1.00 1.28	workforce scheduling , staff scheduling , rostering, time-tabling, Scheduling staff , Nurse Scheduling	genetic algorithm , tabu search , benchmark , simulated annealing , optimization , metaheuristics , constraint satisfaction , introduction , system , local search

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Musa2021 [1557] Details Exploring Selection Hyper-heuristics on University of Khartoum Course Timetabling Problem	7	1.00 1.00 0.98	time-tabling , timetable , automated timetabling, school timetabling, rostering	hyper heuristics , simulated annealing, heuristic selection, optimization, metaheuristics, competition, system, benchmark, model, review
Pires2021 [1725] Details Two Stage Quantum Optimization for the School Timetabling Problem	7	2.00 2.00 7.16	time-tabling , school timetabling , timetable , school timetable, automated timetabling	optimization , model , system, survey, review, metaheuristics, hybrid algorithm, introduction, hyper heuristics
Rane2021 [1799] Details Automated Timetabling System for University Course	7	2.00 2.00 2.14	timetable , time-tabling , automated timetabling	system , genetic algorithm, evolutionary algorithm, optimization, developments, review, tabu search, introduction
Widayu2021 [2274] Details Automation and Optimization of Course Timetabling Using the Iterated Local Search Hyper-Heuristic Algorithm with the Problem Domain from the 2019 International Timetabling Competition	5	4.01 4.01 5.17	time-tabling , timetable , school timetabling, examination timetabling, Course schedule	local search , hyper heuristics , optimization , competition , simulated annealing , benchmark, system, metaheuristics, model, tabu search, review, introduction, genetic algorithm
Akkan2020 [88] Details Search Space Sampling by Simulated Annealing for Identifying Robust Solutions in Course Timetabling	10	1.00 1.00 2.77	time-tabling , timetable	optimization , model , CP , simulated annealing , survey, local search, benchmark, competition, genetic algorithm, hyper heuristics, review, memetic algorithm, system
Battistutta2020 [256] Details Local Search and Constraint Programming for a Real-World Examination Timetabling Problem	13	4.00 4.00 3.17	time-tabling , examination timetabling , automated timetabling	simulated annealing , local search , model , constraint programming , survey , competition, introduction, system, optimization, memetic algorithm, CP, benchmark, hybrid algorithm
Genc2020 [818] Details A Two-Phase Constraint Programming Model for Examination Timetabling at University College Cork	19	4.00 4.00 12.60	time-tabling , examination timetabling , timetable , examination scheduling, Nurse Scheduling, automated timetabling, university timetabling, exam scheduling, school timetable	model , CP , constraint programming , system , survey, optimization, review, MIP, local search, genetic algorithm, goal programming, introduction, integer programming, developments, mathematical programming, package, hybrid algorithm

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Hoshino2020 [973] Details Optimizing Student Course Preferences in School Timetabling	17	0.00 0.00 10.15	time-tabling , timetable , school timetabling , school timetable, university timetabling, automated timetabling	optimization , model , MIP, survey, benchmark, local search, constraint programming, system, competition, integer programming, simulated annealing, tabu search, package, review, evolutionary algorithm, introduction, metaheuristics, genetic algorithm
Lemos2020 [1235] Details Minimal Perturbation in University Timetabling with Maximum Satisfiability	17	0.00 0.00 5.38	time-tabling , university timetabling , timetable , examination timetabling, automated timetabling	optimization , benchmark , competition , model , integer programming, system, CP, review, local search, constraint programming, CSP, introduction, constraint optimization
Syskov2020 [2080] Details Timetable Model for Individualization of Education Based on Multi-agent Approach	4	1.00 1.00 2.99	time-tabling , timetable , automated timetabling , university timetabling, school timetabling	system , model , integer programming, introduction, review, optimization, local search, tabu search, genetic algorithm, simulated annealing, survey
Zheng2020 [2512] Details An Improved Discrete Particle Swarm Optimization for Airline Crew Rostering Problem	7	1.00 1.00 0.89	rostering	optimization , genetic algorithm, model , system, column generation, simulated annealing, introduction, local search, mathematical programming
Zhou2020 [2554] Details Iterated Local Search with Hybrid Neighborhood Search for Workforce Scheduling and Routing Problem	8	1.00 1.00 1.39	personnel , workforce scheduling , Technician routing	local search , optimization , LNS, genetic algorithm, model , benchmark, evolutionary algorithm, integer programming, review
Castane2019 [439] Details Simulation-Based Optimization Tool for Field Service Planning	12	0.00 0.00 0.35	workforce scheduling, Dispatching technicians	model , optimization , system , survey, constraint programming, introduction, developments
Eke2019 [696] Details A Case Study of Model-Driven Engineering for Automated Timetabling	8	2.00 2.00 19.42	timetable , time-tabling , automated timetabling , examination timetabling, rostering, school timetabling	model , system , optimization, local search, developments, review, tabu search, simulated annealing, genetic algorithm, propagation, hyper heuristics, metaheuristics, package
Gong2019 [850] Details An Efficient 2D Genetic Algorithm for Optimal Shift Planning Considering Daily-Wise Shift Formats: A Case of Airport Ground Staff Scheduling	5	1.00 1.00 0.40	staff scheduling, personnel, workforce scheduling, rostering	genetic algorithm , model , system, introduction, optimization, integer programming, review, MIP, local search, metaheuristics

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Kletzander2019 [1147] Details Modelling and Solving the Minimum Shift Design Problem	18	0.00 0.00 1.58	automated timetabling, workforce scheduling, rostering, time-tabling, personnel, Nurse Rostering	model, MIP, benchmark, CP, optimization, integer programming, review, local search, constraint programming, column generation, system, large neighbourhood search, state of the art, propagation, introduction, tabu search
Kusumawar-dani2019 [1188] Details Examination Timetabling Automation and Optimization using Greedy-Simulated Annealing Hyper-heuristics Algorithm	6	6.01 6.01 7.33	time-tabling, timetable, examination timetabling , automated timetabling, school timetabling	hyper heuristics, simulated annealing, optimization, system, metaheuristics, model, benchmark, survey, review, algorithmic strategies, tabu search, introduction, genetic algorithm
Liu2019 [1360] Details Nurse scheduling problem based on hydrologic cycle optimization	8	1.00 1.00 1.91	Nurse Scheduling , rostering, Nurse Rostering, personnel, timetable, time-tabling	local search, optimization, model, memetic algorithm, mathematical programming, evolutionary algorithm, system, introduction, simulated annealing, genetic algorithm, benchmark, integer programming, tabu search, metaheuristics
Psarra2019 [1749] Details Timetable Scheduling Using a Hybrid Particle Swarm Optimization with Local Search Approach	8	2.00 2.00 6.23	timetable, time-tabling , school timetabling, university timetabling	optimization, local search, system, metaheuristics, introduction, model, tabu search, genetic algorithm, review, goal programming, hybrid algorithm
Saat2019 [1868] Details The Examination Timetabling Problem Based on Expert System: A Case Study in Malaysia	6	2.00 2.00 6.92	time-tabling, examination timetabling, timetable , examination scheduling, automated timetabling, university timetabling	system, optimization, tabu search, genetic algorithm, hyper heuristics, simulated annealing, introduction, survey, research directions, developments, review, model
Sarkar2019 [1912] Details A study of Resource Optimization for Nurse Scheduling Problem	5	1.00 1.00 6.57	Nurse Scheduling, rostering, Nurse Rostering , time-tabling, personnel, staff scheduling, automated timetabling, school timetabling, timetable	optimization, model, system, integer programming, constraint programming, survey, goal programming, mathematical programming, memetic algorithm, tabu search, review, local search, introduction, simulated annealing, constraint optimization, metaheuristics, state of the art, genetic algorithm, evolutionary algorithm, hyper heuristics, benchmark
Sinthamrongruk2019 [2012] Details Homecare staff scheduling problem using a GA based approach with local search techniques	8	1.00 1.00 1.06	Nurse Scheduling, staff scheduling, rostering, Nurse Rostering, Healthcare Scheduling, Scheduling for nurses, Scheduling staff, Homecare Scheduling	local search, model, system, genetic algorithm, optimization, metaheuristics, column generation, integer programming, memetic algorithm, benchmark, review, introduction, hyper heuristics, mathematical programming, simulated annealing
Antunes2018 [162] Details Assigning and Scheduling Service Visits in a Mixed Urban/Rural Setting	8	0.00 0.00 1.13	workforce scheduling, personnel, Maintenance Scheduling, Homecare Scheduling, Healthcare Scheduling, Dispatching technicians, Technician routing	model, optimization, MIP, CP, constraint programming, column generation, survey, review, system, genetic algorithm, constraint propagation, hybrid heuristics, propagation, metaheuristics, package, hyper heuristics

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Aziz2018 [208] Details A brief review on the features of university course timetabling problem	8	1.00 1.00 9.20	time-tabling, timetable, university timetabling, examination timetabling, automated timetabling, school timetable, Timetable construction, school timetabling	model, review, survey, system, optimization, integer programming, simulated annealing, hybrid algorithm, genetic algorithm, tabu search, memetic approach, bibliography, mathematical programming, local search, memetic algorithm, introduction
Calle-Lopez2018 [408] Details A University Administration System to Automatically Assign Courses to Teachers and Support the Design of Timetables Through Mathematical Modeling and Restrictions Analysis	6	2.00 2.00 2.27	timetable, time-tabling, examination timetabling, automated timetabling, university timetabling	system, model, competition, integer programming, package, optimization, MIP, review, simulated annealing, benchmark
Gashgari2018 [805] Details A Survey on Exam Scheduling Techniques	5	1.00 1.00 10.13	time-tabling, examination timetabling, timetable, exam scheduling, university timetabling, automated timetabling, examination scheduling	optimization, tabu search, simulated annealing, system, genetic algorithm, model, integer programming, survey, review, local search, benchmark, state of the art, introduction
Elsaka2017 [706] Details Autonomous generation of conflict-free examination timetable using constraint satisfaction modelling	10	2.00 2.00 17.61	time-tabling, timetable, examination timetabling, automated timetabling, university timetabling, examination scheduling	model, CSP, introduction, system, CP, CLP, optimization, constraint satisfaction, survey, constraint programming, benchmark, simulated annealing, constraint logic programming, hybrid algorithm, integer programming, MIP, developments, evolutionary algorithm, genetic algorithm, goal programming, research directions, review, tabu search
Nogareda2015 [1613] Details Constraint-based model design for timetabling problems in secondary schools	6	1.00 1.00 2.07	time-tabling, timetable, school timetabling, automated timetabling	model, optimization, system, benchmark, competition, evolutionary algorithm, survey, CP, constraint programming, genetic algorithm, introduction, local search, metaheuristics, review, tabu search
Santos2015 [1902] Details A Weighted Constraint Optimization Approach to the Nurse Scheduling Problem	7	2.00 2.00 3.77	Nurse Scheduling, rostering, Nurse Rostering, time-tabling, automated timetabling	competition, local search, optimization, constraint satisfaction, tabu search, constraint optimization, system, model, benchmark, introduction, simulated annealing, state of the art
Cambazard2013 [412] Details The Deployment of a Constraint-Based Dental School Timetabling System	6	2.00 2.00 4.98	time-tabling, timetable, school timetabling, university timetabling, examination timetabling, automated timetabling	system, model, introduction, constraint programming, MIP, optimization, local search, benchmark, CP, package
Koshino2013 [1164] Details Constraint propagation and Ant Colony Optimization for automated school timetabling	5	5.00 5.00 5.06	time-tabling, timetable, school timetabling, automated timetabling, school timetable, university timetabling	optimization, system, CSP, constraint satisfaction, propagation, constraint propagation, model, benchmark, metaheuristics, survey, constraint programming, hybrid algorithm, research directions

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Xu2012a [2318] Details System maintenance scheduling: Review and prospect	6	2.00 2.00 9.00	Maintenance Scheduling	system , model , optimization , review , genetic algorithm, integer programming, introduction, survey
Yang2010 [2360] Details Constraint Satisfaction Timetabling Research Based on Course-Period-Template Selection and Conflict-Vector Detection	7	1.00 1.00 3.86	time-tabling , timetable , automated timetabling, school timetabling, university timetabling	model , constraint satisfaction , CSP , propagation , constraint propagation, system , simulated annealing, tabu search, CP, competition, constraint logic programming, hyper heuristics, integer programming, introduction, local search, optimization, review, survey
Wang2009 [2253] Details Automating nurse self-rostering: A multiagent systems model	4	2.00 2.00 3.54	rostering , Nurse Scheduling , Nurse Rostering , personnel, Scheduling for nurses, staff scheduling	system , model , mathematical programming, review, research directions, survey, state of the art, column generation, tabu search, introduction
Abdullah2008 [25] Details Generating University Course Timetable Using Genetic Algorithms and Local Search	7	2.00 2.00 5.81	timetable , time-tabling , automated timetabling, examination timetabling, school timetabling, school timetable	genetic algorithm , local search , system , optimization , evolutionary algorithm, metaheuristics, survey , tabu search, simulated annealing, benchmark, model, review, introduction, hyper heuristics, developments
Chen2008 [496] Details A New Approach for Generator Maintenance Scheduling in Deregulated Power Systems	4	1.00 1.00 1.22	Maintenance Scheduling	system , optimization , integer programming, simulated annealing, introduction, package, genetic algorithm, model, tabu search
Jat2008 [1049] Details A Memetic Algorithm for the University Course Timetabling Problem	7	1.00 1.00 6.10	time-tabling , timetable , automated timetabling, rostering, Nurse Rostering, university timetabling, examination scheduling	local search , memetic algorithm , hyper heuristics , evolutionary algorithm, optimization , tabu search, genetic algorithm, model, metaheuristics, benchmark, research directions, review, introduction, hybrid algorithm, survey, developments, heuristic ordering, state of the art, system, competition
Kumarappan2008 [1183] Details Particle Swarm Optimization Based Approach to Maintenance Scheduling Using Levelized Risk Method	6	1.00 1.00 1.81	Maintenance Scheduling	system , optimization , package , introduction, genetic algorithm, COP, local search, benchmark, memetic algorithm, constraint logic programming
Noack2008 [1611] Details A simulation based optimization algorithm for slack reduction and workforce scheduling	6	1.00 1.00 0.28	workforce scheduling, workforce allocation, personnel	optimization , model , system, genetic algorithm, package, introduction, constraint satisfaction

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Tuga2007 [2159] Details A Hybrid Simulated Annealing with Kempe Chain Neighborhood for the University Timetabling Problem	6	2.00 2.00 1.33	time-tabling , timetable , examination timetabling, university timetabling	simulated annealing , system , competition, genetic algorithm, tabu search, CP, constraint programming, local search, metaheuristics, hyper heuristics, introduction, optimization, state of the art
Eshraghnia2006 [723] Details Generation Maintenance Scheduling in Power Market Based on Genetic Algorithm	6	1.00 1.00 2.24	Maintenance Scheduling	system , genetic algorithm , optimization , model, competition, introduction
Zhang2006 [2462] Details Constructing university timetable using constraint satisfaction programming approach	6	1.00 1.00 6.16	time-tabling , timetable , automated timetabling, university timetabling, school timetabling, Course schedule, Timetable construction, rostering, school timetable	model , CSP , constraint satisfaction , system , survey, tabu search, introduction, propagation, simulated annealing, constraint logic programming, genetic algorithm, local search, review
Cheng2005 [512] Details A constraint-based nurse rostering system using a redundant modeling approach	9	4.00 4.00 10.39	rostering , Nurse Rostering , timetable , Nurse Scheduling, personnel, time-tabling	model , system , CSP , constraint programming , benchmark, propagation , constraint propagation, constraint satisfaction, optimization, introduction, CLP, goal programming, mathematical programming
Morz2004 [1537] Details Genetic algorithm for rotating workforce scheduling problem	6	1.00 1.00 1.22	workforce scheduling , Nurse Scheduling, staff scheduling, time-tabling	genetic algorithm , model , tabu search , benchmark, optimization, system, metaheuristics, survey, review
Inoue2003a [1027] Details Development of nurse scheduling support system using interactive EA	5	1.00 1.00 0.70	Nurse Scheduling	system , evolutionary algorithm , genetic algorithm, introduction
Merlot2003 [1489] Details A Hybrid Algorithm for the Examination Timetabling Problem	25	2.00 2.00 11.82	timetable , time-tabling , examination timetabling , school timetabling, exam scheduling, automated timetabling, examination scheduling	simulated annealing , constraint programming , benchmark , hybrid algorithm , memetic algorithm , tabu search , optimization, system, local search, model, state of the art, evolutionary algorithm, review, constraint logic programming, developments, package
Miwa2003 [1514] Details Nurse scheduling system using bacterial evolutionary algorithm hardware	5	2.00 2.00 1.03	Nurse Scheduling	system , evolutionary algorithm , genetic algorithm, optimization, introduction, local search
Zhang2003 [2473] Details Optimizing maintenance scheduling of equipment by element maintenance interval adjustment considering system availability	6	1.00 1.00 3.27	Maintenance Scheduling	system , model, introduction

Table 3: Extracted Features for PAPER (Total 112)

Work/Title	Pages	Relevance	Rostering	CP
Anantaram2002 [148] Details Crew rostering system-An expert system for scheduling crew for Indian Airlines	8	1.00 1.00 3.86	rostering, personnel	system, model, review, benchmark, introduction
Inoue2002 [1028] Details A study on bacterial evolutionary algorithm engine for interactive nurse scheduling support system	6	2.00 2.00 0.46	Nurse Scheduling	system, evolutionary algorithm, optimization, genetic algorithm, introduction
Jan2002 [1042] Details Evolutionary algorithms for nurse scheduling problem	8	1.00 1.00 0.16	Nurse Scheduling, personnel	optimization, model, genetic algorithm, evolutionary algorithm, system, benchmark, bibliography, introduction, goal programming, mathematical programming, competition
Kawanaka2002 [1116] Details Genetic algorithm with the constraints for nurse scheduling problem	8	1.00 1.00 0.21	Nurse Scheduling, personnel	genetic algorithm, system, model, introduction, goal programming
Tanomaru2002 [2099] Details Staff scheduling by a genetic algorithm with heuristic operators	6	1.00 1.00 0.06	workforce scheduling, staff scheduling	genetic algorithm, optimization, system, introduction
Fernandes1999 [751] Details High school weekly timetabling by evolutionary algorithms	7	1.00 1.00 0.41	timetable, time-tabling, automated timetabling, Timetable construction, school timetable, university timetabling, school timetabling	genetic algorithm, simulated annealing, optimization

Bayram2025 [259] Details A Constraint Programming Model for Personnel Scheduling Problem: Application in A Factory Operating in Healthcare Sector	14	2.00 3.00 14.53	personnel , Nurse Scheduling, rostering, workforce scheduling	model , goal programming , constraint programming , integer programming, review, system, optimization, CP, column generation, MIP, constraint optimization, constraint satisfaction, introduction
Gu2025 [866] Details From Integer Programming to Machine Learning: A Technical Review on Solving University Timetabling Problems	27	4.00 10.01 181.12	time-tabling , university timetabling , timetable , examination timetabling , school timetabling, automated timetabling, exam scheduling, examination scheduling, rostering	review , integer programming , optimization , model , system , survey , metaheuristics , CP , competition , hyper heuristics , MIP, benchmark, package, simulated annealing, constraint programming, evolutionary algorithm, mathematical programming, MILP, bibliography, genetic algorithm, introduction, local search, tabu search, constraint propagation, constraint satisfaction, memetic algorithm, propagation, state of the art
Renggli2025 [1822] Details Integrating Nurse Preferences Into AI-Based Scheduling Systems: Qualitative Study	23	0.00 14.01 6.35	staff scheduling , Nurse Scheduling , personnel, rostering, Healthcare Scheduling, Nurse Rostering	review , system , MIP, CP, model , optimization , constraint programming , integer programming , genetic algorithm, package, constraint propagation, introduction, propagation, state of the art, survey
Wang2025 [2235] Details Simulation-based emergency department staffing and scheduling optimization considering part-time work shifts	13	0.00 0.00 1.01	rostering, personnel, Nurse Rostering	model , optimization , local search , system , review , integer programming, benchmark, genetic algorithm, introduction, MIP, simulated annealing, survey, state of the art, mathematical programming, metaheuristics
Lerouge2024 [1240] Details Modeling and generating user-centered contrastive explanations for the workforce scheduling and routing problem	34	1.00 3.00 1.80	workforce scheduling , Technician routing, rostering	model , system , optimization , CSP , survey , review, constraint satisfaction, local search, introduction, constraint programming
Mller2024 [1566] Details Real-world university course timetabling at the International Timetabling Competition 2019	21	1.00 3.00 26.37	time-tabling , timetable , automated timetabling , school timetabling, Timetable construction, examination timetabling, university timetabling	competition , benchmark , model , optimization , MIP, simulated annealing, survey, integer programming, introduction, metaheuristics, system
Sciau2024 [1943] Details Using constraint programming to address the operational aircraft line maintenance scheduling problem	20	1.00 1.00 12.41	Maintenance Scheduling , time-tabling , personnel, timetable	model , CP, optimization , constraint programming , MIP, column generation , review , CSP, system, benchmark, genetic algorithm, local search, package, COP, competition, constraint satisfaction, integer programming, state of the art, survey, tabu search, LNS, introduction, large neighbourhood search

Table 5: Extracted Features for ARTICLE (Total 57)

Work/Title	Pages	Relevance	Rostering	CP
Ahamad2023 [58] Details A Binary Integer Programming Model for Personnel Scheduling: A Case Study at Fast-Food Restaurant in Johor	14	2.00 3.00 8.96	personnel , staff scheduling , rostering, workforce scheduling, Nurse Rostering, workforce allocation	model , integer programming , optimization , goal programming, system, introduction, review, bibliography, developments, genetic algorithm, package, survey
Bashab2023 [245] Details Optimization Techniques in University Timetabling Problem: Constraints, Methodologies, Benchmarks, and Open Issues	24	4.00 4.00 135.68	time-tabling , university timetabling , examination timetabling , timetable , automated timetabling , rostering, school timetabling, Course schedule, exam scheduling, examination scheduling	optimization , genetic algorithm , benchmark , local search , system, metaheuristics, review, survey, simulated annealing, memetic algorithm, tabu search, hybrid algorithm , hyper heuristics , COP , evolutionary algorithm , competition, model, developments, introduction, memetic approach, algorithmic strategies, hybrid heuristics
Bulck2023 [346] Details Multi-neighbourhood simulated annealing for the ITC-2007 capacitated examination timetabling problem	16	2.00 2.00 7.08	time-tabling , examination timetabling , timetable , automated timetabling	simulated annealing , competition , benchmark , optimization , local search, hyper heuristics, review, metaheuristics, package, survey, algorithmic strategies, hybrid algorithm, integer programming, introduction, system
Bulck2023a [345] Details The international timetabling competition on sports timetabling (ITC2021)	19	1.00 1.00 22.40	time-tabling , timetable , automated timetabling , Nurse Rostering, rostering, personnel, school timetabling, university timetabling	competition , CP, model, benchmark , integer programming , optimization , constraint programming , system, metaheuristics, MILP, introduction, simulated annealing, bibliography, review
Ceschia2023a [458] Details Educational timetabling: Problems, benchmarks, and state-of-the-art results	18	1.00 1.00 55.71	time-tabling , examination timetabling , automated timetabling , school timetabling , timetable , Nurse Rostering, rostering, university timetabling	benchmark , competition , survey, local search , simulated annealing , model, review, constraint programming , optimization , system , metaheuristics, MIP, integer programming, introduction, tabu search, column generation, genetic algorithm, memetic algorithm, research directions, heuristic selection, hyper heuristics, mathematical programming, memetic approach
Mahlous2023 [1420] Details Student timetabling genetic algorithm accounting for student preferences	32	1.00 2.00 7.46	timetable , time-tabling , automated timetabling	genetic algorithm , optimization , system , simulated annealing , introduction, constraint satisfaction, developments, evolutionary algorithm, metaheuristics, integer programming, local search, research directions, review, tabu search
Antunes2020 [163] Details Assigning and Scheduling Service Visits in a Mixed Urban/Rural Setting	31	0.00 0.00 1.96	workforce scheduling, personnel, Maintenance Scheduling, Homecare Scheduling, Healthcare Scheduling, Dispatching technicians, Technician routing, Scheduling technicians	model , local search , optimization , MIP , system, CP, constraint programming , integer programming , review, column generation, survey, genetic algorithm, large neighbourhood search, metaheuristics, introduction, package, hyper heuristics

Table 5: Extracted Features for ARTICLE (Total 57)

Work/Title	Pages	Relevance	Rostering	CP
Pour2018 [1735] Details A hybrid Constraint Programming/Mixed Integer Programming framework for the preventive signaling maintenance crew scheduling problem	12	0.00 0.00 0.65	Maintenance Scheduling	MIP, model, CP, COP, CSP, constraint programming, system, optimization, propagation, integer programming, constraint optimization, constraint satisfaction, local search, benchmark, constraint propagation, genetic algorithm, hybrid algorithm, hyper heuristics, introduction, mathematical programming, survey
Rahimian2017a [1789] Details A hybrid integer and constraint programming approach to solve nurse rostering problems	12	2.00 2.00 20.83	rostering, Nurse Rostering, Nurse Scheduling, time-tabling, staff scheduling, automated timetabling, personnel	CP, hybrid algorithm, model, competition, benchmark, CSP, constraint programming, optimization, integer programming, constraint optimization, system, COP, hyper heuristics, review, column generation, constraint satisfaction, genetic algorithm, heuristic ordering, hybrid heuristics, introduction, mathematical programming, memetic algorithm, memetic approach, metaheuristics, package, research directions
Cataldo2016 [447] Details An integer programming approach to curriculum-based examination timetabling	25	2.00 2.00 22.97	time-tabling, examination timetabling, exam scheduling, timetable, automated timetabling, university timetabling, rostering, Course schedule, Nurse Scheduling, Nurse Rostering, personnel, school timetabling	model, integer programming, system, benchmark, optimization, review, hyper heuristics, simulated annealing, tabu search, metaheuristics, local search, hybrid heuristics, evolutionary algorithm, survey, introduction, competition, genetic algorithm, CP, constraint programming, state of the art, heuristic ordering, hybrid algorithm, heuristic selection, algorithmic strategies, memetic algorithm, mathematical programming
Cruz-Chvez2016 [572] Details Solving a Real Constraint Satisfaction Model for the University Course Timetabling Problem: A Case Study	14	2.00 2.00 4.37	time-tabling, timetable, university timetabling, automated timetabling, exam scheduling, examination timetabling	model, constraint satisfaction, simulated annealing, benchmark, genetic algorithm, system, optimization, evolutionary algorithm, integer programming, introduction, local search, goal programming, mathematical programming, metaheuristics
Arbaoui2015 [170] Details Preprocessing and an improved MIP model for examination timetabling	22	4.00 4.00 11.30	time-tabling, examination timetabling, automated timetabling, timetable, university timetabling	model, competition, hyper heuristics, propagation, optimization, MIP, benchmark, integer programming, review, tabu search, survey, metaheuristics, system, heuristic ordering, CSP, simulated annealing, introduction, local search, CP
Cambazard2014 [413] Details A Constraint-Based Dental School Timetabling System	11	2.00 2.00 6.17	time-tabling, timetable, school timetabling, university timetabling, automated timetabling, examination timetabling	system, model, constraint programming, MIP, optimization, introduction, competition, local search, integer programming, benchmark, developments, CP, package
Castillo-Salazar2014 [444] Details Workforce scheduling and routing problems: literature survey and computational study	29	1.00 1.00 7.68	personnel, workforce scheduling, rostering, Scheduling technicians, automated timetabling, time-tabling, workforce allocation, staff scheduling, Nurse Rostering	model, survey, MIP, optimization, integer programming, system, column generation, metaheuristics, hyper heuristics, benchmark, tabu search, review, mathematical programming, simulated annealing, CP, introduction, evolutionary algorithm, state of the art, hybrid heuristics

Table 5: Extracted Features for ARTICLE (Total 57)

Work/Title	Pages	Relevance	Rostering	CP
Bergh2013 [620] Details Personnel scheduling: A literature review	19	1.00 1.00 94.94	personnel, rostering, Nurse Rostering, staff scheduling, Nurse Scheduling, workforce scheduling, time-tabling, automated timetabling, Scheduling for nurses, Scheduling technicians, workforce allocation, timetable	model, optimization, system, review, integer programming, column generation, constraint programming, metaheuristics, genetic algorithm, local search, benchmark, survey, mathematical programming, goal programming, tabu search, competition, hyper heuristics, MILP, bibliography, simulated annealing, memetic algorithm, hybrid heuristics, MIP, introduction, heuristic ordering, constraint optimization, CP, large neighbourhood search, state of the art
Hiermann2013 [957] Details Metaheuristics for solving a multimodal home-healthcare scheduling problem	25	1.00 1.00 2.24	Healthcare Scheduling, rostering, Nurse Rostering, time-tabling, Homecare Scheduling	CP, metaheuristics, local search, simulated annealing, hyper heuristics, model, system, optimization, memetic algorithm, constraint programming, tabu search, introduction, evolutionary algorithm, integer programming, genetic algorithm, review, hybrid heuristics, hybrid algorithm, state of the art
Haspelslagh2012 [928] Details The first international nurse rostering competition 2010	16	2.00 2.00 9.99	rostering, Nurse Rostering, time-tabling, staff scheduling, Nurse Scheduling, automated timetabling	competition, model, benchmark, hyper heuristics, optimization, COP, developments, local search, constraint optimization, system, mathematical programming, tabu search, genetic algorithm, integer programming, review, constraint programming, simulated annealing, state of the art, introduction
He2012 [936] Details A constraint programming based column generation approach to nurse rostering problems	13	4.00 4.00 16.58	rostering, Nurse Rostering, personnel, Nurse Scheduling, Scheduling for nurses, Scheduling staff, timetable	CP, model, constraint programming, column generation, benchmark, propagation, optimization, integer programming, metaheuristics, constraint optimization, constraint satisfaction, genetic algorithm, system, heuristic ordering, hybrid heuristics, introduction, local search, package, research directions, review, survey
Brucker2011 [329] Details Personnel scheduling: Models and complexity	7	1.00 1.00 7.18	personnel, rostering, Nurse Rostering, time-tabling, staff scheduling, automated timetabling, Nurse Scheduling, Scheduling for nurses	model, optimization, local search, tabu search, review, introduction, competition, mathematical programming, survey, bibliography, state of the art
Cambazard2010 [411] Details Local search and constraint programming for the post enrolment-based course timetabling problem	25	2.00 2.00 20.67	timetable, time-tabling, university timetabling, automated timetabling	model, local search, CP, competition, LNS, constraint programming, benchmark, optimization, large neighbourhood search, propagation, system, introduction, metaheuristics, simulated annealing, survey, constraint propagation, developments, hybrid algorithm, mathematical programming, review, tabu search
L2010 [1410] Details Adaptive Tabu Search for course timetabling	10	1.00 1.00 5.13	time-tabling, timetable, university timetabling	competition, tabu search, local search, survey, evolutionary algorithm, optimization, metaheuristics, simulated annealing, benchmark, model, system, constraint satisfaction, review, introduction, mathematical programming, hybrid algorithm
Qu2008 [1769] Details A survey of search methodologies and automated system development for examination timetabling	35	4.00 4.00 346.75	time-tabling, examination timetabling, automated timetabling, timetable, university timetabling, rostering, examination scheduling, Timetable construction, school timetabling, Nurse Rostering, school timetable	system, benchmark, tabu search, model, hyper heuristics, local search, genetic algorithm, optimization, simulated annealing, memetic algorithm, survey, review, constraint programming, constraint satisfaction, metaheuristics, evolutionary algorithm, bibliography, competition, package, research directions, large neighbourhood search, constraint logic programming, developments, introduction, heuristic selection, heuristic ordering, state of the art, integer programming, CSP, algorithmic strategies, hybrid heuristics, hybrid algorithm, mathematical programming, constraint propagation, propagation

Table 5: Extracted Features for ARTICLE (Total 57)

Work/Title	Pages	Relevance	Rostering	CP
Burke2007 [377] Details A graph-based hyper-heuristic for educational timetabling problems	16	1.00 1.00 35.00	time-tabling , automated timetabling , timetable , rostering , examination timetabling, Nurse Rostering, personnel, university timetabling, school timetabling	hyper heuristics , tabu search , local search , benchmark , model , system , genetic algorithm , metaheuristics, optimization, constraint satisfaction, state of the art, evolutionary algorithm, introduction, survey, simulated annealing, developments, algorithmic strategies, research directions, review, memetic algorithm, large neighbourhood search
Lewis2007 [1252] Details A survey of metaheuristic-based techniques for University Timetabling problems	24	2.00 2.00 73.44	time-tabling , timetable , automated timetabling , university timetabling , examination timetabling , school timetabling, Timetable construction, examination scheduling, rostering, school timetable	optimization , survey , competition , metaheuristics , tabu search , simulated annealing , genetic algorithm , review , local search , system , benchmark , evolutionary algorithm , integer programming, introduction, hyper heuristics, constraint programming, model, constraint logic programming, memetic algorithm, hybrid algorithm, memetic approach, algorithmic strategies, research directions, developments
Simonis2007 [2007] Details Models for Global Constraint Applications	30	0.00 0.00 11.07	personnel , rostering , Nurse Rostering , Nurse Scheduling, time-tabling, university timetabling	model , system , constraint programming , CP , propagation , optimization , constraint logic programming , constraint propagation , introduction, constraint satisfaction, package, CLP, survey, metaheuristics
Burke2006a [384] Details Case-based heuristic selection for timetabling problems	18	1.00 1.00 42.03	time-tabling , timetable , automated timetabling , examination timetabling , rostering , Nurse Rostering, university timetabling, Timetable construction, personnel, staff scheduling, school timetabling	system , heuristic selection , tabu search , hyper heuristics , model , metaheuristics, optimization, genetic algorithm, constraint logic programming, benchmark, developments, introduction, simulated annealing, survey, constraint satisfaction, package, state of the art, evolutionary algorithm, review, algorithmic strategies, research directions
Trilling2006 [2152] Details Nurse scheduling using integer linear programming and constraint programming	6	1.00 1.00 0.00		
Azaiez2005 [204] Details A 0-1 goal programming model for nurse scheduling	17	2.00 2.00 5.95	Nurse Scheduling , personnel	model , system , survey , goal programming , optimization, package, integer programming, introduction, review, mathematical programming
Bard2005 [241] Details Preference scheduling for nurses using column generation	25	1.00 1.00 3.21	Nurse Scheduling , personnel , rostering, Nurse Rostering, Scheduling for nurses	model , column generation , system , tabu search , integer programming, optimization, constraint satisfaction, mathematical programming, review, genetic algorithm, introduction, goal programming, developments, constraint programming, metaheuristics
Aickelin2004 [79] Details An indirect Genetic Algorithm for a nurse-scheduling problem	18	1.00 1.00 2.15	Nurse Scheduling , time-tabling, rostering, Nurse Rostering, personnel, automated timetabling, timetable	genetic algorithm , optimization , tabu search , system , integer programming, review, local search, model, evolutionary algorithm, developments, package, metaheuristics, introduction, survey

Table 5: Extracted Features for ARTICLE (Total 57)

Work/Title	Pages	Relevance	Rostering	CP
Burke2004 [362] Details The State of the Art of Nurse Rostering	59	2.00 2.00 334.42	rostering, personnel, Nurse Rostering, Nurse Scheduling, time-tabling, automated timetabling, staff scheduling, workforce scheduling, timetable, examination timetabling, exam scheduling, Scheduling staff	model, system, state of the art, genetic algorithm, review, goal programming, tabu search, local search, mathematical programming, optimization, metaheuristics, constraint satisfaction, integer programming, constraint programming, survey, research directions, package, benchmark, evolutionary algorithm, simulated annealing, memetic approach, developments, constraint logic programming, propagation, bibliography, constraint optimization, constraint propagation, introduction, memetic algorithm, MIP, column generation
Daskalaki2004 [596] Details An integer programming formulation for a case study in university timetabling	19	2.00 2.00 23.94	time-tabling, timetable, university timetabling, school timetabling, automated timetabling, Timetable construction, examination timetabling, Course schedule	model, system, integer programming, optimization, introduction, genetic algorithm, mathematical programming, tabu search, MIP, review, package, survey, goal programming, evolutionary algorithm, bibliography, developments, competition, propagation
Ernst2004 [721] Details Staff scheduling and rostering: A review of applications, methods and models	25	4.00 4.00 98.24	rostering, personnel, Nurse Scheduling, timetable, Nurse Rostering, workforce scheduling, time-tabling	model, system, optimization, review, CP, survey, column generation, mathematical programming, metaheuristics, genetic algorithm, local search, tabu search, simulated annealing, integer programming, package, goal programming, constraint logic programming, constraint programming, developments, introduction, constraint propagation, propagation, state of the art, bibliography, memetic approach
Ernst2004a [719] Details An Annotated Bibliography of Personnel Scheduling and Rostering	124	2.00 2.00 970.42	rostering, personnel, Nurse Scheduling, staff scheduling, Nurse Rostering, workforce scheduling, time-tabling, timetable, Scheduling staff, workforce allocation, automated timetabling, Scheduling for nurses	model, system, column generation, optimization, integer programming, bibliography, review, genetic algorithm, constraint programming, mathematical programming, local search, goal programming, tabu search, CLP, simulated annealing, constraint logic programming, metaheuristics, package, evolutionary algorithm, developments, survey, constraint satisfaction, MILP, introduction, propagation, hyper heuristics, benchmark, CP, state of the art, competition, research directions, memetic algorithm, memetic approach, MIP, CSP, constraint propagation, constraint optimization
Burke2003a [372] Details A Tabu-Search Hyperheuristic for Timetabling and Rostering	20	4.00 4.00 22.04	time-tabling, rostering, Nurse Scheduling, Nurse Rostering, automated timetabling, examination timetabling, personnel	hyper heuristics, tabu search, system, optimization, metaheuristics, genetic algorithm, local search, competition, benchmark, state of the art, survey, constraint satisfaction, bibliography, heuristic selection, memetic approach, introduction, memetic algorithm, simulated annealing
Cheang2003 [478] Details Nurse rostering problems—a bibliographic survey	14	2.00 2.00 16.18	Nurse Scheduling, rostering, Nurse Rostering, personnel, time-tabling, workforce scheduling	model, system, optimization, CSP, constraint satisfaction, survey, package, metaheuristics, genetic algorithm, constraint logic programming, mathematical programming, memetic algorithm, constraint propagation, constraint programming, propagation, tabu search, benchmark, CP, simulated annealing, introduction, memetic approach, CLP, review, goal programming, hybrid algorithm, column generation, constraint optimization, integer programming, bibliography, local search
Valouxis2003 [2180] Details Constraint programming approach for school timetabling	18	2.00 2.00 11.65	time-tabling, timetable, school timetabling, Timetable construction, automated timetabling, examination timetabling, school timetable	model, CP, local search, system, constraint programming, optimization, CSP, column generation, constraint propagation, introduction, propagation, review, simulated annealing, tabu search, CLP, bibliography, constraint satisfaction, integer programming, survey

Table 5: Extracted Features for ARTICLE (Total 57)

Work/Title	Pages	Relevance	Rostering	CP
Burke2002 [383] Details Recent research directions in automated timetabling	15	2.00 2.00 20.78	time-tabling , timetable , automated timetabling , university timetabling, examination timetabling, Timetable construction, examination scheduling, rostering	system , memetic algorithm , optimization , genetic algorithm , survey, hyper heuristics, tabu search, evolutionary algorithm, introduction, research directions, model, metaheuristics, simulated annealing, developments, memetic approach, algorithmic strategies, review, heuristic ordering, local search, integer programming, hybrid heuristics, state of the art
Isaai2001 [1033] Details Hybrid applications of constraint satisfaction and meta-heuristics to railway timetabling: a comparative study	9	2.00 2.00 1.99	timetable , time-tabling, automated timetabling	model , system , tabu search , constraint satisfaction , simulated annealing , metaheuristics , propagation , optimization , review, CSP, constraint propagation, genetic algorithm, survey, hybrid algorithm, competition, constraint logic programming, constraint programming, introduction, local search, mathematical programming
Simonis2000 [2008] Details Constraint Handling in an Integrated Transportation Problem	7	0.00 0.00 0.06	personnel	system , model , constraint programming, propagation, constraint propagation, introduction, CP, integer programming, optimization
Deris1999 [631] Details Incorporating constraint propagation in genetic algorithm for university timetable planning	13	2.50 2.50 3.38	timetable , time-tabling , automated timetabling, school timetabling	genetic algorithm , system , optimization , propagation , constraint propagation , hybrid algorithm, model, constraint satisfaction, introduction, CSP, constraint programming
Frost1999 [782] Details Maintenance scheduling problems as benchmarks for constraint algorithms	22	1.00 1.00 4.29	Maintenance Scheduling	constraint satisfaction , CSP , optimization , system , benchmark, model, genetic algorithm, hybrid algorithm, introduction, local search, simulated annealing, tabu search
Schaerf1999 [1924] Details A Survey of Automated Timetabling	41	2.00 2.00 82.00	time-tabling , timetable , automated timetabling , school timetabling , examination timetabling , school timetable, Timetable construction, university timetabling, exam scheduling, Course schedule, examination scheduling	system , optimization , survey , tabu search , genetic algorithm , simulated annealing , model , constraint logic programming , local search , CLP , integer programming, research directions, introduction, bibliography, constraint satisfaction, mathematical programming, goal programming, review, constraint programming, benchmark, evolutionary algorithm, competition, state of the art
Dowland1998 [665] Details Nurse scheduling with tabu search and strategic oscillation	15	1.00 1.00 0.33	Nurse Scheduling, rostering, time-tabling, personnel, staff scheduling	tabu search , system , local search , simulated annealing , introduction, optimization, developments, model, integer programming, metaheuristics
Jaumard1998 [1052] Details A generalized linear programming model for nurse scheduling	18	1.00 1.00 2.58	Nurse Scheduling , personnel , staff scheduling	model , system , column generation , mathematical programming, survey, goal programming, review, metaheuristics, introduction, developments, state of the art, optimization
Cheng1997 [511] Details A nurse rostering system using constraint programming and redundant modeling	11	6.01 6.01 28.76	rostering , Nurse Rostering , timetable , Nurse Scheduling , personnel, school timetabling, time-tabling	model , system , CSP , constraint programming , propagation , constraint satisfaction , constraint propagation , benchmark, CLP, constraint logic programming, introduction, mathematical programming, goal programming, hybrid algorithm, optimization

Table 5: Extracted Features for ARTICLE (Total 57)

Work/Title	Pages	Relevance	Rostering	CP
Boizumault1996 [308] Details Constraint logic programming for examination timetabling	17	2.00 2.00 4.45	time-tabling , examination timetabling , examination scheduling, timetable, school timetabling	constraint logic programming , system , CLP , model , tabu search , constraint satisfaction , optimization , survey , introduction , local search , CSP , constraint programming , integer programming , propagation , review
Weil1995 [2265] Details Constraint programming for nurse scheduling	6	1.00 1.00 1.00	Nurse Scheduling , personnel , staff scheduling	system , model , constraint programming , propagation , CSP , goal programming , constraint satisfaction , review , mathematical programming
Satoh1991 [1918] Details Maintenance scheduling by using simulated annealing method (for power plants)	8	1.00 1.00 1.96	Maintenance Scheduling	system , simulated annealing , optimization , integer programming , model , survey , package , introduction
Dopazo1975 [658] Details Optimal generator maintenance scheduling using integer programming	9	1.00 1.00 0.39	Maintenance Scheduling , personnel	system , integer programming , optimization , model , survey , mathematical programming , introduction

10 Acronyms

Table 14: Acronym Concepts

Acronym	Type	Description
CLP	CP	Constraint Logic Programming
COP	CP	Constraint Optimization Problem
CP	CP	Constraint Programming
CSP	CP	Constraint Satisfaction Problem
LNS	CP	Large Neighbo[u]rhood Search
MILP	CP	Mixed Integer Linear Programming
MIP	CP	Mixed Integer Programming

11 Concept Matching

In order to automatically find out properties of the articles, we try to find certain concepts in the pdf versions of the articles. We manually defined an ontology of important concepts to look for, and defined regular expressions that would recognize these concepts in the text. We use the *pdgrep* command to search for the number of occurrences of certain regular expressions in the files. This often clearly identifies the constraints used in the model. We group the results by number of occurrences of the concept in the text of the work. Note that this is only approximate, as we do include the full pdf file in the search. A concept might only be mentioned in some of the title of citations used in the paper, we do count them in our results, as we were not able to remove the bibliography from the main body of the work.

Overall, if a work is not mentioned as using the concept, the the text does not contain a match to the corresponding regular expression. A fundamental limitation of this approach is that it only really works for text written in the language the regular expressions are designed for (in our case English), and not those written in another language. We could overcome this limitation by defining all concepts in other languages as well, and then using a language flag to identify the language the text is written in.

Note that we only show the first 30 matching entries in each concept category, and list the total number of matches if there are more than 30 matches.

11.1 Concept Type Rostering

A Papers and Articles Missing a Local Copy

This section lists all papers and articles for which we were not able to locate an electronic copy that we could download to our system. This might be because the work is behind a paywall for which we do not have access, or since the paper only exists in hardcopy, for works from the start of the period covered. As in either case we are not able to extract useful information from the work, either automatically, or manually, without the actual text itself, these gaps should be closed where possible.

Some journals are highlighted in red, indicating that I cannot read these through our library. This helps to avoid repeatedly checking whether I can access the papers via the publication URL. The highlighting is controlled by the blocked.json file in the imports/ directory.

Table 17: PAPER without Local Copy (Total 297)

Key/URL	Authors	Title	Relevance	Year	Conference /Journal	Cite
